THE NEET 2027 STARTER HANDBOOK

Eight months to one Sunday in May — the complete, fact-checked starter kit for India's biggest entrance exam

180 x 4

QUESTIONS, MARKS
EVERY 60 SECONDS

90 / 360

BIOLOGY QUESTIONS
AND MARKS AT STAKE

22.8 LAKH

CANDIDATES IN THE
2026 RACE

8 MONTHS

FROM SEPTEMBER 2026
TO MAY 2027

Every date, rule and number in this handbook was verified in September 2026 against the official NTA Information Bulletin for NEET (UG) 2026, NTA result statistics, the NMC seat matrix and MCC counselling documents. Everything not yet notified for 2027 is clearly marked as expected.

WHAT'S INSIDE

Table of Contents

1. The Clock That Starts Now
2. What NEET Actually Is
3. The 2026 Lesson: A Cancelled Paper and a Re-Exam
4. The Exam, Question by Question
5. NEET 2027: The Expected Timeline
6. Who Can Sit: Eligibility Decoded
7. The Numbers That Define the Race
8. Seats, Quotas and What a Score Buys
9. The Syllabus, Sorted
10. The Biology Playbook (360 Marks)
11. The Chemistry Playbook (180 Marks)
12. The Physics Playbook (180 Marks)
13. The Syllabus Map, Chapter by Chapter
14. NCERT First, Then the Right Books
15. The Eight-Month Runway, Month by Month
16. A Day That Actually Works
17. Deep Work: Phones, Slumps and Sleep
18. Mock Tests and the Error Log
19. Boards and NEET Together
20. The Dropper Track
21. Registration: The 2026 Template
22. Exam Day: 180 Minutes, Executed
23. After the Exam: Result to Allotment
24. For Parents: The Support Playbook
25. Twenty Questions, Answered Straight
26. The Master Checklist
27. Sources and Official Links

Read it cover to cover once, then use the playbooks and the monthly plan as working documents for the rest of the season.

CHAPTER 1

The Clock That Starts Now

If you are reading this in September 2026, you have roughly eight months before India's biggest entrance exam — one Sunday in May 2027 — decides the next six years of your life. That is enough time to build a serious score from wherever you are standing today: Class 11, Class 12, or a repeat attempt. It is not enough time to waste a month of it deciding.

NEET is a volume game played on a surprisingly small field. The syllabus is the NCERT Biology, Chemistry and Physics of Classes 11 and 12. The paper asks 180 multiple-choice questions in 180 minutes. Every candidate who beat you last year did not know more books than you will finish by December — they knew the same books more times.

This handbook is a starter kit, not a textbook. It tells you what the exam is, what the rules are, what the numbers say, where the marks actually come from, and what to do each month between now and the Sunday in May. Every date, fee, cutoff and statistic in it was verified in September 2026 against official NTA, NMC and MCC sources — and anything that is still a forecast for 2027 is labelled as one, because guessing at an exam's rules is how seasons get ruined.

Who this is for:

- Class 12 students sitting Boards and NEET in the same season, who need one system that serves both.
- Class 11 students building a foundation early enough to make 2027 feel comfortable instead of compressed.
- Droppers and repeaters who know the syllabus already and need a diagnosis-first rebuild, not a rerun.
- Parents who want the timeline, the costs and the scam-traps in plain language.

THE ONE RULE THIS BOOK RUNS ON

Facts about the exam come only from official sources: the NTA Information Bulletin and neet.nta.nic.in, the NMC seat matrix, and MCC counselling documents. Study advice is clearly separated from exam facts, and every 2027 date that is not yet notified is marked as expected.

CHAPTER 2

What NEET Actually Is

One exam, every medical seat

NEET (UG) is the single national entrance test for undergraduate medical education in India. The National Testing Agency (NTA) conducts it, and its scores decide admission to MBBS and BDS courses, and — under the laws that created the National Medical Commission, the National Commission for Indian System of Medicine and the National Commission for Homoeopathy — to BAMS, BUMS, BSMS and BHMS courses, plus BVSc and AH and B.Sc. Nursing programmes such as the Military Nursing Service, which require a NEET score. There is no second door: private colleges, deemed universities, AIIMS and JIPMER all admit through the same NEET merit list.

The National Medical Commission (NMC), not NTA, notifies the syllabus and the exam structure — NTA runs the exam machine itself. That division matters to you: when 2027 rules are announced, the Information Bulletin on neet.nta.nic.in is the only document that counts.

What it is not

NEET is not an aptitude test. It is a syllabus-coverage test with negative marking, built almost entirely on NCERT content. It rewards candidates who have read the same books repeatedly and practised under a clock, not candidates who own the most expensive coaching material. The 2026 cycle proved the point again: of the 138 candidates who scored above 690, more than 93 percent were appearing for the first time, and 99 percent were between 17 and 19 years old — ordinary students on an ordinary timeline who executed well.

Fact	Detail (verified for the 2026 cycle)
Conducting body	National Testing Agency (NTA)
Syllabus authority	National Medical Commission (NMC)
Courses covered	MBBS, BDS, BAMS, BUMS, BSMS, BHMS, BVSc and AH, B.Sc. Nursing (incl. MNS)
Official website	neet.nta.nic.in (results also on nta.ac.in)
Frequency	Once a year
Mode (2026)	Pen-and-paper, single day, single shift (2:00 to 5:00 PM IST)

CHAPTER 3

The 2026 Lesson: A Cancelled Paper and a Re-Exam

The 2026 cycle was the most turbulent in NEET's history, and every aspirant starting now should understand what happened — not for the drama, but for what it teaches about building a preparation that survives surprises.

The timeline, in brief. NEET (UG) 2026 was first held on 3 May 2026, after a registration window that ran from 8 February to 8 March. On 12 May, NTA cancelled the result after allegations that the question paper had been leaked — an email had pointed out overlaps between a circulated guess paper and the actual 3 May paper. A re-examination was held on 21 June 2026 across 5,440

centres in 551 cities in India and 14 cities abroad. Results were declared on 16 July 2026, in time to keep the medical admission calendar on track. The CBI took over the leak investigation and made arrests through the year.

Three lessons for your 2027 season:

- 1 Depth beats format. Whether the paper is printed or on a screen, administered in May or June, NCERT mastery, formula recall and timed MCQ practice are what convert to marks. Prepare the content, and the format takes care of itself.
- 2 Do not build your season around rumours. In 2026, fake 'leaked papers', guessed answer keys and reschedule rumours consumed more aspirant hours than any chapter of Physics. Official notices come from one place: neet.nta.nic.in.
- 3 The system recovers, and so can you. A cancelled paper and a six-week delay still ended in a completed counselling calendar. Candidates who kept a steady daily rhythm through the chaos were the ones who were ready on 21 June.

A NOTE ON THE 2027 MODE

The 2026 exam was pen-and-paper on OMR sheets. Following the leak, media reports suggested the exam could move to computer-based testing in future cycles. Nothing had been notified as of September 2026. Treat mode as unknown: if you practise on paper, also take a few online mocks each month so a screen feels ordinary either way.

CHAPTER 4

The Exam, Question by Question

The exam machine is simple, published, and identical for every candidate. Learn it once, properly, and it stops being a source of exam-day anxiety.

The structure of the paper

Subject	Questions	Marks	Share of paper
Physics	45	180	25%
Chemistry	45	180	25%
Biology (Botany + Zoology)	90	360	50%
Total	180	720	100%

All 180 questions are compulsory. There is no optional-question buffer and no internal choice: every candidate answers the same paper. The exam runs for 180 minutes — 2:00 PM to 5:00 PM IST — which is exactly one minute per question, and less than that once you account for OMR shading and review.

Marking, exactly as NTA states it

- Correct answer or the most appropriate answer: +4 marks.
- Any incorrect option marked: -1 mark.
- Unattempted question: 0 marks.
- If more than one option is found correct after review, +4 is awarded to everyone who marked any of the correct options.
- If all options are found correct, +4 goes to every candidate who attempted the question.
- If a question is wrong, dropped, or has no correct option, +4 is awarded to all candidates who appeared — attempted or not.

The last three rules matter more than they look. They mean you should never leave a question blank purely from fear of an incorrect key — but blind guessing is still a losing bet (Chapter 22 shows the arithmetic). They also mean dropped questions are a gift to everyone equally, so do not build a strategy around them.

Language and paper

The 2026 paper was offered in 13 languages: Assamese, Bengali, English, Gujarati, Hindi, Kannada, Malayalam, Marathi, Odia, Punjabi, Tamil, Telugu and Urdu. In 2026, over 18 lakh of the 22.8 lakh registered candidates chose English and about 3.45 lakh chose Hindi. Pick the language you think in, not the one that sounds more serious — the translation of a Biology question you misread is still a misread.

The NEET syllabus is notified by the NMC and is built on the NCERT Class 11 and 12 syllabus. The 2026 Information Bulletin carried the detailed syllabus as Appendix-III, available on the NTA and NMC websites. Chapter 9 sorts it for you.

CHAPTER 5

NEET 2027: The Expected Timeline

Nothing for 2027 has been notified yet — and that is normal. NTA has announced NEET dates in the winter before the exam for years. What you can do now is learn the shape of the calendar from the 2026 cycle, so that when the 2027 Information Bulletin drops, you recognise every page of it.

Event	2026 (actual)	2027 (expected)
Information Bulletin / notification	8 February 2026	February 2027
Registration window	8 Feb - 8 March (fee to 11:50 PM)	About 4 weeks, Feb - March
Correction window	10 - 12 March	A few days after closing
City intimation slip	April	April
Admit card	April (about 2 weeks before)	April 2027
Exam day	3 May (Sunday); re-exam 21 June	First or second Sunday of May 2027
Provisional answer key and challenges	Within days of the exam	May - June
Result	16 July (re-exam cycle)	June 2027
Counselling (MCC AIQ) begins	5 August	July - August 2027

The most likely 2027 exam date is the first Sunday of May — 2 May 2027 — based on the pattern of recent years (5 May 2024, 4 May 2025, 3 May 2026). Treat that as a planning anchor, not a promise; NTA confirms dates only in the official notification.

WHAT TO DO WITH THIS TABLE NOW

Set one recurring reminder: check neet.nta.nic.in in the first week of February 2027. Missing the registration window has no late-fee rescue — it means waiting for 2028. Everything else in the table can be handled calmly after the bulletin arrives.

And keep your documents ready before the window opens, not during it: a recent passport photograph, a scanned signature, address proof, and category certificate if you claim one. Chapter 21 has the full registration walkthrough.

CHAPTER 6

Who Can Sit: Eligibility Decoded

NEET's eligibility rules are short, and every one of them has ended candidacies when discovered late. Read this chapter twice — once now, once in January.

Rule	What it means
Age	You must turn 17 by 31 December of the admission year. For NEET 2027, that means born on or before 31 December 2010.
Subjects in Class 12	Physics, Chemistry and Biology / Biotechnology, with English. The 2026 cycle allowed PCB even as additional subjects, with documentary proof at counselling.
Minimum aggregate in PCB	50% for unreserved; 40% for SC / ST / OBC; 45% for unreserved PwBD — in Physics, Chemistry and Biology / Biotechnology combined.
Attempts	There is no cap on the number of attempts. Candidates may appear any number of years.
Nationality	Indian nationals, NRIs, OCIs, PIOs and foreign nationals are all eligible; some seat categories (like NRI-quota seats) have their own rules.
Qualifying-exam codes	The bulletin assigns codes 01 to 07 to the kind of Class 12 / equivalent qualification you hold. Code 02 is the standard Indian Class 12 with PCB.

The 50/40/45 rule is the quiet trap for droppers and for students who treated Boards casually in their first pass. It is checked at admission, not at registration — a NEET score without the Class 12 aggregate is a score that cannot be cashed. If your board marks are the weak link, Chapter 19 shows how to protect them without derailing NEET prep.

One more check that belongs in September, not March: if you plan to claim a category (OBC-NCL, EWS, SC, ST or PwBD), verify that the certificate exists, is in the prescribed format, and is in the name of the person filling the form. Category claims that fail document verification at counselling are treated as unreserved — and lost seats.

CHAPTER 7

The Numbers That Define the Race

You cannot set a target score without knowing the field. Here is the field, from NTA's own result statistics for 2026.

Year	Registered	Appeared	Qualified
2023	20,87,462	20,38,596	11,45,932
2024	24,06,079	23,33,297	13,16,268
2025	22,76,069	22,09,318	12,36,531
2026	22,79,743	19,99,895	11,21,185

In 2026, 11.21 lakh candidates qualified — about 56 percent of those who appeared — and the highest score was 715 out of 720, shared by two candidates. Just 19 candidates crossed 700; 1,492 crossed 650; 10,160 crossed 600; and 90,780 crossed 500. Those numbers should recalibrate every 'just need 650' plan you have heard: 650 put you among the top 1,500 candidates

in the country in 2026.

Qualifying vs getting a seat

NTA sets qualifying cutoffs as percentiles, not marks. In 2026 the unreserved / EWS cutoff was the 50th percentile — a range of 213 to 715 marks — while OBC, SC and ST candidates needed the 40th percentile, 177 marks and above. For perspective, in 2025 the unreserved range started at 144 marks, and in 2024 at 162: the qualifying line moves with the paper's difficulty and the cohort, so never plan to 'the cutoff'.

Qualifying, however, only makes you eligible for counselling. Seats go at much higher scores. With roughly 1.37 lakh MBBS seats nationally (Chapter 8) and 11.2 lakh qualified candidates, the median qualifier does not get a government MBBS seat. Realistic bands from recent counselling cycles:

- 670+ competes for the top government colleges through All India Quota.
- 620 - 670 is competitive for government MBBS in most states, depending on domicile and category.
- 560 - 620 keeps government MBBS in reach in several states and for reserved categories, and opens government BDS and AYUSH more widely.
- Below 500, the realistic pool is private colleges (with their fees), deemed universities, and allied courses — decide deliberately, not in the last round of counselling.

One number that should genuinely encourage you: in 2026, women both outnumbered men among qualifiers (58 percent) and qualified at a higher rate (56.8 vs 55.1 percent). And of the 138 candidates above 690 marks, 99 percent were 17 to 19 years old — this exam is won by students your age on their first attempt, not by an unseen army of veterans.

CHAPTER 8

Seats, Quotas and What a Score Buys

For 2026-27, the NMC's seat matrix counted 1,36,939 MBBS seats across 823 medical colleges (excluding the Institutes of National Importance, admitted separately through the same NEET score), with 9,911 new seats added that year. Add BDS, AYUSH, nursing and veterinary seats and the total is larger still — but MBBS at a government college remains the prize most of the 20-lakh-strong field is running for.

How those seats are divided

Every government medical college contributes 15 percent of its seats to the All India Quota (AIQ). The remaining 85 percent — plus private college seats in that state — are filled by the state's own counselling authority. On top of the AIQ, the Medical Counselling Committee (MCC) of the DGHS handles 100 percent of seats at AIIMS institutions, JIPMER, deemed universities, and central universities like BHU, AMU and Delhi University colleges, plus ESIC and AFMC registration.

Track	Who runs it	What it covers
AIQ	MCC (mcc.nic.in)	15% of govt college seats, all India, no domicile bar
Central / deemed	MCC	100% AIIMS, JIPMER, BHU, AMU, DU colleges, deemed universities, ESIC
State quota	State authorities	85% of govt seats + private colleges, domicile rules apply

Reservation in the AIQ follows the central policy: 15 percent SC, 7.5 percent ST, 27 percent OBC (non-creamy layer), 10 percent EWS, and 5 percent horizontal PwBD. States run their own — often larger — reservation lists for the 85 percent quota, which is one reason your domicile state matters as much as your score band.

The counselling sequence

MCC counselling runs in rounds — Round 1, Round 2, a Mop-Up round for the still-unallotted, and a Stray Vacancy round. In Round 1 you get a 'free exit': you can walk away from an allotted seat with your security deposit refunded. After Round 2, exiting costs the deposit — Rs. 10,000 for the AIQ track (Rs. 5,000 for SC / ST / OBC / PwBD) and Rs. 2,00,000 for deemed universities. Register separately on your state portal too: most candidates do both, and state quota is where the majority of seats live.

FEE REALITY CHECK

Government college MBBS fees are a few thousand rupees a year in most states; private and deemed-college fees run into lakhs per year. Before counselling season, sit with your family and decide the financial ceiling — a seat you cannot pay for is not a seat.

CHAPTER 9

The Syllabus, Sorted

The NMC-notified syllabus is the NCERT Class 11 and 12 syllabus of Physics, Chemistry and Biology, published as Appendix-III of the NTA bulletin. 'Covering the syllabus' is therefore a bounded, finishable job — roughly 100 chapters across two years of school. What separates scores is not which chapters you touched, but how many times you returned to the high-yield ones.

Where the marks live

Subject	Questions	Marks	How it behaves
Biology	90	360	Direct NCERT lines, diagrams, exceptions — factual recall plus careful reading
Chemistry	45	180	Physical (calculation), Organic (mechanism and reactions), Inorganic (memory)
Physics	45	180	Concept plus numerical — the rank-shifter for serious candidates

Within each subject, five-year analyses of previous papers by coaching platforms (Careers360, Physics Wallah, Class24 and others) find a stable pattern: a third of the chapters carry roughly two-thirds of the questions. The subject playbooks in Chapters 10 to 12 name those chapters with their typical question counts, so 'high-yield' here means 'consistently asked over the last five years', not a leaked promise.

The study order that works

- 1 Finish a chapter's NCERT reading first — every line, including captions, examples and the summary points.
- 2 Solve the previous-year questions from that chapter the same week, untimed, to check comprehension.
- 3 Add one layer beyond NCERT only where the PYQs show it is needed (a reference book for numericals in Physics, extra practice for Organic).
- 4 Return to the chapter on a 1 - 7 - 30 rhythm: re-read and re-solve within a week, then test it again within a month.

Do not study subject blocks sequentially — 'Biology till December, then Physics' is how January becomes a panic. Rotate all three subjects every week, because NEET rewards breadth held simultaneously.

CHAPTER 10

The Biology Playbook (360 Marks)

Biology is half the paper — 90 questions, 360 marks — and it is the most NCERT-faithful section: in a typical year, most Biology questions can be answered from lines that exist in the NCERT textbook, if you have read them carefully enough times. If your Biology is strong, the paper is a reading test; if it is weak, no amount of Physics heroics can buy back 360 marks.

High-yield area	Typical questions (5-yr avg.)	Priority
Human Physiology (all chapters)	10 - 12	Highest
Genetics and Evolution (Principles + Molecular Basis)	8 - 10	Highest
Biotechnology (both chapters)	5 - 6	Highest
Ecology and Environment	5 - 6	Highest
Cell biology (unit of life + cell cycle)	6 - 8	High
Plant Physiology	5 - 6	High
Reproduction (plants + human)	5 - 6	High
Animal Kingdom and structural organisation	6 - 8	High

At the single-chapter level, Molecular Basis of Inheritance (about 7 questions a year on the five-year average), Biotechnology: Principles and Processes (about 6), and Human Health and Disease are the perennial heavyweights. One chapter — Human Physiology as a block — alone outweighs any three Physics chapters combined.

How to actually study it

- Read NCERT with a pen, not a highlighter: convert every paragraph into one recall question in your own words.
- Learn every NCERT diagram until you can redraw and label it from memory — pedigree analysis, DNA replication, the human heart, the nephron, the menstrual cycle, ecological pyramids.
- Keep an exceptions notebook: NEET's Biology traps are NCERT's fine print (which hormone is not a peptide, which algae stores floridean starch, which vessel carries oxygenated blood in the fetus).
- Recite the summary points of each chapter aloud before sleeping — recall practice, not re-reading, is what moves factual content into long-term memory.

THE 300-GATE

A realistic first target for serious aspirants is 300+ of 360 in Biology (75+ of 90 correct, at most a handful wrong). Every mark you drop here must be earned back in Physics, where marks are four times harder to come by.

CHAPTER 11

The Chemistry Playbook (180 Marks)

Chemistry is 45 questions and, for most candidates, the highest marks-per-hour subject on the paper: a large share of its questions are one-step recall or one-line application. It behaves as three different subjects — train them separately.

Branch	Typical questions	Character
Physical Chemistry	15 - 18	Calculations: mole concept, equilibrium, thermodynamics, electrochemistry, kinetics, solutions
Organic Chemistry	13 - 16	Mechanisms, name reactions, conversions and GOC logic
Inorganic Chemistry	12 - 15	NCERT memory: periodicity, bonding, p / d / f block, coordination compounds

High-yield chapters by five-year averages: Aldehydes, Ketones and Carboxylic Acids (about 4 questions a year), basic principles of Organic Chemistry (about 3), Hydrocarbons (about 3), Chemical Bonding and Molecular Structure (about 3), Coordination Compounds (about 3), Equilibrium (about 3) and Chemical Kinetics (about 3), with Biomolecules and Chemistry in Everyday Life as easy, finishable marks.

The three-branch method

- Physical: keep a formula-on-one-page sheet per chapter and practise numericals daily until units and approximations are reflex. Most lost marks are arithmetic, not concepts.
- Organic: master GOC and reaction mechanisms once, properly — then every named reaction becomes a consequence rather than a memory load. Write each mechanism out by hand at least twice.
- Inorganic: this is straight NCERT line-by-line territory, like Biology. Revise it weekly with your exceptions notebook; never leave it for a single 'final month' pass.

CHAPTER 12

The Physics Playbook (180 Marks)

Physics decides ranks, because it is the section half the field fears. The syllabus is NCERT-based but the questions are numericals in disguise: formulas are easy to memorise and useless until you can deploy them on an unseen two-step problem in ninety seconds.

Block	Typical questions	Key chapters
Mechanics	13 - 15	Kinematics, laws of motion, work-energy, rotation, gravitation, properties of matter
Electrodynamics	8 - 10	Current Electricity (about 4 / yr, the single highest-yield chapter), electrostatics, magnetism, EMI and AC
Optics	5 - 6	Ray Optics (about 3 / yr), Wave Optics

Block	Typical questions	Key chapters
Modern Physics and Semiconductors	5 - 6	Dual nature, atoms and nuclei, semiconductors
Heat, waves and oscillations	5 - 6	Thermodynamics and KTG, oscillations, waves

How to actually study it

- Derivations first, formulas second: if you can re-derive a result, you cannot be defeated by a rearranged version of it.
- Numericals daily, from day one — 20 focused problems beat 100 passive solved examples. Time yourself loosely (two minutes a problem) so speed grows without panic.
- Maintain a conditions notebook: every formula with the conditions under which it holds (ideal gas, constant acceleration, thin lens, small angle). Half of NEET Physics tricks are broken assumptions.
- Practise error-analysis on every wrong numerical: was it the concept, the algebra, or the units?

A note on Calculus: NEET does not require it, but comfort with basic algebraic manipulation and ratios is non-negotiable. If Class 11 Maths fundamentals are shaky, spend two weeks on fractions, indices, trigonometric ratios and graph-reading — it pays across Physics and Physical Chemistry.

CHAPTER 13

The Syllabus Map, Chapter by Chapter

This is the map of the territory: every NCERT chapter that the NMC-notified NEET syllabus covers, with the yield rating each chapter earns from five-year PYQ analyses. Print it mentally, and let it be the checklist your Sunday review runs against. (A few legacy chapters — States of Matter, Hydrogen, s-Block, Polymers, Chemistry in Everyday Life — were rationalized out of the NEET syllabus in the 2024 revision, and are not listed. The live authority is always Appendix-III of the current bulletin.)

Biology — Class 11

Chapter	Yield	Chapter	Yield
The Living World	Low	Photosynthesis in Higher Plants	High
Biological Classification	High	Respiration in Plants	High
Plant Kingdom	High	Plant Growth and Development	Medium
Animal Kingdom	Very high	Breathing and Exchange of Gases	Medium
Morphology of Flowering Plants	High	Body Fluids and Circulation	High
Anatomy of Flowering Plants	High	Excretory Products and Elimination	High
Structural Organisation in Animals	High	Locomotion and Movement	Medium
Cell: The Unit of Life	Very high	Neural Control and Coordination	High
Biomolecules	Very high	Chemical Coordination and Integration	High
Cell Cycle and Cell Division	Very high		

Biology — Class 12

Chapter	Yield	Chapter	Yield
Sexual Reproduction in Flowering Plants	High	Human Health and Disease	Very high
Human Reproduction	Very high	Microbes in Human Welfare	High
Reproductive Health	High	Biotechnology: Principles and Processes	Very high
Principles of Inheritance and Variation	Very high	Biotechnology and its Applications	Very high
Molecular Basis of Inheritance	Very high	Organisms and Populations	High
Evolution	High	Ecosystem / Biodiversity and Conservation	Very high

Physics — Classes 11 and 12

Class 11	Yield	Class 12	Yield
Units and Measurement	Medium	Electric Charges and Fields	High
Motion in a Straight Line	Medium	Electrostatic Potential and Capacitance	Very high
Motion in a Plane	High	Current Electricity	Very high
Laws of Motion	High	Moving Charges and Magnetism	High
Work, Energy and Power	High	Magnetism and Matter	Medium
System of Particles and Rotation	Very high	Electromagnetic Induction	High
Gravitation	High	Alternating Current	High
Mechanical Properties of Solids	Medium	Electromagnetic Waves	Low
Mechanical Properties of Fluids	High	Ray Optics and Optical Instruments	Very high
Thermal Properties of Matter	Medium	Wave Optics	High
Thermodynamics	High	Dual Nature of Radiation and Matter	High
Kinetic Theory	Medium	Atoms / Nuclei	High
Oscillations	High	Semiconductor Electronics	Very high
Waves	High		

Chemistry — Classes 11 and 12

Class 11	Yield	Class 12	Yield
Some Basic Concepts of Chemistry	High	Solutions	High
Structure of Atom	High	Electrochemistry	High
Classification of Elements and Periodicity	High	Chemical Kinetics	High
Chemical Bonding and Molecular Structure	Very high	d- and f-Block Elements	High
Thermodynamics	High	Coordination Compounds	Very high
Equilibrium	Very high	Haloalkanes and Haloarenes	High
Redox Reactions	Medium	Alcohols, Phenols and Ethers	High
p-Block Elements	High	Aldehydes, Ketones and Carboxylic Acids	Very high
Organic Chemistry: Basic Principles	Very high	Amines	High
Hydrocarbons	Very high	Biomolecules	High

How to use the ratings: 'Very high' chapters are your first-pass priorities — cover them by December and revise them monthly. 'Medium' and 'Low' chapters are still finishable marks; schedule them into the November and January gaps, never skipped, just sequenced. A chapter left to April is a chapter you will meet as a stranger on exam day.

CHAPTER 14

NCERT First, Then the Right Books

Every topper's booklist is shorter than every aspirant's shelf. Here is the honest version: NCERT plus one practice layer per subject, and previous-year questions as the connective tissue.

Layer	What it is	Why
NCERT (11 and 12)	The primary text — Biology and Chemistry especially, line by line	The syllabus and most questions are built on it
NCERT Exemplar	Official higher-order MCQs across all three subjects	The closest thing to official NEET-level practice
PYQ book (last 10+ years)	Chapter-wise previous-year questions, any standard publisher	Your map of what the exam actually asks
Physics numericals	One standard objective series (the DC Pandey / Cengage class of books)	Volume practice for the numerical core
Biology boost	One MCQ volume keyed to NCERT (the MTG-class of books)	Volume recall practice beyond Exemplar

That is the whole list. Add a mock-test series from any of the major coaching platforms when you enter the mock phase (Chapter 18). Anything more is procrastination dressed as diligence — the most common shelf in India is a library of unread 'extra material' bought during moments of anxiety.

Free and official, worth more than paid material: NTA's own previous papers and answer keys on neet.nta.nic.in, the NMC syllabus document, and the official NTA mock interface when it opens. Use them before you buy anything.

THE TELEGRAM TRAP

Every season, channels sell 'leaked papers', 'sure-shot' question banks and paid 'answer-key groups'. In 2026 an actual leak cancelled a national exam — and buyers of such material were the first suspects and the biggest losers. The syllabus is public, the papers are public, and no paid shortcut has ever survived contact with an NTA investigation.

CHAPTER 15

The Eight-Month Runway, Month by Month

Eight months is the honest shape of a first-attempt NEET preparation: long enough to cover everything, short enough that every month has a job. Here is the runway as it should run, from this September to the Sunday in May.

Phase	Months	The job
Foundation 1	Sept - Oct 2026	Class 12 chapters alongside a full Class 11 re-cover; weekly rotation of all three subjects; error log opens
Foundation 2	Nov - Dec 2026	Complete first pass of the whole syllabus; 60% new content, 40% revision; chapter tests weekly

Phase	Months	The job
Consolidation	Jan 2027	Syllabus gaps closed; full-syllabus learning ends; subject-wise tests go timed; registration window watch
Board bridge	Feb - Mar 2027	Board-style written practice with 30 - 40 NEET MCQs daily; one full mock a week
Mock season	April 2027	Two to three full 180-minute mocks a week, each analysed the same day; error-log raids; no new chapters
Taper	Exam week	Sleep protected, light formula and diagram revision, one mock at the real 2 PM slot; nothing new

The week-by-week engine under the phases

Each month above runs on the same four-part weekly cycle. It is deliberately boring — the point of a system is that you stop negotiating with it.

Day	Commitment
Monday - Friday	Concept blocks: new NCERT chapters per the rotation; daily numericals (Physics) and daily recall (Biology)
Wednesday	Chapter test on everything from the previous week — 30 minutes, timed
Saturday	PYQ block: previous-year questions for the week's chapters, plus one section-length timed set
Sunday	The review: error log updated, 30-minute week audit, next week's rotation planned — then a real half-day off

If you are starting from Class 11, compress nothing — just begin Foundation 1 with the Class 11 chapters you are currently studying, and let school run parallel. If you are a dropper, Chapter 20 has your version of this calendar.

The one habit that makes this calendar work is the weekly review: every Sunday, 30 minutes, no exceptions. Which chapters did I touch this week? What did the error log teach me? What is next week's rotation? Eight months of Sundays with that habit is a rank; without it, it is eight months of activity with nothing banked.

CHAPTER 16

A Day That Actually Works

There is no perfect timetable — there is only one you will actually follow for eight months. Two templates that have survived contact with real students; adjust the clock, keep the proportions.

Class 12 student (with school), about 6 - 8 hours of self-study

Slot	Focus
Early morning (60 - 90 min)	New Physics or Chemistry concepts — freshest brain to the hardest subject
School hours	Attend properly; your board syllabus IS the NEET syllabus
After school (90 min)	Biology NCERT reading and recall of the day's chapter
Evening session 1 (60 - 90 min)	Physics / Physical Chemistry numericals
Evening session 2 (60 min)	Chapter MCQs and PYQs of everything touched today
Before bed (30 min)	Error log update + formula / diagram flash-recall

Dropper / repeater, 8 - 10 hours

- Three concept blocks (Physics, Chemistry, Biology) of 90 minutes each, morning to afternoon, one subject per block, all three every day.
- One 90-minute MCQ / PYQ block, alternating subjects day by day.
- One 60-minute revision block reserved for the error log and the week's weakest chapters.
- One full 180-minute mock at exam timing (2 - 5 PM) every week from January, twice a week from April.

Whichever template you use, protect the two bookends: the morning hardest-subject slot and the before-bed recall. Those two slots, held for eight months, do more for a NEET score than anything in between. And sleep is not the flexible line item — seven to eight hours is part of the syllabus, because memory consolidation happens overnight.

CHAPTER 17

Deep Work: Phones, Slumps and Sleep

Eight months of content will not save eight months of bad study conditions. The difference between a 520 and a 620 is usually not knowledge — it is how many of your nominal study hours were actually spent studying.

The phone contract

Every study block you have is competing with a machine engineered to win that competition. Sign a contract with yourself instead of negotiating hourly: the phone lives in another room (not face-down on the desk — another room) during concept blocks; it comes back during meals and the evening break; notifications from every app except family contacts are off for the season. Aspirants fear this will cost them their social life; in practice it costs about ten days of fidgeting and then returns two to three usable hours a day.

Environment beats willpower

- One desk, one purpose: study where you study, scroll where you scroll. The brain learns locations faster than it learns subjects.
- Two-minute rule for starting: begin with the easiest task in the block — copying a formula sheet, re-reading one summary. Starting is the hard part; momentum handles the rest.
- Plan the night before: a written list for tomorrow's blocks removes the morning decision-tax, which is where most blocks quietly die.
- One weekly half-day off, protected like a mock test. Rest that is scheduled actually restores; rest that is stolen mid-afternoon just adds guilt.

The long middle

Every NEET season has a hard stretch — usually December and February — when the excitement of starting has faded, the exam feels distant, and motivation dries up. Plan for it rather than being ambushed by it: in those weeks, drop the target from 'excellent day' to 'scheduled day'. Hit the blocks, hit the review, and let the calendar carry you. Motivation follows action far more reliably than it precedes it, and the 1 - 7 - 30 revision rhythm means even your worst fortnight keeps banking revision.

Sleep is a subject

Memory consolidation happens during sleep — the hours you cut at night are the hours in which today's Biology actually gets filed. Seven to eight hours is the floor for a memory-dependent exam, and the exam-week rule is firmer still: a rested brain out-performs a crammed one on recall speed, and NEET is a recall-speed exam. One habit makes sleep easier: screens off thirty minutes before bed, replaced by the day's formula-sheet and exceptions-notebook recall.

CHAPTER 18

Mock Tests and the Error Log

Mocks are not a test of how much you know. They are the training ground for the only four skills that matter on exam day: reading accuracy, time allocation, negative-marking judgement, and calm. Treated that way, ten well-analysed mocks beat forty casually taken ones.

The 3:1 rule

For every hour you spend taking a mock, spend three hours analysing it. A 180-minute mock earns a 9-hour analysis spread over the following days. Skipping the analysis to take another mock is the single most common way serious aspirants stay stuck at the same score for months.

The error log

Every wrong, guessed or slow question goes into one notebook with four columns — question / topic, what I did, why it was wrong, the fix — sorted into four buckets:

- Didn't know: a content gap — back to that NCERT chapter the same week.
- Knew but calculated wrong: an execution error — practise that computation type daily for a week.

- Knew but ran out of time: a pacing error — your section order or question triage needs work.
- Misread the question: an accuracy error — slow down the first read; underline the stem's ask in every practice session.

By February this notebook becomes your private question bank of everything you once got wrong — and the only revision material you need in the final fortnight.

What a page of it looks like

Question / topic	What I did	Why wrong	Fix and date
Bio: Human Physiology - JGA mechanism	Marked option C	Didn't know: never read that NCERT line	Re-read 19.2 excretion same week (Oct 12)
Phy: Ray Optics - lens-maker numerical	Set up correctly, wrong sign	Knew but calculated wrong: sign convention	Convention drills, 5 per day for a week (Nov 3)
Chem: Coordination - CFSE order	Left blank in the mock	Knew but ran out of time	Section order fixed: inorganic flagged first (Dec 8)

The mock ladder

- 1 October - December: chapter and unit tests, untimed or loosely timed, within a week of studying the chapter.
- 2 January - February: one full 180-question mock a week, at the real 2 - 5 PM slot, OMR sheet if the paper is on paper mode practice.
- 3 March: mocks continue through board season at reduced frequency — even a half-paper keeps the machinery warm.
- 4 April: two to three full mocks a week, each analysed same-day; finish error-log raids of the top ten weak chapters.

CHAPTER 19

Boards and NEET Together

If you are in Class 12, you are not preparing for two exams — you are preparing for one syllabus in two formats. NCERT is the shared base; Boards ask you to write it long, NEET asks you to recognise it fast. The mistake is treating February and March as a 'board break' from NEET.

- Your Class 12 board syllabus is the majority of the NEET syllabus — every board hour is also a NEET hour, if you study the chapters to depth rather than to the syllabus's minimum.
- From November, add one board-style written answer per week per subject: the discipline of structured writing is what the 50% PCB aggregate and your board marks both need.
- Never drop MCQ practice during board months. Thirty to forty NEET MCQs a day — twenty minutes — keeps retrieval speed alive while you practise writing.
- After boards end, you get a clean run of weeks before the May exam: reserve it for full mocks and error-log revision, not for re-learning.

For Class 11 students the pressure is different and lighter: use the year to make Class 11 fundamentals unshakeable, because NEET's hardest questions routinely fuse Class 11 and 12 concepts — genetics on cell biology, electrochemistry on equilibrium, modern physics on mechanics. The 2027 syllabus is close to equally split between the two years.

THE 50 PERCENT CLAUSE

Remember the eligibility rule from Chapter 6: you need 50 percent in PCB (40 for reserved categories) in Class 12 to convert a NEET score into a seat. A brilliant NEET score on a weak board result is a tragedy the rules do not forgive.

CHAPTER 20

The Dropper Track

A repeat year is not a continuation — it is a rebuild. The candidates who gain 100+ marks in a drop year are the ones who started by finding out exactly why last year's score happened, and the ones who gain nothing are those who ran the same year harder. Start with a diagnosis, not a timetable.

- 1 Autopsy your last paper and mocks: for each dropped mark, assign one of the four error buckets from Chapter 18. Patterns will emerge within an hour — most repeat-year losses are 60 percent accuracy and pacing, not knowledge.
- 2 Rebuild from NCERT anyway. Droppers skip the textbook because 'already done' — and lose the direct-line Biology and Inorganic questions that decide ranks. Re-read it with fresh eyes; it is a different book the second time.
- 3 Fix the exam, not just the syllabus: full 180-minute mocks weekly from October, at 2 PM, with the real section order and OMR discipline.

- 4 Guard the aggregates: board percentage rules and the 50 percent PCB clause apply to your existing Class 12 result — check them once, now, before committing the year.

One psychological note that droppers earn the right to hear: the field is not against you. In 2026, of the 138 candidates above 690 marks, more than 93 percent were first-timers — meaning droppers who rebuilt properly still competed at the very top. A diagnosis-first drop year with an error log is a genuine advantage, not a deficit.

CHAPTER 21

Registration: The 2026 Template

The 2027 form will differ in small details from the 2026 one, but the shape below is stable year to year. Treat this as the rehearsal; follow the live 2027 bulletin when it arrives.

Fees in 2026 (in India; Rs. 9,500 abroad)

Category	Fee
General	Rs. 1,700
General - EWS / OBC - NCL	Rs. 1,600
SC / ST / PwBD / Third Gender	Rs. 1,000

Documents to have ready before the window opens

- A recent passport photograph (the bulletin specifies size and format), a scanned signature, and a valid address proof.
- Class 10 certificate or birth proof for the date of birth.
- Category certificate (OBC - NCL / EWS / SC / ST / PwBD) in the prescribed format, issued by the competent authority.
- Citizenship / OCI / NRI documents where applicable.
- DigiLocker or Aadhaar linkage as advised in the bulletin's pre-registration notices.

The ten mistakes that cost seasons

- Waiting for the last day of the registration window — servers slow down and payments fail precisely then.
- Mistyping the name so it does not match the Class 10 certificate.
- Wrong category claim: OBC - NCL claimed without a valid current-year certificate.
- Uploading a photograph that is old, blurred, or wrongly sized — rejected at centre verification.
- Choosing exam cities without checking travel and stay feasibility for the city intimation that comes.
- Missing the correction window (in 2026: 10 - 12 March) after noticing an error.
- Filling PwBD columns when not eligible, or leaving them blank when eligible.
- Paying the fee but not submitting the form — payment alone does not register you.

- Not keeping the confirmation page printout.
- Registering twice with different emails — duplicates get rejected outright.

CHAPTER 22

Exam Day: 180 Minutes, Executed

180 questions, 180 minutes, one mark a minute before overheads. The candidates who finish comfortably are not faster readers — they entered with a plan and refused to improvise mid-paper.

A time plan that works

Block	Minutes	Job
First pass — Biology	50 - 55	All 90 questions: answer, shade in batches of 10, flag doubts
Second pass — Chemistry	45 - 50	All 45: one-step-first policy, park the long numericals
Third pass — Physics	40 - 45	Easy and medium first; park multi-step numericals
Final sweep	25 - 35	Parked questions: attempt if you can eliminate two options; verify OMR completeness

Biology first is deliberate: it is your fastest, highest-yield section, and banking 300+ marks in the first hour settles nerves for the two sections that follow. Adjust the order if you are genuinely stronger elsewhere — but fix the order by February, in mocks, and never change it on exam day.

The negative-marking arithmetic

Each question is worth +4 for a right answer and -1 for a wrong one, so a pure guess (one option in four) has an expected value of zero — 0.25 chance of +4 equals 0.75 chance of -1. Guessing is therefore only worthwhile when you can eliminate at least one option: eliminate one and the expected value turns positive (+0.25); eliminate two and it jumps to +1. That single habit — never guess on four options, always guess on two — is worth real marks across a 180-question paper.

- Shade the OMR in batches and check the question-number alignment every batch — one misalignment can ruin a whole row.
- Do not leave the OMR for the final ten minutes of the paper; the sweep is for decisions, not for shading.
- Use only the pen permitted by the centre's instructions; carry the prescribed ID in original plus photocopy.
- Reach the centre well before the reporting time on the admit card; late entry rules are strict and unappealable.

CHAPTER 23

After the Exam: Result to Allotment

The exam ends, and a second, shorter project begins: converting a score into a seat. Most aspirants lose seats here not to merit but to missed deadlines and misunderstood rules.

- 1 Provisional answer keys and your recorded responses are displayed on the NTA site; challenge the questions you can defend within the given window (a fee applies, refunded if your challenge is upheld).
- 2 The result arrives as a scorecard with marks and an All India Rank. Category ranks matter as much as the overall rank.
- 3 If you are AIQ-eligible, register on the MCC portal (mcc.nic.in), pay the counselling fee and security deposit, and fill choices in order of genuine preference — the order is the whole game.
- 4 Register on your state counselling portal in parallel, with your domicile documents ready; for most candidates this is where the realistic seat lives.
- 5 Allotment letters, document verification, reporting to the college within the window — a missed reporting date is a lost seat, full stop.

The free-exit and deposit rules from Chapter 8 apply: you may exit freely after Round 1, but leaving an allotted seat after Round 2 forfeits the deposit, and rules tighten further in Mop-Up. Decide your college hierarchy in advance, with your family and the fee ceilings from Chapter 8 — counselling season does not leave time for fresh financial deliberation.

Counselling for AYUSH, BDS and nursing courses runs on parallel committees and portals with their own schedules; if those courses are in your consideration set, follow their official notices separately.

CHAPTER 24

For Parents: The Support Playbook

This page is for the person often paying for the season and never given an instruction manual. The support a NEET aspirant needs is specific, cheap, and mostly about what not to do.

- The calendar is public. The dates that matter to you: registration opens around February 2027 (the 2026 window ran 8 Feb to 8 Mar), the exam is expected on a Sunday in early May, and counselling runs July to September. Ask once a month: 'any official update?' — and trust only neet.nta.nic.in.
- The money conversation deserves one evening, early. Government-college MBBS fees are modest; private and deemed colleges run into lakhs per year. Set the ceiling before counselling, so a rank in May does not become a family crisis in July.
- Scam radar: anyone selling leaked papers, guaranteed seats or paid answer keys is committing a crime. In 2026, a real leak cancelled a national exam and buyers were the biggest losers. There are no shortcuts — only the official portal.
- Coaching is optional, not required. NCERT, previous papers and this handbook's calendar are the core; coaching adds structure. Judge spend against that honestly.
- Ask about the process, not the marks. 'What did the error log say this week?' builds a candidate; 'how much did you score?' builds an anxious one. The mock score is a moving average — treat it as data, and expect bad weeks in December and February.
- Feed the routine, not the pressure: a fixed study spot, phone-free blocks, dinner at a reliable hour, and sleep defended like tuition money.

THE ONE-SENTENCE VERSION

Your job this season is to keep the student's life steady and the family's expectations honest — the syllabus is the student's job, and 20 lakh of them manage it every year.

CHAPTER 25

Twenty Questions, Answered Straight

Straight answers to the questions aspirants and parents actually ask, in the order they usually ask them.

How many hours a day do I need?

Class 12 students: 6 - 8 focused hours of self-study. Droppers: 8 - 10. Hours are the wrong metric anyway — a week with the error log used and the weekly review kept is a good week at any hour count.

Is NCERT enough for NEET?

For Biology, close to entirely, with Exemplar for practice. For Chemistry, NCERT covers Inorganic and most theory; Physical and Organic need practice volumes beyond it. For Physics, NCERT gives the concepts and numericals practice must come from a standard objective series.

Can I prepare without coaching?

Yes — the syllabus is public NCERT, PYQs are published, and mock series are available independently. Coaching provides structure and pace; self-study with this handbook's calendar, weekly chapter tests and an error log provides the same discipline.

When does registration for NEET 2027 open?

Not yet notified. The 2026 window ran 8 February to 8 March 2026; a similar February 2027 window is expected. Set a reminder for the first week of February and watch neet.nta.nic.in only.

Will NEET 2027 be online?

Unknown. 2026 was pen-and-paper; reports after the 2026 leak suggested computer-based testing was being considered, but nothing was notified as of September 2026. Prepare content-first; practise a few online mocks for safety.

How many attempts do I get?

There is no attempt cap. The binding constraints are age (17 by 31 December of the admission year) and the Class 12 PCB percentage (50 / 40 / 45 by category).

What score do I need for a government MBBS seat?

It moves every year with the paper and the state. In 2026, 670+ competed for top colleges nationally; 620 - 670 was competitive in most states; reserved categories and state quotas shift these bands materially. Aim at a mock streak above your target, not at 'the cutoff'.

Biology or Physics — where should an average student invest?

Biology first, always: it is half the paper and the cheapest marks in it. But do not abandon Physics — it is the rank-shifter precisely because half the field does.

What is the 1 - 7 - 30 rule?

A revision cadence: engage a chapter on day 1, revise and re-solve it within 7 days, and test it again within 30 days. It is the cheapest memory insurance known.

Is a drop year worth it?

Only with a diagnosis. If your score came from accuracy and pacing errors or a fixable content gap, a structured drop year has strong expected value. If it came from an unwillingness to study daily, a repeat year amplifies that, not the score.

Which language should I take the exam in?

The one you think and study in. In 2026, 18 of 22.8 lakh candidates chose English and 3.45 lakh chose Hindi; translation quality is equal, comprehension is not.

What happens if a question is wrong on the paper?

Per NTA's published rules: if no option is correct or the question is dropped, every candidate who appeared gets +4 for it — attempted or not. Multi-correct questions are handled the same generous way.

Do I need to register separately for state counselling?

Yes. AIQ (MCC) and your state quota are separate registrations, fees, documents and timelines. Most serious candidates do both.

How early should I start mocks?

Chapter tests from October; one full 180-minute mock a week from January; two to three a week in April. Analysed at 3:1 — three hours of analysis per hour of testing.

What if boards and NEET preparation clash in February?

They are the same syllabus. Switch the format, not the content: written board practice daily, 30 - 40 NEET MCQs to stay sharp, one weekly mock. Resume full NEET mode the day boards end.

Can I use a calculator in the exam?

No. None is permitted. Which is why mental arithmetic and clean algebra need daily practice from September, not April.

Are there seats outside MBBS worth planning for?

Yes — BDS, BAMS, BHMS, BUMS, BSMS, BVSc and AH, and B.Sc. Nursing (including MNS via NEET). Decide your hierarchy before counselling, not during it.

How do I know my category certificate will be accepted?

It must be in the prescribed format, from the competent authority, current for the admission year (OBC - NCL and EWS certificates have validity windows). Verify against the bulletin's annexures in advance.

What is the biggest scam risk this season?

Paid 'leaked papers' and 'answer-key groups' on Telegram and WhatsApp. In 2026 a real leak cancelled a national exam; every buyer of such material was a loser. Official is official; everything else is a trap.

What single habit most improves a NEET score?

The error log. Every wrong, guessed or slow question, bucketed and revisited weekly. It converts every mistake you will ever make into a question you will never lose again.

CHAPTER 26

The Master Checklist

The whole season as tick-boxes. Print this page mentally; it is the handbook reduced to its verbs.

SEPTEMBER - OCTOBER 2026

- [] Weekly rotation across all three subjects begins; error log opens today
- [] Diagnostics done: one chapter test per subject to map the starting line
- [] Books finalised: NCERT + Exemplar + PYQs + one practice layer; nothing more bought
- [] Daily numericals (Physics) and daily NCERT recall (Biology) habits running

NOVEMBER - DECEMBER 2026

- [] First pass of the full syllabus completed by 31 December
- [] Weekly chapter tests and the Sunday 30-minute review held every week
- [] Exceptions notebook (Biology + Inorganic) one-third filled and revised weekly
- [] Category certificate (if claiming one) verified as valid for the admission year

JANUARY - FEBRUARY 2027

- [] Full-syllabus learning closed; timed subject-wise tests begin
- [] One full 180-minute mock per week at 2 PM, analysed at 3:1
- [] First week of February: registration window checked on neet.nta.nic.in
- [] Form submitted by week one of the window, not the last day; correction window used if needed

MARCH - APRIL 2027

- [] Board written practice daily; 30 - 40 MCQs never dropped
- [] April: two to three full mocks a week; error-log raids on top ten weak chapters
- [] Exam-day order of sections frozen; admit card downloaded and verified
- [] Travel and stay for the allotted city arranged in advance

EXAM WEEK AND AFTER

- [] Sleep protected; nothing new learned; formulas and diagrams revised lightly
- [] One mock or sectional at the real 2 PM slot early in the week
- [] Answer key and recorded responses checked; challenges filed within the window
- [] MCC and state portals both registered on; choice list decided with the family fee ceiling

Eight months is a long time. It is exactly long enough.

CHAPTER 27

Sources and Official Links

Every exam fact in this handbook traces to one of these official sources, all current as of September 2026. Study advice and preparation strategies are the editorial layer, clearly separated throughout the book.

- NTA NEET (UG) 2026 Information Bulletin and public notices — neet.nta.nic.in / nta.ac.in (exam pattern, marking scheme, eligibility, fees, languages, syllabus reference).
- NTA result statistics for NEET (UG) 2026, published July 2026 (registrations, appearance, qualification, category and score-band data, qualifying percentiles).
- NTA press releases on the conduct and cancellation of the 3 May 2026 examination and the 21 June 2026 re-examination.
- NMC seat matrix for undergraduate MBBS courses, 2026-27 — nmc.org.in (1,36,939 seats, 823 colleges, 9,911 new seats).
- Medical Counselling Committee (MCC / DGHS, MoHFW) UG counselling information bulletin and notices — mcc.nic.in (AIQ scope, rounds, deposits, reservation policy).
- Five-year previous-year question analyses published by coaching platforms (Careers360, Physics Wallah, Class24, Oswaal) — used only for chapter weightage estimates, and labelled as such wherever cited.

THE FINAL WORD

Rules change. Dates change. The one page that is always current is neet.nta.nic.in, and the one document that always governs is the Information Bulletin for your exam year. Verify anything that matters, on the day it matters, against the official source.
