DIGITALAIKART

FOR INDIAN BPO, CHAT AND EMAIL SUPPORT TEAMS

AI Reply Desk

The Customer Support Prompt Kit
56 ready prompts · 8 templates · a 30-day plan

Reply drafting | Escalations | Hinglish & Hindi | QA & coaching | Career moves

Written for the agent on the floor, not the manager above it.

- 56 prompts that paste into any approved AI tool — ChatGPT, Claude, Gemini or your company's own assistant
- Every statistic sourced and dated. Nothing invented, nothing out of date
- Built for Indian channels: WhatsApp, chat, email and voice-note follow-ups

2026-27 EDITION

Every statistic sourced and checked on 12 November 2026

START HERE

Read this page before you copy a single prompt

This kit is built for one person: the agent on the floor right now — the one handling 80 chats a shift, getting scored on quality, and being told that AI is either going to replace the desk or save it. Nobody has told you exactly *how* to use it without getting flagged. That is what these pages do.

What is inside

- **Part 1 — The 2026 desk, in numbers.** What actually changed in Indian support hiring this year, from sources you can check yourself. No motivational filler.
- **Part 2 — Tool setup in 15 minutes.** Which free AI tool fits which desk task, what each free plan really allows as of November 2026, and the data rule that keeps you out of trouble.
- **Part 3 — The 6-block prompt skeleton.** The structure every prompt in this kit uses, so you can write your own for cases we did not cover.
- **Parts 4 to 9 — 56 ready prompts** across six modules: reply drafting, angry customers and escalations, language and tone, speed tools, quality and coaching, career moves.
- **Part 10 — 8 fill-in templates** you can print or paste into your notes app.
- **Part 11 — Metrics and red flags.** What your scorecard measures, and the 15 AI habits that get agents pulled up.
- **Part 12 — The 30-day plan.** Four weeks, roughly 20 minutes a day, ending with something you can show your TL.

The three rules that make this kit work

1 **Never let the AI invent a fact.**

Dates, refund amounts, policy clauses, warranty terms, compensation — all of it comes from your system or your SOP. The AI only writes. Every prompt here ends with an instruction to list missing facts instead of guessing. Keep that line in even when you rewrite the prompt.

2 **Paste less than you think you need.**

You need the customer's problem and your own facts. You do not need their full name, phone number, address, card digits or order value. Strip them. Part 2 gives you the exact strip-list and a redaction prompt.

3 **The AI drafts. You send.**

Read every line before it goes out. Change at least the first sentence and the last sentence to your own words — this is what separates an agent who is faster from an agent who sounds like a machine, and quality auditors can tell the difference within two replies.

Contents at a glance

Part	What it gives you
1	The 2026 desk in numbers — what changed in Indian support hiring, and what to do about each shift
2	Tool setup in 15 minutes — which free AI tool for which desk task, and the data strip-list
3	The 6-block prompt skeleton, so you can write your own for cases this kit does not cover
4	Module 1: reply drafting — 12 prompts from delayed orders to stuck KYC (P3-P14)
5	Module 2: angry customers and escalations — 9 prompts including legal threats and abuse boundaries (P15-P23)
6	Module 3: language and tone — 8 prompts for Hinglish, Hindi and five more Indian languages (P24-P31)
7	Module 4: speed tools — 9 prompts for threads, handovers, macros, dispositions and KB articles (P32-P40)
8	Module 5: quality and coaching — 8 prompts to audit your own work before the auditor does (P41-P48)
9	Module 6: career moves — 8 prompts for the transfer, the résumé, the interview and the ask (P49-P56)
10	Eight fill-in templates — case fact sheet, pre-send check, handover, macro card and more
11	Metrics and red flags — the six dashboard numbers, and 15 AI habits that get agents pulled up
12	The 30-day plan — twenty minutes a day, ending with an artefact you can show your TL
13	Sources and verification — every external claim, with where it came from and when it was checked

How to use a prompt from this kit: open the prompt, replace everything inside [SQUARE BRACKETS] with your real facts, delete any line that does not apply, paste into your approved AI tool, then edit the reply. If your company blocks AI tools on the floor, this kit still works — use it on your own phone during break to prepare replies, learn the patterns, and build the macros you will save in your own system.

PART 1

The 2026 desk, in numbers

What changed in Indian customer support this year — and what it means for the seat you are sitting in

Most AI advice for support teams is written by people who have never taken a call. This part is different: it is only the numbers that were published in the last few months, and one line after each on what you should do about it. Check the sources yourself — they are listed in Part 13.

1.1 Hiring has not stopped. It has moved sideways.

Domestic BPO hiring demand in India grew about 12% year on year in the first half of FY27 — but the growth is not evenly spread. Chat and non-voice support roles grew around 38%, while voice and blended roles grew about 6%. That single pair of numbers is the most important thing in this book: the work is shifting from the phone to the keyboard, and the keyboard is where AI help is easiest to apply and easiest to be measured on.

What to do: if you are on voice, ask for a chat or email cross-training this quarter. The demand is already there; the ask is on you.

1.2 Employers are naming skills, not "good communication".

In the same hiring data, mentions of *chat quality control* in job posts rose about 246% year on year, *voice modulation* about 191%, inbound process requirements about 172% and outbound about 148%. Persuasion requirements rose about 57%, customer handling about 48% and complaint handling about 33%. At the same time, generic phrases like "good communication skills" and "basic computer knowledge" are appearing less.

What to do: your CV and your internal profile should use those exact words — chat quality, complaint handling, escalation ownership — with a number attached. Part 9 gives you the prompt that rewrites your résumé bullets this way.

1.3 Regional language is now a premium, English is not.

Job posts asking for Hindi, Kannada, Tamil, Telugu, Marathi or Bengali rose roughly 81% year on year, while posts requiring English fell about 32%. In production, more than a third of contact centres surveyed in the Nasscom–Krisp Voice AI Readiness 2026 report support at least three Indian languages.

What to do: if you speak a second Indian language, that is a raise, not a footnote. If you speak only English, learn to produce a clean Hindi or Hinglish reply with AI supervision — Module 3 of this kit is built for exactly that, and it is honest about where machine translation still fails.

1.4 Voice AI is in production, but not everywhere.

The Nasscom–Krisp report (released 8 October 2026, more than 140 organisations surveyed) found about 31% of organisations at limited production with voice AI, and roughly 13% that had scaled it across several

customer journeys. 61% reported cutting cost per eligible interaction by more than 20%. Enterprise-wide use is still early — which is why your desk still has queues.

What to do: the calls that remain are the ones automation fails at: angry customers, multi-issue complaints, money disputes, anything with an emotional edge. Those are the calls this kit prepares you for.

1.5 The role you are being moved into already has a name.

Industry workforce analysis describes the shift in plain terms: the *voice agent* role evolves into a *conversational AI copilot* — working with real-time dialogue systems and prompt writing — and the *customer support analyst* evolves into a *CX insights analyst*, working with journey analytics and behaviour modelling. Both new descriptions put prompt writing or data reading at the centre.

What to do: pick one of the two directions within the next 60 days. Module 6 gives you the exact language for the internal move.

1.6 The anxiety is real, and it is mostly a training gap.

In Nasscom's AI talent research, 42% of employees said they feel anxious about AI disrupting their jobs, and about 65% said they are learning, lack confidence, or have no exposure to AI tools at all. Roughly 73% of those learning do it through self-driven channels. Employers also reported that 40% of them now prefer demonstrable AI skills over a degree.

What to do: self-driven is the norm, which means a documented 30-day self-driven plan is a legitimate thing to put in front of your manager. That is Part 12. Finish it, screenshot it, attach it.

1.7 Why agents hesitate — and what it costs

A survey of 1,002 AI users published in November 2026 found 67% feel unsure how to word a prompt, 38% hesitate at least once a week, and 27% said writing the right prompt took longer than doing the task themselves. The sample is American, so treat it as a direction, not an Indian statistic. The pattern matches what you see on any floor: people try AI twice, get a robotic answer, and stop.

What to do: the fix is structure, not talent. Part 3 gives you the six lines that remove most of the hesitation. After two weeks of using them, you will not rewrite a prompt more than once.

> **The one-line summary of this part:** the desk is not disappearing — it is splitting into routine work that gets automated and judgement work that gets paid better. Everything in this kit pushes you toward the second pile.

PART 2

Tool setup in 15 minutes

Which AI tool to open, what the free plans actually give you, and the data rule that protects your job

2.1 Use what your company approves. Then use the rest privately.

Two different jobs, two different rules. Work you will paste into a ticket or CRM must go through a tool your employer has approved — many BPOs and GCCs now run their own internal assistants, and using a personal account for live customer data is a disciplinary issue in most contracts, not a grey area. Learning, practice, macro writing and career work can happen on a personal account, on your own phone, with no customer data in it.

Every prompt in this kit is written so it works in both situations. Nothing here requires an enterprise tool.

2.2 The free plans, checked in November 2026

Free tiers change every few months, so here is the state of play as it stood at the start of November 2026. Re-check the vendor's pricing page before you rely on a limit.

Tool	What the free plan gives you	Best desk use
ChatGPT (Free)	Unlimited everyday text chats on GPT-6, with search and limited memory. Uploads, image creation, voice and deep research are capped.	Fast reply drafting and rewrites. Best all-rounder when you do not know which tool to open.
Claude (Free)	Sonnet and Haiku models, up to five projects, web search, file creation, artifacts. Usage limits reset on a rolling five-hour window. No image generation.	Long, careful writing: tone-sensitive replies, escalation letters, policy summaries. Follows "keep it formal but warm" style instructions most reliably.
Gemini (Free)	Flash-Lite model, Deep Research, image generation and editing, Gemini Live, Canvas, Gems, 15 GB storage. Compute-based limits that refresh every five hours up to a weekly cap.	Reading long threads and attachments, summarising a 40-message case, anything inside Gmail or Google Docs.
Microsoft Copilot (free app)	Chat in the standalone app. Copilot inside Word, Excel, PowerPoint and Outlook requires a Microsoft 365 subscription.	Only useful on the floor if your company already runs Microsoft 365 — check before assuming.

2.3 The one setting to change

Turn off chat history and model training wherever the tool offers it, and prefer incognito or temporary chats for anything work-related. On the free tiers this is usually a toggle in settings, and on Claude there is an incognito mode. It is not a complete guarantee — nothing on a consumer tool is — but it is the difference between careless and deliberate.

2.4 The strip-list: what never goes into a prompt

Under India's Digital Personal Data Protection framework, the company is the data fiduciary and you are handling someone else's personal data on its behalf. The DPDP Rules 2025 were notified on 13 November 2025; the consent-manager provisions start on 13 November 2026 and the full set of data fiduciary obligations, along with the penalty schedule, apply from 13 May 2027. That date is not a reason to relax — the practical rule for an agent is simple and does not depend on which phase is live.

NEVER PASTE

- Full name, phone, email, address
- Aadhaar, PAN, passport, DL numbers
- Card numbers, CVV, UPI IDs, bank account numbers
- Order value, invoice totals, salary or EMI figures
- Medical details or diagnosis in a health process
- Any screenshot showing the customer's dashboard

USE INSTEAD

- "the customer" or "C1"
- "order placed 14 days ago"
- "payment of about Rs 2,000"
- "item arrived damaged"
- "the courier's last scan was 6 days ago"
- "the customer is on a premium plan"

Names and identifiers are re-inserted by you at the end, in the system, where they belong. The AI does not need them to write a good reply.

2.5 Prompt 1 — the redaction pass

If you already have a thread that contains personal data and you need to work on it, run this first. It is the only prompt in the kit that touches raw text.

P1 · Redact before you paste

```
You are a data-minimisation assistant. I will paste a customer conversation. Rewrite it with every piece of personal or financial data replaced by a neutral token, and nothing else changed.

Replace: names with [NAME], phone numbers with [PHONE], emails with [EMAIL], addresses with [ADDRESS], government ID numbers with [ID], card and bank numbers with [ACCOUNT], order and ticket IDs with [REF], and any money amount with a rounded band like [AMOUNT ~2K].

Keep: the sequence of events, the customer's emotional tone, product or service names, dates stated as relative time ("6 days ago"), and what the customer is asking for.

Output only the rewritten conversation. Then add a line at the end: "Removed: " and list the categories you replaced, with counts. Do not add advice, commentary or a reply.
```

Use it on your personal device only, and only if your company permits external tools for that data at all. When in doubt, type the facts by hand instead.

PART 3

The 6-block prompt skeleton

Every prompt in this kit is built from these six blocks. Learn them once and you can write your own

An AI reply goes wrong for six reasons, and each one is fixed by a block. Write them in this order — the order matters, because the model reads top-down.

1 **Role**

Who the model is and who it writes for. "You are a senior support agent for an Indian D2C brand writing to a customer on WhatsApp." Vague roles produce corporate mush.

2 **Facts**

The bullet list of what actually happened, in your words, with no personal data. Only facts here. If a fact is unknown, write UNKNOWN — do not leave it out, because the model will fill the gap.

3 **Customer state**

Angry, anxious, confused, repeating a complaint, first contact, third follow-up. This single line changes the entire tone of the output more than any style instruction.

4 **Constraints**

Length, channel, what you may and may not offer, banned phrases, formality level, language. Be numeric: "90-130 words", not "short".

5 **Output shape**

Number the parts you want — acknowledgement, what happened, next step, question. A shape stops the model from writing three paragraphs of apology.

6 **Check**

The line that saves your scorecard: "If any fact I need is missing, list it under NEED FROM SYSTEM instead of guessing." Never delete this block.

3.1 The blank skeleton

P2 · Your own prompt, in six blocks

```
ROLE
You are a [ROLE] for [COMPANY TYPE], writing to a customer on [CHANNEL].

FACTS
- [What happened, step by step, no personal data]
- [Current status / last known state]
- [What the customer is entitled to under our SOP: [POLICY LINE]]
- UNKNOWN: [anything you genuinely do not know]

CUSTOMER STATE
[Angry / anxious / confused / first contact / third follow-up]. [One line on why.]

CONSTRAINTS
- [90-130] words, [formal / warm-professional / plain]
- Language: [English / Hinglish / Hindi]
- Do not use: "valued customer", "sorry for the inconvenience", "we apologise for any inconvenience caused",
emoji, exclamation marks
- Do not promise anything not written in FACTS
- Do not invent dates, amounts or policy

OUTPUT
1. One-line acknowledgement that names the actual problem
2. What happened, plain language, from FACTS only
3. The next step, with the exact action and timing
4. One question, only if a fact is genuinely missing
5. Sign-off with [MY NAME] and [TICKET REF]

CHECK
If any fact needed for a complete answer is missing, do not guess. List it under NEED FROM SYSTEM at the
end.
```

3.2 Five edits that fix a bad output

What went wrong	The edit
Too long, three paragraphs of apology	Add: "Cut it to 100 words. Delete every sentence that does not give information or a next step."
Sounds like a template	Add: "Rewrite so the first sentence is specific to this case. No sentence may start with 'We'."
Invented a date or amount	Add: "You added a fact I did not give. Remove it and list it under NEED FROM SYSTEM."
Too cold / too soft	Change block 3 only. "Anxious, third follow-up, has already been promised a callback twice" produces a different reply than "angry".
Wrong language mix	Add: "Hinglish, but all product names, amounts, dates and policy terms stay in English. No Devanagari script."

> **Save your own:** once a prompt works, store it in your notes app with the module number in front. After a month you will have a personal set of 15 that covers 80% of your shift, and you will stop rewriting from scratch.

PART 4 · MODULE 1

Reply drafting

12 prompts for the cases that fill your queue — from a delayed order to a stuck KYC

Each prompt follows the six-block skeleton. Replace the bracketed facts, delete lines that do not apply, and always read the draft before sending. Where a prompt says "per [POLICY]", paste the actual line from your SOP — the model must never decide compensation on its own.

P3 Delayed order — first reply

When the courier has missed the promised date and this is your first response.

```
You are a senior support agent for [COMPANY], an Indian [CATEGORY] company. Write the first reply to a
customer whose order is late.

FACTS
- Order placed [X] days ago; promised delivery was [Y] days ago
- Courier's last scan: [STATUS, e.g. "in transit at local hub for 4 days"]
- New expected date: [DATE or UNKNOWN]
- Customer is on [NEW / REPEAT / PREMIUM] tier
- We may offer: [POLICY LINE — or "nothing beyond an apology and tracking"]

CUSTOMER STATE
Frustrated, first contact, has checked tracking themselves.

CONSTRAINTS
- 90-130 words, warm-professional, English
- No "sorry for the inconvenience", no exclamation marks, no emoji
- Do not state a new delivery date unless I gave you one

OUTPUT
1. One line that names the real problem (the package has not moved)
2. What the tracking shows, in plain language
3. The next step with a specific timing ("I have raised a trace with the courier; you will hear from me by
tomorrow 6 pm")
4. One question only if needed
5. Sign-off with [MY NAME], ticket [REF]

CHECK
If I wrote UNKNOWN for the date, offer a trace and a callback slot instead of a date. List any other missing
fact under NEED FROM SYSTEM.
```

P4 Damaged or broken item — replacement path

When the customer sends a photo of a damaged delivery and wants a replacement.

```
You are a support agent for [COMPANY]. A customer received a damaged item and has sent photos. Write the
reply that moves them to a replacement without arguing.

FACTS
- Item: [PRODUCT CATEGORY, no brand model needed]
- Damage described by customer: [DESCRIPTION]
- Photos received: [YES / NO]
- Replacement window: [X] days from delivery, per [POLICY LINE]
- Pickup for the damaged unit: [YES, courier will collect / NO, customer keeps it]

CUSTOMER STATE
Annoyed, expects a fight, has already said "I want a refund, not a replacement".

CONSTRAINTS
- 100-140 words, plain and direct
- Do not ask for photos again if I wrote YES
- Do not apologise more than once
- Do not promise a refund if the SOP is replacement-first; explain the order of steps instead

OUTPUT
1. Confirm what you can see in the photos, in one sentence
2. What happens next: replacement dispatch, pickup, or both — with timing
3. What the customer has to do (one action maximum)
4. What happens if the replacement is also damaged
5. Sign-off with [MY NAME], ticket [REF]

CHECK
Never invent a replacement window or a pickup rule. If the policy line is missing, list it under NEED FROM
SYSTEM.
```

P5 Refund status — money already deducted

The highest-risk queue in any Indian support desk. Use this every time.

```
You are a payments-savvy support agent for [COMPANY]. The customer says money was deducted but the order
failed or was cancelled, and is asking where the refund is.

FACTS
- Payment mode: [UPI / CARD / NET BANKING / WALLET]
- Refund initiated on: [DATE, or NOT YET]
- Refund reference: [REF or NOT AVAILABLE]
- Standard timeline per [POLICY LINE]: UPI [X] working days, card [Y] working days
- Bank involved: [BANK NAME or "the customer's bank"]

CUSTOMER STATE
Anxious and suspicious — believes the company has taken the money.

CONSTRAINTS
- 90-130 words, calm and factual
- Explain that the money has left the customer's account but the refund is processed by the bank, without
sounding like blame-shifting
- No vague "3-5 business days" unless that is the actual policy line I gave you
- Give one thing the customer can check themselves

OUTPUT
1. Confirm the exact amount status in one sentence (initiated / not initiated)
2. The reference number, if I gave one
3. The timeline from my policy line, in working days, and the date it should land
4. What to do if it does not arrive (one action, with what to quote)
5. Sign-off with [MY NAME], ticket [REF]

CHECK
If the refund is NOT YET initiated, do not describe a timeline — write the escalation line instead and put
"initiate refund" under NEED FROM SYSTEM.
```

P6 Wrong item delivered

When the picker or seller sent the wrong variant.

```
You are a support agent for [COMPANY]. The customer received the wrong item.

FACTS
- Ordered: [CATEGORY / VARIANT]
- Received: [CATEGORY / VARIANT]
- Photos received: [YES / NO]
- Return pickup available in [X] days
- Correct item in stock: [YES / NO / UNKNOWN]

CUSTOMER STATE
Irritated, wants the correct item, worried about the return process.

CONSTRAINTS
- 100-130 words, apologise once, then be operational
- Give the sequence of steps in order, not a paragraph
- If the correct item is out of stock, do not promise a date — offer the choice per [POLICY LINE]

OUTPUT
1. One line confirming the mismatch
2. The three steps in order: pickup, dispatch, delivery window
3. What the customer must keep ready
4. What to do if the pickup does not happen
5. Sign-off with [MY NAME], ticket [REF]

CHECK
List any missing policy fact under NEED FROM SYSTEM. Do not invent a pickup date.
```

P7 Cancellation save — before the order ships

The retention conversation, handled without pressure tactics.

```
You are a retention-trained support agent for [COMPANY]. The customer has asked to cancel an order that has
not shipped.

FACTS
- Order status: [NOT SHIPPED / PACKED / SHIPPED]
- Reason given by customer: [REASON]
- We may offer: [POLICY LINE — e.g. "cancel free before dispatch" / "one exchange of size"]
- Alternative that genuinely solves their reason: [e.g. different size, later delivery date]

CUSTOMER STATE
Decided, mildly annoyed, expects resistance.

CONSTRAINTS
- 80-110 words
- Do not argue, do not use urgency tricks, do not offer a discount unless the policy line says so
- Make cancelling easy and fast — this is a trust move, not a loss
- Offer the alternative once, then stop

OUTPUT
1. Confirm the cancellation and the refund route with timing
2. One sentence offering the alternative, only if it actually solves their stated reason
3. Confirm nothing else is needed from them
4. Sign-off with [MY NAME], ticket [REF]

CHECK
If the order is already shipped, do not confirm a cancellation — write the refusal-to-cancel path per policy
and list the missing policy under NEED FROM SYSTEM.
```

P8 Payment failed, order not created

The customer's money is safe but their order never went through.

```
You are a support agent for [COMPANY]. A customer tried to pay and the order did not get created.

FACTS
- Gateway message the customer saw: [MESSAGE]
- Money deducted: [YES / NO / UNKNOWN]
- Order exists in system: [YES / NO]
- Retry guidance per [POLICY LINE]: [e.g. "use UPI instead of card for orders above Rs 2,000"]

CUSTOMER STATE
Confused, unsure whether to pay again.

CONSTRAINTS
- 70-100 words
- Answer the only question that matters first: "should I pay again?"
- Never tell the customer to "just try again" without addressing the deducted amount
- No technical jargon about gateways or timeouts

OUTPUT
1. The direct answer on paying again
2. What happened, in one plain sentence
3. What happens to the deducted amount, with a timeline if one was deducted
4. One action for the customer
5. Sign-off with [MY NAME], ticket [REF]

CHECK
If money was deducted and no order exists, the reply must include the refund initiation line and its
reference. If either is missing, list it under NEED FROM SYSTEM.
```

P9 Warranty claim — inside the window

Product failure, proof of purchase, and the walk-in vs pickup decision.

```
You are a support agent for [COMPANY]. A customer is claiming warranty on a product that failed.

FACTS
- Purchase date: [X] months ago
- Warranty period per [POLICY LINE]: [Y]
- Fault described: [DESCRIPTION]
- Proof of purchase: [INVOICE / ORDER ID / NONE]
- Service route: [PICKUP / WALK-IN CENTRE / ON-SITE]

CUSTOMER STATE
Frustrated that a fairly new product failed; wants it fixed fast.

CONSTRAINTS
- 110-140 words
- Confirm eligibility plainly, then give the route
- If proof is missing, tell them what else is accepted per policy — do not stall them
- No promises about repair turnaround beyond what the policy line says

OUTPUT
1. Eligibility confirmation with the warranty end date
2. The service route, step by step
3. What to keep ready
4. What happens if the fault is not covered
5. Sign-off with [MY NAME], ticket [REF]

CHECK
Do not state a warranty period you were not given. Missing period goes under NEED FROM SYSTEM.
```

P10 Installation or service visit not done

The classic technician no-show complaint.

```
You are a support agent for [COMPANY]. A scheduled installation or service visit did not happen.

FACTS
- Visit was scheduled for [DATE / SLOT]
- Technician status: [NO SHOW / CANCELLED BY US / CUSTOMER NOT AVAILABLE]
- Next available slot: [DATE / SLOT or UNKNOWN]
- Escalation route per [POLICY LINE]: [e.g. "priority slot within 48 hours"]

CUSTOMER STATE
Angry — took leave from work, waited all day.

CONSTRAINTS
- 90-120 words
- Acknowledge the wasted day specifically, not generically
- Give a fixed slot, not "soon"
- Do not blame the technician by name or the customer

OUTPUT
1. Acknowledge the missed visit and what it cost them (one sentence)
2. What went wrong, in one line, without excuses
3. The new slot with date and window
4. What happens if it is missed again — the escalation route
5. Sign-off with [MY NAME], ticket [REF]

CHECK
If no slot is available, offer the escalation route and a callback time instead. List the missing slot under
NEED FROM SYSTEM.
```

P11 Subscription cancellation — the save that is not sleazy

For subscription and SaaS desks. Retention without dark patterns.

```
You are a support agent for [COMPANY], a subscription service. The customer has asked to cancel.

FACTS
- Plan: [PLAN NAME], [MONTHLY / ANNUAL], renews on [DATE]
- Reason given: [TOO EXPENSIVE / NOT USING / FEATURE MISSING / SWITCHING]
- What we may offer per [POLICY LINE]: [pause / downgrade / nothing]
- Data or content the customer will lose: [WHAT]

CUSTOMER STATE
Resigned rather than angry; has already decided.

CONSTRAINTS
- 90-120 words
- Confirm the cancellation and the last day of access in the first two lines
- State exactly what they lose, without scare tactics
- Offer the alternative once, factually, and accept the answer
- No "are you sure?" loops

OUTPUT
1. Cancellation confirmed, last day of access
2. What happens to their data or content, with the retention period
3. One alternative that fits their stated reason, one sentence
4. How to come back later
5. Sign-off with [MY NAME], ticket [REF]

CHECK
If the retention period is not in my facts, do not state one. List it under NEED FROM SYSTEM.
```

P12 KYC or verification stuck

When the customer has uploaded documents and nothing has moved.

```
You are a support agent for [COMPANY], a [BANK / FINTECH / PLATFORM]. A customer's KYC or verification has
been pending.

FACTS
- Submitted on: [X] days ago
- Current status: [UNDER REVIEW / DOCUMENT UNCLEAR / MISMATCH / REUPLOAD NEEDED]
- Which document is the problem: [DOCUMENT TYPE]
- Standard turnaround per [POLICY LINE]: [X] hours / days

CUSTOMER STATE
Anxious — cannot use the account, may have money stuck.

CONSTRAINTS
- 80-110 words, precise and reassuring
- Never ask for a document by saying "send your Aadhaar" — name the requirement, not the number
- Do not confirm approval you cannot see
- No security advice that sounds like a lecture

OUTPUT
1. Where the application stands, exactly
2. What is holding it, in one line
3. The one action needed, with a specific format or angle of the photo if relevant
4. The turnaround after resubmission
5. Sign-off with [MY NAME], ticket [REF]

CHECK
Do not say "your details are safe with us" unless it is in the policy line. Missing facts go under NEED FROM
SYSTEM.
```

P13 Repeat contact — the third follow-up

The customer has written three times. This reply has to break the loop.

```
You are a senior support agent for [COMPANY]. This is the customer's third contact about the same issue.

FACTS
- First contact: [X] days ago
- What was promised: [PROMISE 1], [PROMISE 2]
- What actually happened: [REALITY]
- Current owner: [TEAM / PERSON ROLE]
- Resolution path now: [SPECIFIC ACTION + DATE]

CUSTOMER STATE
Angry and losing trust. Has used words like "useless", "no one responds", "I will post this online".

CONSTRAINTS
- 90-120 words
- Open by naming the failures — do not open with an apology for "the delay"
- No new promises you cannot personally keep
- Give a named owner role and a date, not "the concerned team"
- Do not ask the customer to explain the issue again

OUTPUT
1. One sentence listing what went wrong, in their terms
2. One sentence on what changes now
3. The specific action, owner role and date
4. What the customer should do if that date passes
5. Sign-off with [MY NAME], ticket [REF]

CHECK
Never restate a promise from contact 1 or 2 as if it is new. If the resolution path is unknown, write the
escalation-only version and list the gap under NEED FROM SYSTEM.
```

P14 Multi-issue complaint — the split reply

When one message contains four problems and one of them is money.

```
You are a support agent for [COMPANY]. The customer's message contains several separate issues.

FACTS
- Issue 1: [DESCRIPTION] — status [SOLVED / PENDING / NOT OURS]
- Issue 2: [DESCRIPTION] — status [ ]
- Issue 3: [DESCRIPTION] — status [ ]
- The one the customer cares about most: [WHICH, and why you think so]

CUSTOMER STATE
Overwhelmed; feels ignored because previous replies answered only one point.

CONSTRAINTS
- 120-160 words
- Number the issues in the reply, in the same order as my facts
- Every issue gets either a resolution or a date — no issue is left silent
- Lead with the one that matters most to the customer, not the easiest one

OUTPUT
1. One line: "You raised four things — here is where each stands."
2. Numbered list, one line per issue, each ending in an action or a date
3. One line on what happens next overall
4. Sign-off with [MY NAME], ticket [REF]

CHECK
If any issue is not ours to solve, say who owns it and what we will do anyway. Do not silently drop an issue
— that is what caused this contact.
```

PART 5 · MODULE 2

Angry customers and escalations

9 prompts for the conversations that decide whether you keep your job and your scorecard

Anger is information, not abuse. The prompts here separate the two: they help you write replies that de-escalate without grovelling, and they help you document a case properly when someone crosses the line.

> **Before any de-escalation prompt:** if the customer is threatening self-harm, or the conversation has turned into abuse, stop using AI to craft a reply and follow your company's escalation and safety process immediately. No prompt replaces that.

P15 De-escalation ladder — first angry message

Caps-lock, threats, accusations of fraud. Use before the case reaches a supervisor.

```
You are a senior escalation agent for [COMPANY]. The customer is angry in their first message.

FACTS
- Complaint in their words: [PARAPHRASE]
- What we actually got wrong: [OR "nothing — expectation mismatch"]
- What we can do per [POLICY LINE]: [ACTION]
- Time already lost: [X] days

CUSTOMER STATE
Angry, using strong language, threatening to escalate publicly. Not abusive.

CONSTRAINTS
- 90-120 words
- First sentence must contain the customer's own complaint in plain words — they must feel read, not
processed
- Do not repeat "I understand your frustration"
- No "as per our policy" in the first three sentences
- Take one clear piece of ownership, even if the fault is with a courier or partner
- End with one concrete action and a time

OUTPUT
1. Their complaint, restated accurately in one sentence
2. What we are doing about it, with a time
3. What we are not able to do, if anything, stated once and plainly
4. How to reach me directly
5. Sign-off with [MY NAME], ticket [REF]

CHECK
Do not concede anything not in the policy line. If the policy line is missing, write the reply without a
remedy and list it under NEED FROM SYSTEM.
```

P16 When the customer asks for a manager

The transfer request, handled so it does not become a complaint about you.

```
You are a support agent for [COMPANY]. The customer has demanded to speak to a manager or supervisor.

FACTS
- Their issue: [DESCRIPTION]
- What has already been tried: [STEPS]
- Supervisor availability: [AVAILABLE NOW / CALLBACK IN X HOURS / NOT AVAILABLE]
- What the supervisor can actually authorise beyond you: [POLICY LINE]

CUSTOMER STATE
Distrustful — believes the agent cannot or will not help.

CONSTRAINTS
- 70-100 words
- Do not resist the request and do not take it personally
- State what the supervisor can and cannot change, honestly — this prevents a second letdown
- Give a specific time, not "shortly"

OUTPUT
1. Confirm the transfer will happen, with the time
2. One line summarising what the supervisor will already know, so the customer does not repeat everything
3. What the supervisor can authorise, and what is fixed regardless
4. Sign-off with [MY NAME], ticket [REF]

CHECK
Never promise the supervisor will approve something outside policy. If you do not know their authority,
write the honest version and list the gap under NEED FROM SYSTEM.
```

P17 Legal or consumer-court threat

Handled calmly, factually, without admitting liability.

```
You are a support agent for [COMPANY]. The customer has mentioned a lawyer, consumer court, or a formal
complaint.

FACTS
- Their claim: [DESCRIPTION]
- Amount in dispute: [BAND, e.g. "about Rs 3,000"]
- What our records show: [FACTS]
- What we have already offered: [OFFER]
- Escalation contact per [POLICY LINE]: [ROLE / EMAIL]

CUSTOMER STATE
Cold and formal. Has started documenting everything.

CONSTRAINTS
- 100-130 words, formal, no warmth-performance
- Do not admit fault, do not deny fault — state the record
- Do not say "we will not be liable"
- Do not offer anything new without a policy line
- Give the formal escalation channel so they have a next step that is not a court

OUTPUT
1. Acknowledgement of their message without commentary on the threat
2. The record, in dated bullet form
3. What we are willing to do, exactly as per policy
4. The formal escalation channel, with the reference to quote
5. Sign-off with [MY NAME], ticket [REF]

CHECK
This reply is the one most likely to be read later by someone else. Use only facts I gave you. Anything else
goes under NEED FROM SYSTEM.
```

P18 Social media threat

They are going to post. This is a real chance to keep them.

```
You are a support agent for [COMPANY]. The customer says they will post about this on social media or a
review platform.

FACTS
- Their issue: [DESCRIPTION]
- Days unresolved: [X]
- What we can do now per [POLICY LINE]: [ACTION]
- Whether a senior callback is possible: [YES / NO]

CUSTOMER STATE
Publicly angry, wants to be taken seriously, may be bluffing — treat it as real either way.

CONSTRAINTS
- 80-110 words
- Never mention the review platform, never say "please remove your post", never offer something in exchange
for silence
- Solve the issue, not the post
- Give a callback with a time if possible

OUTPUT
1. Their issue restated, one sentence
2. What is happening now, with a time
3. The callback offer with a slot
4. Sign-off with [MY NAME], ticket [REF]

CHECK
Offering compensation to delete a review is a compliance problem in most companies. Do not do it, even if
the customer asks.
```

P19 Abusive language — the boundary reply

One warning, in writing, that protects you and the record.

```
You are a support agent for [COMPANY]. The customer has used abusive or threatening language.

FACTS
- What was said: [SUMMARY, no verbatim abuse]
- What we still owe them: [ISSUE + STATUS]
- Boundary policy per [POLICY LINE]: [e.g. "one written warning, then chat closure"]

CUSTOMER STATE
Hostile. May be venting about the issue rather than at the agent.

CONSTRAINTS
- 60-90 words
- Do not moralise, do not match their tone, do not apologise for setting the boundary
- Separate the person from the problem: we will fix the issue, we will not accept abuse
- Keep the door open exactly once
- Language: neutral, professional, no adjectives about their behaviour

OUTPUT
1. One line: we will resolve the issue
2. One line: what we cannot continue with
3. One line: what happens next, with a time
4. Sign-off with [MY NAME], ticket [REF]

CHECK
Follow your company's exact wording if it has one — this prompt is for desks that do not. Document the
exchange in the ticket after sending.
```

P20 Churn save — the customer is leaving

Price, service quality, or a competitor. Three different replies.

```
You are a retention agent for [COMPANY]. The customer says they are leaving for a competitor.

FACTS
- Stated reason: [PRICE / SERVICE QUALITY / FEATURE GAP / MOVED / OTHER]
- Tenure: [X] months / years
- Value band: [LOW / MID / HIGH, in bands not rupees]
- What we may offer per [POLICY LINE]: [OFFER]
- The one thing we genuinely do better: [FACT]

CUSTOMER STATE
Decided but willing to listen once. Has probably already compared prices.

CONSTRAINTS
- 90-120 words
- Match the reply to the stated reason — do not answer a service complaint with a discount
- One offer maximum, with a deadline that is real
- Do not disparage the competitor
- If we cannot fix their reason, say so and make the exit clean

OUTPUT
1. Acknowledge the specific reason, one sentence
2. What changes if they stay, with the offer and deadline
3. What we cannot change, honestly
4. The exit path if they still want to leave
5. Sign-off with [MY NAME], ticket [REF]

CHECK
No offer without a policy line. If the offer is unknown, write the honest no-offer version and list it under
NEED FROM SYSTEM.
```

P21 Escalation handover note

The 6-line summary a supervisor actually reads.

```
You are writing an internal escalation note. This is not a customer-facing message.

FACTS
- Customer issue: [DESCRIPTION]
- Contacts so far: [DATES + WHAT WAS SAID]
- What has been done: [ACTIONS]
- Why it needs escalation: [REASON]
- What I recommend: [RECOMMENDATION]
- Deadline or risk: [e.g. "chargeback window closes in 4 days" / "customer threatens legal"]

CUSTOMER STATE
[One line.]

CONSTRAINTS
- Maximum 120 words
- Bullet form, no paragraphs
- Facts and dates only, no adjectives
- No speculation about who is at fault
- Must be readable in 20 seconds by a supervisor with 40 open cases

OUTPUT
Six bullets in this order: ISSUE / HISTORY / DONE / BLOCKER / ASK / RISK. Then one line: "Agent: [MY NAME],
[REF]".

CHECK
If the recommendation depends on a policy I did not give you, write ASK: "confirm policy on [X]" instead of
recommending.
```

P22 Apology that does not grovel

For when your reply is 90% apology and 10% information.

```
You are an editor. Rewrite the draft below so it apologises once, takes ownership, and spends the rest of
the words on information and action.

DRAFT
[PASTE YOUR DRAFT]

CONSTRAINTS
- 90-120 words
- Exactly one apology, in the first two sentences
- Delete: "we apologise for any inconvenience caused", "we value your patience", "rest assured", "kindly",
"do the needful"
- Every remaining sentence must give information or a next step
- Keep the facts and the remedy exactly as they are in the draft
- Same language as the draft

OUTPUT
The rewritten reply, then a line starting "REMOVED:" listing the filler phrases you deleted.

CHECK
Do not add a remedy, a date or a promise that is not in the draft.
```

P23 The customer who is right and we are wrong

When the SOP has failed the customer. Say it plainly.

```
You are a senior support agent for [COMPANY]. Our process failed the customer and the customer is correct.

FACTS
- What we got wrong: [SPECIFIC]
- Consequence for the customer: [e.g. "paid twice", "missed a deadline", "lost a booking"]
- Remedy per [POLICY LINE]: [REMEDY]
- What we are changing so it does not repeat: [PROCESS NOTE]

CUSTOMER STATE
Calm but firm. Wants acknowledgement more than money.

CONSTRAINTS
- 90-120 words
- Say "we got this wrong" in the first sentence — no passive voice, no "an error occurred"
- Do not blame a system, a courier or a colleague
- State the remedy with a date
- One line on the process change, only if I gave you one

OUTPUT
1. Plain admission
2. What it cost them, in their terms
3. The remedy and its date
4. What changes internally
5. Sign-off with [MY NAME], ticket [REF]

CHECK
Never admit to something outside my facts, and never admit liability for injury, data loss or legal matters
— those go to the escalation route instead.
```

PART 6 · MODULE 3

Language and tone

8 prompts for Hinglish, Hindi, the other Indian languages, and the tone slips that cost you quality marks

Machine translation fails in three places: brand names, money and formality. Every prompt in this module keeps English for product names, amounts, dates and policy terms, and keeps the customer's own language for everything else. That mix is what Indian customers actually read comfortably — and what your QA will not flag.

Read the Hindi, Tamil or Bengali output aloud before sending. If you cannot read the script, use the Hinglish version instead. A confidently wrong translation damages trust far more than an English reply with one Hindi line in it.

P24 Hinglish reply — Roman script, no Devanagari

The most-used prompt in this kit for North and West India chats.

```
You are a support agent for [COMPANY] writing to an Indian customer on WhatsApp.

FACTS
- Issue: [DESCRIPTION]
- Status: [STATUS]
- Next step: [ACTION + TIMING]
- Policy line: [POLICY LINE or NONE]

CUSTOMER STATE
[Angry / confused / polite]. Wrote to us in Hinglish.

CONSTRAINTS
- Write in Hinglish using Roman script only — no Devanagari characters at all
- Natural spoken register, the way a helpful person in a city office would type — not translated Hindi
- All product names, brand names, amounts, dates, ticket numbers and policy words stay in English
- 70-100 words
- No "kindly", no "do the needful", no "aapki query ka samadhan"
- No emoji
- Do not invent a remedy

OUTPUT
1. One line acknowledging the exact issue
2. What is happening, two lines maximum
3. The next step with a time
4. One question only if needed
5. Sign-off: "[MY NAME], [COMPANY] support"

CHECK
If you cannot express a policy term naturally in Hinglish, keep it in English inside the sentence rather
than translating it badly.
```

P25 Hindi reply — Devanagari, formal but human

For customers who wrote in Hindi and expect Hindi back.

```
You are a support agent for [COMPANY] writing to an Indian customer in Hindi.

FACTS
- Issue: [DESCRIPTION]
- Status: [STATUS]
- Next step: [ACTION + TIMING]
- Policy line: [POLICY LINE or NONE]

CUSTOMER STATE
[Angry / worried / polite]. Wrote to us in Hindi (Devanagari).

CONSTRAINTS
- Reply in Hindi, Devanagari script
- Simple, everyday Hindi — the register of a bank branch or a courier helpline, not literary Hindi
- Product names, brand names, amounts, dates and ticket numbers stay in English/Roman
- 70-100 words
- Avoid heavy Sanskritised words; if a technical term has no natural Hindi equivalent, use the English word
- No emoji, no exclamation marks
- Do not invent a remedy

OUTPUT
1. One line naming the issue
2. What is happening, briefly
3. The next step with a date or time
4. One question only if needed
5. Sign-off: "[MY NAME], [COMPANY]"

CHECK
After writing, re-read for grammar agreement (gender and number). If a sentence feels translated, rewrite it
shorter.
```

P26 Tamil, Telugu, Bengali, Marathi, Kannada, Gujarati reply

The regional-language version, with the safety rails that matter.

```
You are a support agent for [COMPANY] writing to a customer in [LANGUAGE].

FACTS
- Issue: [DESCRIPTION]
- Status: [STATUS]
- Next step: [ACTION + TIMING]

CUSTOMER STATE
[State]. Wrote to us in [LANGUAGE].

CONSTRAINTS
- Write entirely in [LANGUAGE], in its own script
- Use the everyday spoken register of a city customer, not formal written [LANGUAGE]
- Keep product names, brand names, amounts, dates and ticket numbers in English/Roman
- 60-90 words
- No emoji, no exclamation marks
- Do not translate policy clauses — quote the English clause and explain it in one [LANGUAGE] sentence
- Do not invent a remedy

OUTPUT
1. One line naming the issue
2. What is happening
3. The next step with a time
4. Sign-off with [MY NAME]

CHECK
If you are less than fully confident in [LANGUAGE] grammar, say so at the end in one line: "Confidence: low/
medium/high" and name the sentence you are least sure about. I will get it checked.
```

P27 English to plain English

For replies that read like the SOP they were copied from.

```
You are a plain-language editor for an Indian support desk. Rewrite the draft below so a customer who reads
English as a second language understands it in one pass.

DRAFT
[PASTE DRAFT]

CONSTRAINTS
- 80-110 words
- Maximum 15 words per sentence
- Replace every internal term: "disposition", "SLA breach", "escalation matrix", "reverse pickup", "NEFT
reversal" — with the plain action the customer experiences
- Active voice only
- Keep all facts, dates and remedies exactly as in the draft
- No bullet points; this is a chat reply

OUTPUT
The rewrite, then a line starting "PLAIN-LANGUAGE SWAPS:" listing the terms you replaced and what you used
instead.

CHECK
If a technical term has no plain equivalent, keep the term and add three words of explanation in brackets.
```

P28 Tone repair — the reply that went wrong

Your last message made it worse. Here is how to reset.

```
You are a senior support agent for [COMPANY]. My previous reply to this customer made things worse.

FACTS
- What I said that landed badly: [QUOTE OR PARAPHRASE]
- Why it landed badly: [e.g. "sounded like a policy refusal", "answered a different question", "copy-pasted
a template"]
- The actual issue: [DESCRIPTION]
- What we can do: [POLICY LINE]

CUSTOMER STATE
Angrier than before. May have said "you are not even reading my messages".

CONSTRAINTS
- 80-110 words
- Do not blame the channel, the template or "a misunderstanding"
- Own the specific miss in one sentence — name what I got wrong
- Do not re-explain the policy that caused the problem
- Move to a single concrete action
- No "thank you for your patience"

OUTPUT
1. One line naming what I got wrong
2. The actual issue, restated correctly
3. What happens now, with a time
4. An offer to stay on the case personally
5. Sign-off with [MY NAME], ticket [REF]

CHECK
If the original refusal was correct on policy, say the refusal stands — do not reverse a correct decision to
win the moment.
```

P29 Empathy without the performance

For anxiety, bereavement, medical or financial distress in a support thread.

```
You are a support agent for [COMPANY]. The customer's situation involves distress beyond a normal complaint.

FACTS
- Situation: [DESCRIPTION — e.g. "hospitalised, missed the renewal window"]
- What we can do per [POLICY LINE]: [ACTION]
- What we cannot do: [LIMIT]

CUSTOMER STATE
Distressed. Not angry at us specifically.

CONSTRAINTS
- 70-100 words
- One short human sentence first — no "we understand your situation" formula
- Do not use the word "unfortunately" anywhere
- Do not offer sympathy and then a refusal in the same breath; separate them with a concrete option
- No medical, legal or financial advice of any kind
- Keep dignity: no "stay strong", no blessings, no emoji

OUTPUT
1. One plain human sentence acknowledging the situation
2. What we can do, stated simply
3. What we cannot do, once, without justification
4. Who else might help, only if I gave you that in FACTS
5. Sign-off with [MY NAME]

CHECK
If the situation involves a medical emergency or a threat to life, do not write a reply — escalate per
company process.
```

P30 Subject line and first-line rewrite

For email desks: the two lines that decide whether it gets read.

```
You are an email support specialist for [COMPANY]. Write the subject line and first line for the reply
below.

CONTEXT
- Customer's subject line: [SUBJECT]
- Issue: [DESCRIPTION]
- Resolution in the reply: [ACTION + TIMING]
- Reply body: [PASTE BODY]

CONSTRAINTS
- Subject: 4-8 words, states the outcome, no "Re:" games, no "Important", no all caps, no ticket number
alone
- First line: 12-20 words, answers "what is happening with my issue" immediately
- No "Dear Customer", no "Greetings of the day"
- Use the customer's name only if I gave it to you

OUTPUT
SUBJECT: [line]
FIRST LINE: [line]
Then one line: "Why this works: " explaining in under 15 words.

CHECK
The subject must not promise anything the reply body does not deliver.
```

P31 Voice-note and phone-call summary into a written reply

For blended desks where the customer called and now wants it in writing.

```
You are a support agent for [COMPANY]. I will describe a phone call. Turn it into a written reply the
customer can keep.

CALL NOTES
- What the customer said: [SUMMARY]
- What I told them: [SUMMARY]
- Agreed next step: [ACTION + DATE]
- Anything I could not confirm on the call: [LIST]

CUSTOMER STATE
[State]. Wants written confirmation because the call left them unsure.

CONSTRAINTS
- 100-130 words
- Written confirmation, not a transcript
- Every commitment I made on the call must appear with its date
- Anything I could not confirm must be listed as pending, with when it will be confirmed
- No new commitments
- Professional, warm, no filler

OUTPUT
1. One line: "This is a written summary of our call today."
2. What was discussed, in three lines maximum
3. Commitments, each with a date
4. What is still pending, with a date
5. Sign-off with [MY NAME], ticket [REF]

CHECK
If my notes contain a commitment I cannot honour, flag it at the end under "CHECK BEFORE SENDING" instead of
writing it.
```

PART 7 · MODULE 4

Speed tools

9 prompts that cut the invisible work — reading, summarising, handover, macros and notes

The reply is not where agents lose time. Reading a 40-message thread, writing a handover, and tagging a disposition are. These prompts are the ones supervisors notice, because the whole team benefits when you write them down.

P32 Summarise a long thread in 6 lines

For the case that lands on you mid-conversation with 30 messages behind it.

```
You are a support analyst. Summarise the customer conversation below for the next agent.

THREAD
[PASTE THE REDACTED THREAD]

CONSTRAINTS
- Maximum 6 lines, bullet form
- Facts and dates only
- No adjectives, no judgement about the customer or the previous agent
- Keep the customer's exact complaint wording in quotes if it is short

OUTPUT
- ISSUE: one line
- HISTORY: contacts and dates, one line
- DONE: what has already been tried, one line
- PROMISED: anything committed and not delivered, one line
- OPEN: what is still unresolved, one line
- NEXT: the single most useful next action, one line

CHECK
If the thread contains a promise that was never delivered, it must appear in PROMISED — that is the most
common cause of a repeat complaint.
```

P33 Action items and owners

Turn a messy internal chat into a task list.

```
You are a support team lead's assistant. Extract every action item from the notes below.

NOTES
[PASTE NOTES OR CHAT]

CONSTRAINTS
- One row per action
- Only actions that someone actually committed to — not suggestions
- If an owner is unclear, write UNASSIGNED
- If a date is unclear, write NO DATE — never invent one

OUTPUT
A table with columns: Action | Owner | Due | Blocking what
Then one line: "Unresolved decisions: " listing anything discussed but not decided.

CHECK
Do not merge two actions into one row, even if they are similar.
```

P34 Shift handover note

Five lines that save the next shift twenty minutes.

```
You are writing a shift handover note for the incoming agent. Not customer-facing.

FACTS
- Cases still open: [LIST with status]
- Cases that will breach SLA in the next 8 hours: [LIST]
- Promises made today that fall due tomorrow: [LIST]
- Anything a customer was told that the system does not reflect: [LIST]

CONSTRAINTS
- Maximum 100 words
- Bullet form, one line per item
- Order by risk: breaches first, then promises, then the rest
- No narrative, no "it was a busy shift"
- Ticket references only, no customer names

OUTPUT
Four bullets, in this order: BREACH RISK / PROMISES DUE / OPEN CASES / WATCH OUT. Then one line: "Handover
by [MY NAME], [TIME]."

CHECK
Anything a customer was told that the system does not reflect must appear — that is what causes the next
shift to contradict you.
```

P35 Turn a resolved ticket into a knowledge-base article

One good article removes twenty future tickets.

```
You are a knowledge-base writer for a support team. Turn the resolved case below into a reusable article.

CASE
- Customer problem: [DESCRIPTION]
- Root cause: [CAUSE]
- What fixed it: [STEPS]
- Time to resolve: [X]
- How many similar cases appear per month: [ESTIMATE or UNKNOWN]

CONSTRAINTS
- 200-280 words
- Written for agents, not customers
- Steps numbered, each starting with a verb
- Include a "when NOT to use this" section
- No customer data, no names, no ticket numbers
- If the root cause is unknown, say so and write it as a diagnostic article instead

OUTPUT
TITLE (6-9 words)
WHEN THIS APPLIES
STEPS (numbered)
WHEN NOT TO USE THIS
ESCALATE IF
LAST VERIFIED: [today's date]

CHECK
Do not describe a system path or tool name I did not give you. Write [PATH] as a placeholder instead.
```

P36 Macro library from your last 20 replies

Build your own canned responses from your own words.

```
You are a support operations analyst. From the replies below, build a macro library.

REPLIES
[PASTE 10-20 OF YOUR OWN SENT REPLIES, REDACTED]

CONSTRAINTS
- Group by scenario, not by wording
- Maximum 12 macros
- Each macro: a name, when to use it, and a template with [PLACEHOLDERS] where facts change
- Keep my tone and vocabulary — do not rewrite into corporate English
- Flag any macro where the wording could become a compliance risk (amounts, timelines, legal)

OUTPUT
For each macro: NAME / WHEN / TEMPLATE / RISK (low, medium, high)
Then one line: "Macros with HIGH risk should be reviewed by your TL before use."

CHECK
Never generalise a reply that contained a specific amount, date or remedy — put a placeholder there instead.
```

P37 Disposition and tagging notes

The two-line note that makes your case searchable later.

```
You are a support analyst. Write the disposition note and tags for the case below.

CASE
- Customer issue: [DESCRIPTION]
- What was done: [ACTION]
- Outcome: [RESOLVED / PENDING CUSTOMER / ESCALATED / NO FAULT FOUND]
- Category: [YOUR TEAM'S CATEGORY LIST]

CONSTRAINTS
- Note: maximum 30 words, factual, third person
- Tags: 3-5, from my category list only, lowercase with hyphens
- No customer names, no opinion, no "customer was rude"
- Must be readable by someone who has never seen the case

OUTPUT
NOTE: [one line]
TAGS: [tag, tag, tag]
ROOT CAUSE: [one of: product / process / logistics / payment / expectation / unknown]

CHECK
If the outcome is PENDING CUSTOMER, the note must say what the customer was asked to do.
```

P38 Reply in three lengths

When you do not know how much the customer wants to read.

```
You are a support agent for [COMPANY]. Write the same reply at three lengths.

FACTS
- Issue: [DESCRIPTION]
- Status and next step: [ACTION + TIMING]
- Policy line: [POLICY LINE or NONE]

CONSTRAINTS
- Version A: 40-60 words, for chat
- Version B: 90-120 words, for WhatsApp or email
- Version C: 150-190 words, for a formal email with a reference number
- All three must contain the same facts and the same commitment
- No filler in any version

OUTPUT
A — [text]
B — [text]
C — [text]
Then one line: "Facts that differ between versions: " (should be "none").

CHECK
If a fact appears in C but not in A, the versions are not equivalent — fix it.
```

P39 Translate your team's SOP into a decision tree

For the moment a new joiner asks you how you know what to do.

```
You are a process analyst. Convert the SOP text below into a decision tree an agent can follow in 30
seconds.

SOP
[PASTE SOP SECTION]

CONSTRAINTS
- Maximum 15 nodes
- Each node: a question with yes/no or a short list of options
- Each leaf: one action, one owner, one timeline
- Use the SOP's own wording for policy terms
- Do not add steps the SOP does not contain

OUTPUT
Indented tree using → and ↳ symbols, one line per node.
Then one line: "Gaps in the SOP: " listing anything the SOP does not cover.

CHECK
If the SOP contradicts itself, flag it at the end instead of choosing a side.
```

P40 Pre-shift briefing from yesterday's data

For team leads and for agents who want to sound like one.

```
You are a support team lead. Write a 60-second pre-shift briefing from yesterday's numbers.

DATA
- Volume: [X] contacts, [X]% vs previous day
- Top 3 contact drivers: [LIST]
- CSAT: [X]%, [up/down] [Y] points
- SLA: [X]% within target
- Repeat contacts: [X]
- Staffing note: [e.g. "two agents on leave"]

CONSTRAINTS
- Maximum 120 words, spoken register
- Lead with the one number that matters today
- No motivational filler
- One specific instruction for the shift
- Numbers only from my data

OUTPUT
1. The headline number
2. What is driving it
3. One instruction for today
4. One thing to watch

CHECK
Do not explain why a number moved unless I gave you the reason.
```

PART 8 · MODULE 5

Quality and coaching

8 prompts that make you the person who catches problems before the auditor does

Quality scores are decided in the first and last two lines of a reply, and in whether you promised something you could not deliver. These prompts let you audit your own work in the ten seconds before you press send — and, if you want to move up, audit the team's.

P41 Self-QA before you send

The 30-second check that protects your score.

```
You are a strict quality auditor for an Indian support desk. Audit my draft reply against the case facts and
tell me what would be marked down.

CASE FACTS
[FACTS]

MY DRAFT
[PASTE DRAFT]

COMPANY QA CRITERIA (if you have them)
[PASTE CRITERIA, or write "use standard criteria"]

CONSTRAINTS
- Score out of 10
- List every issue as: line number → what is wrong → the fix, in one line
- Check specifically: a commitment without a date, a fact not in the case, a banned filler phrase, missing
next step, wrong tone for the customer's state, personal data left in
- Do not rewrite the whole reply — only the problem lines

OUTPUT
SCORE: [x]/10
ISSUES: (numbered)
VERDICT: SEND / FIX FIRST / DO NOT SEND

CHECK
If the draft promises something the case facts do not support, that is an automatic DO NOT SEND.
```

P42 Score a batch of replies

For QA roles, or an agent preparing for a calibration session.

```
You are a QA analyst. Score the replies below against the criteria.

CRITERIA
[PASTE YOUR QA SCORECARD OR WRITE "standard: accuracy, ownership, tone, resolution, compliance"]

REPLIES
[PASTE 3-5 REPLIES WITH THEIR CASE FACTS]

CONSTRAINTS
- One row per reply
- Score each criterion out of 5
- Every score below 4 needs a one-line reason quoting the reply
- No credit for length
- Flag any reply that could create a compliance or liability issue separately

OUTPUT
A table: Reply | Accuracy | Ownership | Tone | Resolution | Compliance | Total
Then: "Lowest-scoring pattern across replies: " in one line, and "Coaching priority: " in one line.

CHECK
Do not score a reply you do not have facts for — mark it INSUFFICIENT DATA instead.
```

P43 Root cause from fifty tickets

What your TL is asked for every month, written in ten minutes.

```
You are a CX analyst. Find the root causes in the ticket summaries below.

TICKETS
[PASTE 20-50 ONE-LINE TICKET SUMMARIES]

CONSTRAINTS
- Group into a maximum of 6 themes
- Each theme: count, one-line description, the process step where it breaks
- Separate product issues from process issues from expectation issues
- No theme with fewer than 3 tickets unless it is a compliance risk
- Do not speculate about causes not visible in the text

OUTPUT
A table: Theme | Count | % | Where it breaks | One fix to test
Then: "The one fix with the highest expected impact: " in one line, with the reasoning in one line.

CHECK
If the volume is too small to generalise, say so in one line before the table.
```

P44 CSAT dip diagnosis

When the score drops and nobody knows why.

```
You are a CX analyst. Diagnose a CSAT drop from the evidence below.

DATA
- CSAT this week: [X]%, last week: [X]%
- Volume change: [X]%
- Top drivers this week: [LIST]
- Verbatim comments (5-10): [PASTE]
- Anything that changed operationally: [e.g. new courier, price change, staffing]

CONSTRAINTS
- Give three hypotheses, ranked by how well the evidence supports them
- For each: what supports it, what would disprove it, and the cheapest way to test
- Do not name a single cause as fact
- No recommendations that require budget approval in the first pass

OUTPUT
HYPOTHESIS 1 (strongest): [claim] — evidence / disproof / test
HYPOTHESIS 2: same
HYPOTHESIS 3: same
Then: "What to check before acting: " one line.

CHECK
If the sample is under 20 responses, state that the drop may be noise before anything else.
```

P45 Coaching feedback for a teammate

Specific, kind, and actually actionable.

```
You are a team lead writing feedback for an agent. Write it so they can act on it today.

CONTEXT
- What happened: [SPECIFIC BEHAVIOUR + CASE]
- Impact: [ON CUSTOMER / ON SCORE / ON TEAM]
- What good looks like: [EXAMPLE OR STANDARD]
- Their strength to build on: [STRENGTH]

CONSTRAINTS
- 120-150 words
- No sandwich technique — do not pad with praise to soften the point
- One behaviour only
- Use the case, not adjectives about the person
- End with one thing to try in the next shift and how we will check it
- Written as a message they could read in front of others without embarrassment

OUTPUT
1. What I saw, specifically
2. Why it matters, in customer terms
3. What to do differently, with the example
4. How we will check it
5. One line acknowledging the strength, only if it is real

CHECK
Never write feedback about attitude, only about observable behaviour.
```

P46 Turn a complaint into a process fix request

How an agent gets heard by operations.

```
You are writing an internal process-improvement request from the support floor.

EVIDENCE
- The repeated problem: [DESCRIPTION]
- Cases affected: [X per week / month]
- Cost per case: [TIME or REFUND BAND]
- What agents currently do: [WORKAROUND]
- Proposed change: [PROPOSAL]

CONSTRAINTS
- 180-220 words, one page
- Open with the cost, not the frustration
- Numbers only from my evidence
- One proposal, not three
- Include what would have to be true for this to work
- Include what breaks if we do nothing

OUTPUT
1. The problem in two lines, with the number
2. What it costs us
3. The workaround agents use today, and its risk
4. The proposal, in three steps
5. What we need to decide, by when

CHECK
Do not exaggerate a number to make the case. If you only have an estimate, write "estimate" next to it.
```

P47 Audit your own last 10 replies

The habit that gets agents promoted in six months.

```
You are a quality coach. Find my patterns across these replies.

MY REPLIES
[PASTE 10 REDACTED REPLIES WITH CASE CONTEXT]

CONSTRAINTS
- Identify maximum 5 recurring patterns, good and bad
- Each pattern: how often it appears, one example quoted, the effect on the customer
- Rank by scorecard impact
- One drill per bad pattern, doable in 5 minutes

OUTPUT
PATTERN 1 (most impactful): description / frequency / example / effect / drill
PATTERN 2: same
PATTERN 3: same
STRENGTH TO KEEP: one line with the example.

CHECK
Do not invent a pattern from a single instance — say "appears once" instead.
```

P48 Calibration prep — defend your score

For the meeting where two auditors disagree about your case.

```
You are helping me prepare for a QA calibration discussion about one case.

CASE
- Facts: [FACTS]
- My reply: [PASTE]
- The score I received: [SCORE]
- The reason given: [REASON]
- What I believe: [MY VIEW]

CONSTRAINTS
- Summarise the strongest version of the auditor's position in 3 lines
- Summarise my position in 3 lines, using only the facts and the written criteria
- Identify what evidence would settle it
- Give me two sentences to open the discussion, calm and factual
- Do not flatter me and do not tell me I am right

OUTPUT
AUDITOR'S CASE: 3 lines
MY CASE: 3 lines
EVIDENCE NEEDED: 2 lines
OPENING LINES: 2 sentences

CHECK
If the criteria clearly support the auditor, say so in the first line.
```

PART 9 · MODULE 6

Career moves

8 prompts to turn this skill into a different job title — inside your company first

The two directions the industry is already naming are conversational AI copilot work (dialogue systems, prompt writing, AI quality) and CX insights work (journey analytics, behaviour modelling). Both are internal transfers before they are job-market moves. These prompts are written for that order.

P49 Your AI experience, written as résumé bullets

Translate a vague AI habit into something a hiring manager believes.

```
You are a résumé writer for Indian BPO and support professionals. Turn my experience into bullets.

MY EXPERIENCE
- Current role: [ROLE], [COMPANY TYPE], [X] months/years
- Volume: [X contacts per day / month]
- Metrics I own: [CSAT / QA / AHT / FCR — with numbers if you have them]
- What I do with AI: [SPECIFIC, e.g. "draft replies, build macros, audit my own replies, summarise threads"]
- Tools: [WHICH TOOLS, honestly]
- Anything I built: [MACRO LIBRARY / KB ARTICLES / PROMPT SET]

CONSTRAINTS
- 5 bullets, maximum 22 words each
- Each bullet starts with a verb and contains a number or a concrete artefact
- No "familiar with", no "passionate about", no "hardworking"
- Do not claim a skill I did not list
- Include the tool names exactly as I wrote them

OUTPUT
5 bullets, then one line: "Gaps a recruiter will ask about: " listing the two most likely.

CHECK
If I did not give a number, use a placeholder like [X%] rather than inventing one.
```

P50 Internal transfer pitch email

To your TL, then to the QA or CX team.

```
You are helping me write an internal transfer request email.

CONTEXT
- My current role: [ROLE], [TENURE]
- Target role: [QA / CHAT SUPPORT / CX ANALYST / AI QUALITY / TEAM LEAD]
- What I have already done toward it: [SPECIFIC — courses, audits, macros, shadowing]
- Evidence: [NUMBERS OR ARTEFACTS]
- Constraint: [e.g. "I need to stay in the same shift for 6 months"]

CONSTRAINTS
- 180-220 words
- Open with what I have done, not what I want
- One clear ask with a specific next step (a meeting, a trial month, a shadowing slot)
- No complaints about the current role
- Respectful of the manager's constraints
- Sound like a colleague, not a cover letter

OUTPUT
Subject line + body + one-line sign-off.

CHECK
Do not claim experience I did not list. If the evidence is thin, the email should ask for a trial rather
than the role.
```

P51 Answer the AI question in an interview

The interview question every support role now asks.

```
You are an interview coach for Indian support and BPO roles. Help me answer one question.

CONTEXT
- The question: "How do you use AI in your day-to-day work?"
- The role I am interviewing for: [ROLE]
- What I actually do: [HONEST DESCRIPTION]
- What they are worried about: [e.g. "agents pasting wrong answers" / "data leakage"]

CONSTRAINTS
- One answer, 60-75 seconds spoken
- Structure: what I use it for, what I never let it do, one concrete result
- Include one guardrail I follow (data, verification, or escalation)
- No hype, no tool worship, no "AI will change everything"
- Do not claim a result I did not give you

OUTPUT
The answer in first person, then three likely follow-up questions with one-line answers each.

CHECK
If I have no concrete result, the answer must use a process improvement instead of a number.
```

P52 30-day upskilling plan, personalised

Same skeleton as Part 12, filled with your reality.

```
You are a career coach for Indian support professionals. Build me a 30-day plan.

CONTEXT
- Current role and shift: [ROLE], [SHIFT]
- Time available per day: [X] minutes
- Target direction: [CONVERSATIONAL AI COPILOT / CX INSIGHTS / QA / TEAM LEAD]
- Current skill level with AI tools: [NONE / BASIC / COMFORTABLE]
- Constraint: [e.g. "no laptop, phone only"]

CONSTRAINTS
- 4 weeks, each week with one outcome, not a list of activities
- Daily tasks must fit the time I gave you, on the device I have
- Every week ends with an artefact I can show someone
- No paid courses unless I named one
- No more than one new tool per week

OUTPUT
WEEK 1 — Outcome / daily tasks / artefact
WEEK 2 — same
WEEK 3 — same
WEEK 4 — same
Then: "How to prove it to my manager: " in two lines.

CHECK
If my time budget is under 20 minutes a day, cut tasks rather than shrinking them.
```

P53 LinkedIn profile for a support professional

Headline, about, and three posts that do not sound like a guru.

```
You are a LinkedIn writer for Indian support professionals. Rewrite my profile.

CONTEXT
- Current role: [ROLE], [X] years
- Speciality: [e.g. escalations, chat quality, regional language support]
- What I am moving toward: [DIRECTION]
- Proof: [NUMBERS OR ARTEFACTS]
- Languages: [LIST]

CONSTRAINTS
- Headline: maximum 12 words, no "aspiring", no "seeking opportunities"
- About: 90-120 words, first person, one concrete example, no buzzwords
- Three post ideas, each a first line that would make a support manager stop scrolling
- No engagement bait, no "agree?" endings

OUTPUT
HEADLINE:
ABOUT:
POST 1 first line:
POST 2 first line:
POST 3 first line:

CHECK
Do not invent a metric. Use [X%] placeholders where I gave no number.
```

P54 Salary conversation with a number

The ask, the range, and what to say when they say no.

```
You are a negotiation coach for Indian support roles. Prepare me for a salary conversation.

CONTEXT
- Current package: [BAND, e.g. "Rs 3.2 LPA"]
- Role I am asking about: [ROLE]
- My evidence: [METRICS, SKILLS, TENURE]
- What I know about the range: [IF ANY]
- My constraint: [e.g. "cannot risk losing this job"]

CONSTRAINTS
- Give me three opening lines, ranked by risk
- Include what to say if they say "no budget this cycle"
- Include what to ask for instead of money (shift, role, certification, title)
- No aggressive scripts, no "walk away" advice unless I said I can
- Do not invent market salary data — tell me to check it

OUTPUT
OPENING LINES (3)
IF NO: two options
ASK INSTEAD OF MONEY: three items
WHAT TO BRING: three documents or facts

CHECK
If I gave no market range, the first instruction must be where to find a credible one.
```

P55 Explain your job to a non-support interviewer

For internal moves into analytics, product or ops.

```
You are helping me explain my support experience to someone outside support.

CONTEXT
- Target team: [PRODUCT / OPS / ANALYTICS / MARKETING]
- My experience: [ROLE + WHAT I HANDLE]
- One case I am proud of: [DESCRIPTION]
- The skill that transfers: [e.g. pattern spotting, writing under pressure, de-escalation]

CONSTRAINTS
- 90 seconds spoken
- Translate support vocabulary into their vocabulary: contacts become signals, complaints become defect
reports, macros become documentation
- One concrete case with a number
- No apologising for being "just" support

OUTPUT
The explanation, then one line: "The sentence to avoid: " naming a phrase that makes support sound junior.

CHECK
Do not overstate the analytics — if I have no data work, say what I would need to learn.
```

P56 Six-month self-review with evidence

The document that makes a promotion conversation possible.

```
You are helping me write a six-month self-review for a support role.

CONTEXT
- Role and tenure: [ROLE], [X] months in this role
- Metrics: [CSAT / QA / AHT / FCR with before and after]
- Projects: [MACROS / KB ARTICLES / PROMPTS / TRAINING]
- Difficult cases handled: [TYPES AND COUNT]
- What I want next: [ROLE OR SCOPE]

CONSTRAINTS
- 250-300 words
- Open with the outcome, not the activity
- Every claim has a number or an artefact
- One honest development area with the action already taken
- End with a specific ask for the next six months
- No self-deprecation, no exaggeration

OUTPUT
1. Outcome summary, three lines
2. Evidence, four bullets
3. Development area, two lines
4. Ask, two lines

CHECK
If a metric has no before-and-after, present it as a level, not an improvement.
```

PART 10

Eight fill-in templates

Print these, or paste them into your notes app. They are the paper version of the prompts above

Each template is a form. Fill it before you open any AI tool and the prompt writes itself — and even without AI, a filled form is a better reply than an empty head.

T1 · Case fact sheet

Ticket ref .....

Channel .....

What happened (3 bullets) .....

Status now .....

Policy line that applies .....

Customer state .....

What is UNKNOWN .....

T2 · Pre-send check (30 seconds)

- Every fact in my reply came from the system, not from the AI
- There is one commitment and it has a date
- The first sentence names the actual problem
- No filler: valued customer / sorry for the inconvenience / kindly / rest assured
- No personal data pasted into the tool
- Language matches the customer's language
- I changed the first and last sentence to my own words
- If the customer is angry, I did not use the word "policy" in the first three lines

T3 · Escalation note

ISSUE .....

HISTORY (dates) .....

DONE .....

BLOCKER .....

ASK .....

RISK (deadline) .....

T4 · Shift handover

BREACH RISK .....

PROMISES DUE .....

OPEN CASES .....

WATCH OUT .....

T5 · Macro card

Macro name .....

When to use .....

Template with [PLACEHOLDERS] .....

Risk (low / medium / high) .....

Approved by .....

T6 · Self-QA scorecard

Criterion	0-2	Note
Accuracy — every fact traceable		
Ownership — one clear action		
Tone — matches customer state		
Resolution — next step with a date		
Compliance — no over-promise, no data leak		

Under 8 out of 10: fix before sending.

T7 · Weekly learning log

Week

Prompt I reused most

Case where AI saved me time

Case where AI was wrong, and how I caught it

One macro or article I wrote

T8 · Career evidence sheet

Target role

Three artefacts I have built

Two metrics I improved, with before and after

Skill gap and how I am closing it

The ask, and the date I will make it

PART 11

Metrics and red flags

What your scorecard actually measures, and the 15 AI habits that get agents pulled up

11.1 The six numbers on your dashboard

Metric	What it really measures	How AI use changes it
AHT — average handle time	Speed per contact, including hold and after-call work.	Falls fast on drafting and summarising. Falls fastest on after-call work, which is where most agents waste the most time.
FCR — first contact resolution	Whether the customer had to come back.	Rises only if you check the reply against the case facts before sending. Careless AI use lowers it, because plausible-sounding wrong answers create repeat contacts.
CSAT	The customer's rating of the interaction, not the outcome.	Rises when the reply is specific and short. Falls when it reads like a template — the single most common AI side effect.
QA score	Compliance with a written rubric, sampled.	Depends entirely on the pre-send check. Auditors now look for invented policy, over-promising and generic phrasing.
Repeat contact rate	How often the same issue comes back within a window.	The clearest signal of bad AI use. Track it weekly against your own output.
Adherence / occupancy	Whether you were available when scheduled.	Unaffected by AI — and worth saying out loud, because it is the number managers trust when they doubt everything else.

11.2 The 15 red flags

Every one of these has been seen on a real floor. Read the list once and you will never be the example in a training deck.

1. **Pasting live customer data into a personal AI account.** The fastest way to end a contract. Use only approved tools, or work from redacted notes.
2. **Sending an invented date, amount or policy clause.** One wrong promise becomes a complaint about you, not about the AI.
3. **Opening with "I hope this email finds you well".** Instant template signal, and it wastes the only line the customer reads carefully.
4. **Three paragraphs of apology before any information.** Reads as evasive. One apology, then facts.
5. **Em-dashes and words like "delve", "moreover", "rest assured".** These are the fingerprints auditors use to spot unedited output.
6. **Identical structure across five replies in a row.** Same numbered list, same closing. Vary it, or a customer will notice before an auditor does.

7. **Promising compensation the SOP does not allow.** The customer will hold you to it, and the company will not back you.
8. **Answering a question the customer did not ask.** Happens when the prompt has no customer-state line.
9. **Using AI for a legal, medical or safety-adjacent reply.** Escalate those. No prompt fixes a liability.
10. **Letting the AI decide eligibility.** Warranty, refunds, KYC — the decision comes from the system; the AI only writes it.
11. **Forgetting the ticket note.** A great reply with a blank disposition is an incomplete case.
12. **Translating a policy clause into Hindi or Tamil by machine and sending it unchecked.** One wrong word becomes a mis-sold term.
13. **Arguing with a customer using AI-generated logic.** It escalates faster than a plain refusal.
14. **Hiding AI use from your TL.** If your output suddenly triples, they will ask. Have the honest answer ready — Part 9's prompt P51 is that answer.
15. **Believing the tool is right because it is confident.** Confidence is a writing style, not evidence. That is the whole reason the CHECK block exists.

11.3 What "good" looks like, in one reply

Bad: "Dear Valued Customer, We sincerely apologise for the inconvenience caused. Rest assured, your concern has been escalated to the concerned team and we will revert at the earliest. Kindly bear with us."

Good: "Your package has not moved from the Nagpur hub since Tuesday — that is on us to chase, not on you to wait for. I have raised a trace with the courier this morning and I will message you by 6 pm tomorrow with either a new delivery date or a replacement dispatch, whichever you prefer. If I miss that time, reply here and I will escalate it to my supervisor directly. — Priya, ticket #48211."

Same situation. The second one names the fact, takes ownership, gives a time, offers a choice and hands the customer a lever. It is also shorter. That is the whole craft.

PART 12

The 30-day plan

Twenty minutes a day, four weeks, ending with an artefact you can show your TL

You do not need to finish this kit in one sitting. Work it in this order and by day 30 you will have a prompt set, a macro library and a documented result. Each week has one outcome; the daily tasks are just the route.

Week 1 — Set up and stop the leaks

Outcome: an approved tool, a clean data habit, and three prompts you can use without thinking.

- **Day 1:** Find out which AI tool your company permits on the floor. Write the answer down. If the answer is "none", you are on the personal-device path for the rest of this plan.
- **Day 2:** Read Part 2 again and write your own strip-list on a sticky note. Put it on your monitor.
- **Day 3:** Run P2 (the blank skeleton) on yesterday's easiest case. Compare the draft with what you actually sent.
- **Day 4:** Run P3 (delayed order) on a real case from your queue. Edit the output to your own words.
- **Day 5:** Run P5 (refund status). This is the one that saves you from the worst complaints. Note the two facts you always need.
- **Day 6:** Build your first macro card (T5) from the reply you sent on day 4.
- **Day 7:** Rest. Read Part 11's red-flag list once.

Week 2 — The hard conversations

Outcome: three de-escalation replies you have actually used, and one handover note your TL compliments.

- **Day 8:** Run P15 on an angry case. Read the draft, then delete any line that sounds like a policy recital.
- **Day 9:** Run P13 (third follow-up) on the oldest open case in your queue. Send the edited version.
- **Day 10:** Run P22 on a draft you were about to send. Count how many filler phrases it removes.
- **Day 11:** Run P24 or P25 for one Hinglish or Hindi reply. Read it aloud before sending.
- **Day 12:** Run P34 (shift handover) at the end of your shift. Give it to the next agent.
- **Day 13:** Run P21 (escalation note) on your most stuck case. Send it to your TL.
- **Day 14:** Rest. Update your learning log (T7) with the week's two best and worst outputs.

Week 3 — Speed and quality together

Outcome: a macro library of 8, one knowledge-base article, and a self-QA habit that survives a busy shift.

- **Day 15:** Run P36 on your last 10 sent replies. Keep the macros that survive your own review.
- **Day 16:** Run P41 (self-QA) before sending, on every case, for one full shift. Note your average score.
- **Day 17:** Run P35 on a case you resolved this week. Submit the article if your team has a KB process.
- **Day 18:** Run P38 (three lengths) for a case you usually over-explain.
- **Day 19:** Run P43 or P44 if you have access to ticket data. If not, skip to P47.
- **Day 20:** Run P47 (audit your last 10 replies). Pick the one pattern to fix.
- **Day 21:** Rest. Fill T6 for your best and worst reply of the week.

Week 4 — Make it visible

Outcome: a résumé bullet set, a transfer ask, and one number you can quote.

- **Day 22:** Run P49 (résumé bullets). Save the output.
- **Day 23:** Run P51 (interview answer) and record yourself saying it once.
- **Day 24:** Run P56 (self-review). This is the document that starts a promotion conversation.
- **Day 25:** Run P50 (transfer email). Send it, or save it for your next one-to-one.
- **Day 26:** Run P46 (process fix request) on the problem you have complained about most this month.
- **Day 27:** Fill T8 (career evidence sheet). Three artefacts, two metrics.
- **Day 28:** Show one artefact to your TL — the macro library, the KB article or the process request. Ask for one piece of feedback.
- **Day 29:** Update your learning log with the month's result: the number that changed.
- **Day 30:** Decide the next 90 days: conversational AI copilot work, CX insights, QA, or team lead. Write it down and put a date on the ask.

The honest version: if you do only five things from this plan, do days 1, 2, 3, 16 and 24. Those five cover the tool, the data rule, the skeleton, the self-check and the evidence. Everything else is refinement.

PART 13

Sources and verification

Every external claim in this kit, with where it came from and when it was checked

This kit contains no invented statistics. The figures in Part 1 and Part 2 come from the following sources, checked on 12 November 2026. Where a source is a survey with a limited sample, the limitation is stated in the text.

Claim	Source
Domestic BPO hiring +12% YoY in H1 FY27; chat and non-voice support +38%; voice and blended +6%; chat quality control mentions +246%; voice modulation +191%; inbound +172%; outbound +148%; persuasion +57%; customer handling +48%; complaint handling +33%; problem-solving +13%; regional language posts +81%; English requirements -32%	Apna platform hiring data for H1 FY27, as published in a DQ India interview with Apna's leadership, 11 November 2026
31% of organisations at limited production with voice AI; ~13% scaled across several journeys; more than one-third support at least three Indian languages in production; 61% reported more than 20% cut in cost per eligible interaction; 30% of scaled organisations reported positive revenue effect; 68% saw returns within 6-24 months; two-thirds expect budgets up to +50% over two years	India Voice AI Readiness 2026, Nasscom with Krisp, released 8 October 2026, survey of more than 140 organisations
86% of employers report AI impact on roles; 35% significant redefinition; 42% of employees anxious about AI disrupting jobs; ~65% learning, lacking confidence or with no exposure; ~73% learning through self-driven channels; 40% prefer demonstrable AI skills over a degree	Nasscom, India's AI Talent Inflection Point: From Skill Gaps to Competitive Advantage
Voice agent role evolving into conversational AI copilot (NLP, real-time dialogue management, prompt writing); customer support analyst evolving into CX insights analyst (journey analytics, behaviour modelling)	Nasscom, India's Workforce Transformation Opportunity in the AI Era
BPM employs about 1.65 million workers in call centres, payroll and data handling; pure voice processes estimated at 1.1-1.3 million	Reuters, October 2025; The Economic Times, 10 November 2026
67% feel unsure how to word a prompt; 38% hesitate at least weekly; 27% said prompting took longer than the task; 63% rewrite at least once	Hostinger survey of 1,002 US AI users, October 2026, published 11 November 2026. US sample — treated as directional only
ChatGPT Free: unlimited text chats on GPT-6, capped uploads, images, voice and deep research. Claude Free: Sonnet and Haiku, up to five projects, limits reset every five hours, no image generation. Gemini Free: Flash-Lite, Deep Research, image generation, Gemini Live, Canvas, Gems, 15 GB, compute-based limits refreshing every five hours to a weekly cap. Copilot free app: chat only; Copilot in Office apps needs Microsoft 365	Vendor pricing pages as summarised in independent comparisons checked 3-5 November 2026
DPDP Rules 2025 notified 13 November 2025 (G.S.R. 843(E)); consent-manager provisions from 13 November 2026; full data fiduciary obligations and the penalty schedule from 13 May 2027	Ministry of Electronics and Information Technology notification; PIB release, 14 November 2025; phased timeline as published by MeitY

On dates: hiring data, tool plans and AI products change monthly. The structural advice in this kit — the six-block skeleton, the strip-list, the pre-send check — does not. When a number here looks old, check the

> source; when a habit here looks obvious, it is still the habit that separates the agents who get promoted from the ones who get audited.
