DIGITALAIKART ORIGINAL

# AI-PROOF YOUR JOB

## The Job-Hugging Playbook for Indian Professionals

100+ copy-paste AI prompts, the 5-pillar Indispensability Formula, a role-risk scorecard, a 90-day plan and every verified 2026 number you need to stay valuable when AI is reshaping work.

**INDIA EDITION | 2026**

A Digitalaikart publication · digitalkartai.shop

# About this playbook

This is a practical, no-fluff playbook for one specific problem: how to stay valuable, visible and employable in your current job while AI reshapes Indian workplaces. It is written for salaried professionals, mid-career employees and team leads who want to act, not just read.

Everything in here is built to be used on day one. The frameworks are decision tools. The prompts are copy-paste ready. The templates are fill-in. The numbers are current as of October 2026 and every figure is attributed to a named source in Chapter 1 and the Appendix.

## Edition

First Edition - October 2026. Compiled and published by Digitalaikart. Prices, tool names and policy figures change quickly; check the official source before you rely on a number for a financial or legal decision.

## A note on honesty

This playbook will not promise you that a set of prompts makes you fireproof. Nobody can promise that. What it will do is show you, using the evidence that exists, which work is genuinely exposed, which capabilities Indian employers are paying a premium for right now, and the exact weekly habits that make a professional expensive to replace. You still have to do the work.

## Not professional advice

This is educational content, not legal, financial or medical advice. For decisions about your employment contract, severance, taxes or investments, consult a qualified professional.

# What is inside

1 **The 2026 Reality Check**
The numbers on AI, hiring and job security in India - verified and sourced.

2 **What 'Job Hugging' Really Means**
The trend everyone is talking about, and the trap hiding inside it.

3 **Your Role-Risk Scorecard**
A 12-task self-audit that shows exactly which parts of your job are exposed.

4 **The Indispensability Formula**
The five pillars that make a professional expensive to replace.

5 **Pillar 1 - Become the AI Multiplier**
Role-by-role AI workflows that let one person do the work of two.

6 **Pillar 2 - Make Your Work Visible**
The brag document, the weekly wins log and manager communication that lands.

7 **Pillar 3 - Build the Hybrid Skill Stack**
What to learn in India 2026, with free routes and rupee prices.

8 **Pillar 4 - Own a Business Outcome**
How to move from task-taker to outcome-owner in 90 days.

9 **Pillar 5 - Build Your Safety Net**
Market signal, network and the financial buffer that buys you options.

10 **The 90-Day Indispensability Plan**
Your week-by-week 30 / 60 / 90 day execution plan.

11 **The Prompt Library - 104 Prompts**
Copy-paste prompts by job family, from daily work to career positioning.

12 **Templates & Scripts**
Fill-in templates and word-for-word scripts, ready to use.

13 **If the Worst Happens**
The 48-hour response plan for a layoff, PIP or sudden restructuring.

A **Appendix**
India AI tool price sheet (Oct 2026) and the free upskilling directory.

**How to use this playbook**

Do not read this cover to cover and close it. Read Chapters 1-4 in one sitting (about 25 minutes), fill in the Role-Risk Scorecard, then commit to the 90-day plan. Keep Chapter 11 open in a second window and use one prompt a day.

# Chapter 1 - The 2026 Reality Check

Before any advice, the facts. AI is changing Indian jobs - but not in the simple way the headlines suggest. Some work is genuinely shrinking; other work is growing fast and paying a premium. If you know which side of that line your job sits on, you can act. If you guess, you cannot.

## The anxiety is real and measurable

- The share of Indian employees practising ‘job hugging’ - staying put out of caution rather than choice - rose from **45% in 2025 to 57% in 2026**, and about **71%** say they would prefer to continue in their current job.
- Roughly **70%** of employees say they fear AI will impact their jobs. (Survey reported by Hyderabad Mail, April 2026.)
- Gallup's 2025 State of the Global Workplace report found **44% of Indian employees** believe it is not a favourable time to quit or switch jobs.

## But the headline numbers are not a bloodbath

- Nomura's Asia study (reported August 2026) counted **83,100 AI-related hires in India against 31,921 AI-linked layoffs** - about **2.6 hires for every job lost**.
- The ICRIER study ‘AI and Jobs: This Time Is No Different’ (with OpenAI, February 2026), which surveyed **650 Indian IT firms**, found divisions reporting higher output with stable or smaller teams outnumbered those losing productivity by **3.5 to 1**.
- Indian IT industry employment still grew by about **1.35 lakh in FY26**, even as the top five IT firms cut their combined headcount by nearly 7,000.

## The catch: the jobs created are not the jobs lost

This is the single most important sentence in the playbook. The work that is shrinking is **routine, rules-based and standardised**. The work that is growing needs judgement, domain knowledge and AI fluency - often in the same person. Nomura's economists describe a ‘two-tier labour market’: demand rising for experienced people who understand both AI and their business, and falling for some entry-level roles.

| What is under pressure | What is in demand |
|---|---|
| Entry-level coding and boilerplate | AI-augmented engineering and review |
| Routine testing and basic maintenance | Cloud, data and cybersecurity specialists |
| Repetitive data processing and reporting | Analysts who frame decisions, not just charts |
| Tier-1 customer support queries | Client-facing problem solvers and consultants |
| Coordination-heavy middle management | Outcome-owning team leads |
| Back-office and manual reconciliation | Automation and process designers |

**The number that should make you act**

> Only 4% of Indian IT firms in the ICRIER study had trained more than half their workforce in AI, while 63% reported rising demand for people with both domain expertise and AI skills. That gap - between what firms need and what the workforce has - is your opportunity. It is also the reason the next two years will separate colleagues who did nothing from colleagues who moved.

Sources: Nomura Asia employment study (via Bloomberg/India Today, Aug 2026); ICRIER ‘AI and Jobs’ (Feb 2026); Gallup State of the Global Workplace 2025; SHRM India; Times of India and Business Standard coverage of Indian IT hiring (Oct 2026); McKinsey Global Institute (30% of Indian job hours automatable by 2030).

# Chapter 2 - What ‘Job Hugging’ Really Means

‘Job hugging’ is the word HR leaders now use for a behaviour you can see in any Indian office: people staying in their jobs not because they love them, but because leaving feels dangerous. HR body SHRM India and commentators have described it as the flip side of ‘quiet quitting’ - instead of mentally checking out, employees grip harder.

### Why it happens

- Fear of a weak external market: fewer openings, more competition per role.
- Fear of AI displacement - about 70% of employees report it.
- Fear of financial instability while living costs rise.

## The trap inside the trend

Here is the part most people miss. Job hugging protects your **paycheck** while quietly eroding your **value**. If you stay put out of fear and do exactly what you did last year, three things happen at once: your skills stop compounding, your market rate stops rising, and you become more replaceable, not less. Fear keeps you in the seat; it does not make the seat safer.

> **The reframe this playbook is built on**
>
> Do not job-hug out of fear. Job-hug on purpose. Stay where you are - and use that stability as a platform to become so useful that cutting you is expensive. That is a strategy. Clinging is not.

## Three kinds of employees in 2026

| Type | Behaviour | Outcome |
|---|---|---|
| The Clinger | Stays, does the same work, hopes to be spared. | First in line when the list is drawn. |
| The Hopper | Leaves in panic for a marginal hike. | Resets seniority; carries the same risk to a new employer. |
| The Multiplier | Stays, absorbs AI, owns an outcome, is visible. | Becomes the person the team cannot run without. |

This playbook is a manual for becoming the Multiplier. The rest of it is the how.

# Chapter 3 - Your Role-Risk Scorecard

Jobs are not automated; tasks are. Your risk is not your job title - it is the share of your week spent on work that a machine can now do at acceptable quality. Score the twelve task types below.

## How to score

For each row, give yourself 0-3 based on how much of your week it takes: **0** = none, **1** = a little, **2** = a lot, **3** = most of my week. Higher totals mean more exposure.

| # | Task type | Score |
|---|---|---|
| A | Writing first drafts of documents, emails, reports, proposals | 0-3 |
| B | Summarising meetings, articles, calls or long documents | 0-3 |
| C | Producing standard reports, dashboards or recurring updates | 0-3 |
| D | Repetitive data entry, reconciliation or copy-paste work | 0-3 |
| E | First-level answering of predictable customer or internal questions | 0-3 |
| F | Boilerplate code, routine testing or basic bug-fixing | 0-3 |
| G | Translating / formatting / reformatting content between systems | 0-3 |
| H | Scheduling, coordinating, chasing status from people | 0-3 |
| I | Research that is really just searching and collating | 0-3 |
| J | Deciding under ambiguity, with incomplete information | 0-3 |
| K | Building trust and influencing specific humans (clients, leaders) | 0-3 |
| L | Owning a measurable business outcome end-to-end | 0-3 |

## Reading your score

- **Rows A-I are your exposure.** Every point here is a point AI can absorb - and the more of your week they take, the more your role can be re-scoped.
- **Rows J-L are your defence.** Judgement, human influence and outcome ownership are exactly what firms reported paying a premium for in 2026. If these are near zero, that is the gap to close.

> **The rule of the scorecard**
>
> You are not trying to score zero on A-I. You are trying to (1) cut the hours they take by delegating them to AI, and (2) convert the hours you free up into J, K and L. Exposure is fine. Exposure with no defence is not.

Copy this scorecard into a notes app and re-score yourself every 90 days. The direction of the number matters more than the number.

# Chapter 4 - The Indispensability Formula

Indispensability is not about being the hardest worker or the longest-serving. It is a sum of five things, and you can build all five deliberately. Chapters 5 to 9 take them one at a time.

**1. The AI Multiplier**

You use AI to produce more and better work than your peers, in less time. One person, two outputs.

**2. Visible Contribution**

The right people can see, in numbers, what you did and what changed because of it.

**3. The Hybrid Skill Stack**

You pair deep domain knowledge with current AI, data or automation skills - the exact combination 63% of Indian firms said they now demand.

**4. Outcome Ownership**

You are known as the person who owns a result, not the person who does tasks.

**5. A Live Safety Net**

You keep a market signal, a warm network and a financial buffer - so you negotiate from strength, not fear.

## Why this order

Pillar 1 buys you time. Pillar 2 makes that time count. Pillar 3 makes you scarce. Pillar 4 makes you strategic. Pillar 5 makes you calm. Skip any one and the others leak value - the quiet expert nobody notices, or the visible talker with no depth.

# Chapter 5 - Pillar 1: Become the AI Multiplier

The fastest way to become expensive to replace is to be the person on the team who reliably does the work of two, using AI as the second pair of hands. Not by working longer - by removing the low-value hours from your week.

### The Multiplier Method (four steps)

- **Audit one week.** List every task that repeats weekly. Most people find 6-10.
- **Sort into three buckets.** Automate (AI does it), Accelerate (AI drafts, you finish), Own (human judgement, keep it).
- **Build a personal prompt library.** One saved prompt per repeated task. This is the compounding asset - see Chapter 11.
- **Reinvest the saved hours.** Put at least half the hours you free up into Pillars 3 and 4. Otherwise you just get given more admin.

## Role-by-role: where AI gives the biggest lift

| Your role | Hand to AI first | Then own this |
|---|---|---|
| Software / IT | Boilerplate, tests, docs, code review checklists | Architecture, edge cases, security judgement |
| Data / analytics | SQL drafts, chart prep, recurring report text | Framing the question, validating, recommending |
| Sales / BD | Prospect research, first drafts, follow-up sequences | Discovery calls, negotiation, relationship |
| Marketing / content | Draft copy, briefs, variations, scheduling copy | Strategy, positioning, brand judgement |
| HR / people | Job descriptions, screening summaries, policy drafts | Interviews, culture calls, hard conversations |
| Finance / accounts | Reconciliations, variance commentary, summaries | Controls, judgement, stakeholder advice |
| Support / ops | First-response drafts, FAQ, ticket summaries | Escalations, root-cause, process redesign |
| Managers / leads | Status digests, meeting notes, first-draft comms | Decisions, coaching, prioritisation |

> **The visibility rule for Pillar 1**
>
> Do not quietly save time. When you use AI to finish a two-day job in a day, say so - to your manager, in the language of outcomes. ‘I used AI to cut the report cycle from two days to four hours; here is what I did with the extra time.’ Silent efficiency gets absorbed. Visible efficiency gets rewarded.

# Chapter 6 - Pillar 2: Make Your Work Visible

The most common reason capable people get cut is not performance. It is that no one senior could say, in one sentence, what they delivered. Fix that with three small habits that take minutes a week.

## Habit 1 - The Weekly Wins Log

Every Friday, write three lines: what I did, what changed because of it, and the number. Ten minutes. By the end of a year you have an evidence file for your appraisal, your raise conversation and, if it comes to it, your next job. A template is in Chapter 12.

## Habit 2 - The Brag Document

A single running document (in your own notes, not the company drive) with four sections: Impact, Collaboration, Learning, Recognition. Log receipts - emails, messages, numbers. This is not bragging; it is a memory aid for a system that forgets your work every quarter.

## Habit 3 - Manager communication that lands

- Lead with the outcome, not the activity. ‘We recovered 4 hours a week per rep’ beats ‘I worked on the automation project.’
- Bring one number per update. Numbers survive reorganisation; adjectives do not.
- Send a short monthly digest even if nobody asked. Three bullets. It takes five minutes and puts your name in front of your manager with results attached.

> **The three-line status update**
>
> Every week, send: (1) Shipped - what is done; (2) Moving - what is in progress and the expected date; (3) Blocked - what needs a decision from you. This one format makes you look organised and makes your absence - or departure - obviously expensive.

Rule of thumb: if your manager cannot name your top contribution this quarter without checking notes, your work is invisible. Fix it this week.

# Chapter 7 - Pillar 3: Build the Hybrid Skill Stack

The evidence is unambiguous about what Indian employers now pay a premium for: not pure AI skills, and not pure domain skills, but the combination. The ICRIER study found **63% of firms reporting higher demand for candidates with both domain expertise and AI or data skills**. That combination is the scarce thing.

## What the market is paying for in 2026

- AI fluency **plus** cloud, data, cybersecurity, automation or digital engineering.
- Generative-AI role hiring grew **178% year-on-year**; AIOps and MLOps demand has **tripled since 2023** (Quess Corp).
- AI, GenAI and ML roles carry skill premiums of **up to 40%**, and GCC salaries are projected to rise **10.4% in 2026**.
- Soft-skill pairing: problem-solving, domain judgement and client-facing communication layered on top of the technical base.

### Your three-layer stack

| Layer | What it means | Your move this quarter |
|---|---|---|
| Base (keep) | Your domain expertise - the thing you already know | Go one level deeper in the area clients actually pay for |
| Edge (add) | One current AI, data or automation capability | Pick one tool and reach working proficiency, not awareness |
| Surface (show) | Proof you can point to | One artefact: a project, a workflow, a certificate |

## Free routes to build the edge (India, 2026)

- **FutureSkills Prime** (nasscom + MeitY): AI/ML, cloud, cybersecurity and RPA courses with nasscom certifications, and a Government of India incentive of up to ■**12,000** on eligible programmes (assessment fee ■600 + GST).
- **YUVA AI for All**: a free, four-hour foundational AI course in 11 Indian languages, with an official Government of India certificate, available through FutureSkills Prime, iGOT Karmayogi and DIKSHA.
- **Skill India Digital Hub**: 120+ AI-related courses, including 11 focused on Generative AI.
- **PMKVY 4.0** and **SOAR**: short AI, RPA, data-analytics and drone modules aligned to the National Skills Qualification Framework.
- **570 Data and AI Labs** across NIELIT centres, ITIs and polytechnics in tier-2 and tier-3 cities for hands-on, low-cost training.

> **Pick one, finish one**
>
> The failure mode is collecting course tabs. Choose a single capability that overlaps with what your employer already struggles with, finish it in 60 days, and produce one visible artefact. Depth beats a long list of half-finished courses.

A full directory with links-style descriptions is in the Appendix.

# Chapter 8 - Pillar 4: Own a Business Outcome

Task-takers are interchangeable; outcome-owners are not. The shift from one to the other is less about working harder and more about the language you use and the responsibility you claim.

## The four levels of ownership

| Level | How you describe your job | Risk |
|---|---|---|
| 1. Task | 'I process the reports.' | Highest - fully delegable to AI. |
| 2. Process | 'I own the reporting process and its quality.' | High - automatable with oversight. |
| 3. Outcome | 'I own the number: cost, revenue, quality, speed.' | Low - tied to results leadership cares about. |
| 4. Strategy | 'I decide where we invest effort and why.' | Lowest - hard to replace quickly. |

### How to climb one level this quarter

- **Name a number.** Find one metric your team already reports on and ask to own it. Cost per ticket, cycle time, conversion rate, error rate, collections, uptime.
- **Write the one-page brief.** Problem, current number, target, your plan, what you need. Send it to your manager. This single act moves you from doer to owner.
- **Report the trend, not the activity.** Every month, show the number moving. This is how owners are recognised.
- **Make the handover cost visible.** Document your process well - counter-intuitively, a well-documented owner is safer than a mysterious one, because leaders see the value you manage, not the tasks you guard.

> **The sentence that changes how you are seen**
>
> 'I would like to own the [metric]. Here is the current number, the target I think is realistic, and my plan for the next 90 days.' Say this once, in writing, and you stop being a resource and start being an owner.

# Chapter 9 - Pillar 5: Build Your Safety Net

Everything above makes you stronger in your current job. This chapter makes you strong in any job - which is what turns fear into leverage. A professional with options negotiates and performs differently from one who is trapped.

## Three nets, built quietly

- **Market signal.** Once a quarter, check what your role pays and what skills are asked for. Spend 30 minutes on a job portal; note three recurring requirements you do not yet meet. That is your learning list, not a reason to panic.
- **Warm network.** Five people outside your current team who would take your call: two ex-colleagues, two industry peers, one recruiter. Keep them warm with one useful message a quarter - no ask attached.
- **Financial buffer.** An emergency fund that covers a realistic runway of monthly expenses. The Indian rule of thumb for salaried professionals is 6 months of essential expenses; 3 is the floor, 12 the comfort zone. This is the net that lets you say no to a bad situation.

## The 30-minute quarterly market check

- Search your job title + city. Note the salary bands being advertised.
- Read five job descriptions. List every skill that appears in three or more.
- Compare against your stack. Write down one gap to close next quarter.
- Update your CV and one profile line. Do it while you are employed - it is cheaper to be ready than to be caught.

> **Why this is not disloyalty**
>
> A professional who keeps a live safety net is calmer, negotiates better and stays longer for the right reasons. Employers who value you benefit from that stability. The net is not an exit plan; it is insurance.

# Chapter 10 - The 90-Day Indispensability Plan

Thirty minutes of planning now, then execution. Do not start all five pillars at once - that is how plans die. The order below is deliberate.

## Days 1-30 - Audit and multiply

- Week 1: Score your Role-Risk Scorecard (Chapter 3). Start the Weekly Wins Log.
- Week 2: Audit one week of tasks. Bucket them: Automate, Accelerate, Own.
- Week 3: Build your first 10 saved prompts from Chapter 11 for your most repeated tasks.
- Week 4: Cut at least 3 hours a week from low-value work using those prompts. Tell your manager what changed, with a number.

## Days 31-60 - Become visible and start your stack

- Open your Brag Document. Backfill the last quarter from your sent folder and calendar.
- Start the three-line weekly status update. Send it every Friday without being asked.
- Enrol in exactly one course from the Appendix. Block two hours a week for it.
- Write your one-page outcome brief and ask to own one metric (Chapter 8).

## Days 61-90 - Own, prove and secure

- Report the metric you now own - show the trend moving, even slightly.
- Finish your course and produce one visible artefact (a workflow, a dashboard, a write-up).
- Do the 30-minute quarterly market check. Refresh your CV and one profile line.
- Name your five warm network contacts and send one useful, no-ask message to each.
- Re-score your Role-Risk Scorecard. Compare to Day 1. Adjust the next quarter.

> **Track one number for 90 days**
>
> Pick a single weekly metric that proves you are becoming more valuable: hours saved per week, one owned metric trending up, prompts in your library, or a course-progress percentage. One number, tracked honestly, beats a page of intentions.

# Chapter 11 - The Prompt Library

104 copy-paste prompts, grouped by job family. Replace anything in [square brackets] with your specifics. The prompts are written to be safe at work: they ask AI to draft, structure and check - the decision and the accountability stay with you.

> **Three rules before you paste**
>
> 1) Never paste confidential client data, personal data or your company's internal documents into a public AI tool - use your employer's approved tool, or anonymise. 2) Treat every output as a first draft you must verify. 3) You sign your name to the work, so you own the errors.

*The full library follows, organised into twelve sections.*

# A. Daily productivity & AI habits

### A1. The weekly task audit

```
You are a productivity analyst. Here is my list of recurring weekly tasks: [paste list]. For each task, classify it as AUTOMATE (AI can do it end-to-end), ACCELERATE (AI drafts, I finish) or OWN (needs human judgement). Give a one-line reason and suggest the fastest way to cut time on each. Then list my top 3 time-savers in order of hours saved.
```

### A2. Turn a rough note into a clean update

```
Rewrite the following messy notes as a crisp 5-bullet work update for my manager. Lead with outcomes, include any number present, keep it under 120 words, neutral professional tone. Notes: [paste notes].
```

### A3. The 15-minute meeting digest

```
Turn this meeting transcript/notes into: (1) three-line summary, (2) decisions made, (3) action items in a table with owner and deadline, (4) open questions. Do not invent owners or dates - write 'unassigned' or 'TBD' if not stated. Notes: [paste].
```

### A4. Explain this like I am new

```
Explain [concept / document / code] to me as if I am new to the area but experienced professionally. Use a short definition, one analogy, one concrete example relevant to [my industry], and the two things people most often get wrong about it. Source: [paste].
```

### A5. The decision memo draft

```
Draft a one-page decision memo. Decision needed: [x]. Options: [A, B, C]. For each option give pros, cons, cost/effort, and risk. End with a recommendation and the single biggest uncertainty. Keep it to one page, plain English.
```

### A6. Pre-mortem the plan

```
Here is my plan for [project]: [paste]. Assume it failed six months from now. List the five most likely reasons, ranked by probability, and one early-warning signal for each. Be specific, not generic.
```

### A7. Draft then challenge

```
Do two passes on this task. Pass 1: produce the best version of [deliverable]. Pass 2: switch to a sceptical reviewer and list the five weakest points in your own draft, with a fix for each. Deliverable brief: [paste].
```

### A8. The 'what did I forget' check

```
I am about to [send / submit / present] [describe]. List everything a careful professional would check before this goes out - completeness, tone, numbers, attachments, names, dates, permissions. Give it as a pre-flight checklist.
```

# B. Software, IT & engineering

### B1. Understand an unfamiliar codebase

```
Act as a senior engineer onboarding to this codebase. From the files below, produce: (1) a one-paragraph architecture summary, (2) the 5 files I must read first and why, (3) the likely data flow, (4) three risky areas to be careful with. Code: [paste].
```

### B2. Write the tests I skipped

```
Write [unit / integration] tests for the function below using [framework]. Cover normal cases, boundary values and two likely failure modes. Add a one-line comment on what each test protects. Code: [paste].
```

### B3. Explain this error properly

```
I got this error: [paste]. Explain (1) what it literally means, (2) the three most likely root causes ranked, (3) the exact next diagnostic step for each, (4) the fix once confirmed. Do not guess the stack - ask me for it if missing.
```

### B4. Turn requirements into a plan

```
Here is a feature request: [paste]. Produce: user stories, edge cases, a task breakdown with rough effort (S/M/L), dependencies, and a list of questions I must clarify before starting. Flag anything ambiguous.
```

### B5. Code review checklist

```
Review this change as a strict but constructive senior reviewer. Output: blocking issues, non-blocking suggestions, security and performance concerns, and one thing done well. Be specific with line references. Code diff: [paste].
```

### B6. Write the docs nobody wants to write

```
Write developer documentation for this module: what it does, how to run it locally, configuration options, common errors and fixes, and a short 'how to extend it' section. Audience: a new joiner. Code: [paste].
```

### B7. Optimise with evidence

```
Here is a slow [query / function / process]: [paste]. Suggest three optimisation options, each with expected gain, effort and risk. Recommend one. Do not suggest micro-optimisations before I confirm the bottleneck.
```

### B8. Draft the design doc

```
Draft a one-page design doc for [feature]. Sections: problem, goals, non-goals, proposed approach, alternatives considered, risks, rollout and rollback. Keep it decision-oriented, not academic. Context: [paste].
```

### B9. SQL / query assistant

```
Write a [database] query to [goal] from these tables: [paste schema]. Then give: an explanation line by line, two ways to make it faster, and one way it could return wrong results. Add a comment block at the top summarising intent.
```

### B10. Learn a new tool fast

```
Create a 5-day, 30-minutes-a-day learning plan to reach working proficiency in [tool / framework] for my role as [role]. Day by day: what to read, what to build, and how to know I have actually learned it. Assume I know [existing skills].
```

# C. Data & analytics

### C1. Frame the question before the chart

```
I have been asked: [business question]. Before any analysis, write: the decision this is meant to inform, the metric that answers it, the data needed, the likely confounders, and how I will know the answer is trustworthy. Keep it to half a page.
```

### C2. Explain a number to a non-analyst

```
Explain this result to a busy non-technical manager: [paste result]. Use: the headline in one sentence, why it matters, what changed, one caveat, and the recommended action. No jargon. Max 120 words.
```

### C3. Sanity-check my analysis

```
Here is my analysis and conclusion: [paste]. Act as a sceptical reviewer. List the three assumptions that, if wrong, break the conclusion; one alternative explanation; and one quick check I can run today to stress-test it.
```

### C4. Automate a recurring report

```
Here is the recurring report I produce weekly: [describe / paste]. Give me a step-by-step plan to automate the manual parts using [tools I have], including what stays manual and why. Estimate time saved per week.
```

### C5. Draft the insight, not the summary

```
Turn this data into an insight memo: the 'so what', the recommended action, the expected impact, and the confidence level with reasoning. Avoid restating the numbers. Data: [paste].
```

### C6. Define a metric properly

```
Help me define [metric] precisely so it cannot be gamed. Give: exact formula, inclusions and exclusions, data source, refresh cadence, and one way someone could game it and how to prevent that.
```

### C7. Variance commentary

```
Write the variance commentary for this month: actual vs budget by line. Explain the three largest variances with a plausible driver, flag any that need investigation, and keep the tone factual. Data: [paste].
```

### C8. Teach me the method

```
Teach me [statistical / analytical method] well enough to use it and to know when it is wrong to use it. Include: intuition, a worked mini-example, assumptions, and the classic misuse.
```

# D. Sales & business development

### D1. Research a prospect in 5 minutes

```
Using only the information I paste below about [company], produce: their likely priorities this quarter, three pain points my offer could address, one personalised opening line, and two smart discovery questions. Do not invent facts - label anything uncertain. Info: [paste].
```

### D2. First cold email that gets replies

```
Write a 90-word cold email to [role] at [company] about [offer]. Structure: relevant hook, one clear value line with a proof point, one low-friction ask. No hype words, no 'I hope this finds you well'. Give me two variants: direct and warm.
```

### D3. The 5-email follow-up sequence

```
Write a five-email follow-up sequence for a prospect who went quiet after [stage]. Each email under 80 words, each adding a new angle (insight, case example, timing, question, polite close). Include send-day gaps.
```

### D4. Discovery call question bank

```
Give me 15 discovery questions for a sales call with [role] about [product], organised into: current situation, impact, decision process, and urgency. Avoid leading questions. Add one follow-up probe for each.
```

### D5. Objection response drafts

```
For the objection '[objection]', write: what the buyer is really saying, a one-line empathy acknowledgement, a reframe, an evidence line, and a question that moves the call forward. Keep it to 100 words. Give two styles: consultative and direct.
```

### D6. Proposal in the buyer's language

```
Turn these rough points into a proposal outline for [client]: their problem, the outcome they want, our approach, deliverables, timeline, price options and next steps. Mirror the client's own words where possible. Notes: [paste].
```

### D7. Pipeline review prep

```
Here is my pipeline: [paste]. Prepare my review: deals most at risk and why, three deals I should focus on this week with the next action, and two questions my manager will ask that I should have answers to.
```

### D8. Negotiation prep

```
I am negotiating [deal / price] with [counterparty]. Map: my walk-away, their likely constraints, three concessions I can trade (not give), and the exact words for holding the price. Then give the worst case and how I respond.
```

### D9. Win/loss reflection

```
Here is what happened in [deal]: [paste]. Extract three repeatable lessons for the next deal and one process change worth making. Be blunt and specific.
```

# E. Marketing & content

### E1. Content brief from one idea

```
Turn this idea into a content brief: [idea]. Give target reader, the single promise, an outline with H2s, three proof points, the CTA, and a working headline plus two alternates. Keep it specific to an Indian audience.
```

### E2. Draft copy that sounds human

```
Write [format] copy for [offer] aimed at [audience]. Voice: [tone]. Rules: short sentences, no buzzwords, one idea per line, lead with the benefit. Length: [x]. Then flag any line that sounds like generic AI writing and rewrite it.
```

### E3. 10 angles from one asset

```
Here are 10 different angles I could take on [topic] for [audience]. For each: a hook line, the core point, and the best format (post, email, short video). Rank them by likely engagement and say why.
```

### E4. Localise for India

```
Rewrite this for an Indian audience: [paste]. Keep the meaning, adapt idioms, examples, currency and cultural references. Note anything that would not land in India and why.
```

### E5. Ad variations for testing

```
Write five ad variations for [product] for [platform]. Vary the angle: pain, outcome, proof, curiosity, offer. Each: headline under 40 characters, body under 90 words, one CTA. Note which hypothesis each variation tests.
```

### E6. SEO page outline

```
Create an SEO outline for the keyword '[keyword]'. Include search intent, a title tag under 60 characters, meta description, H2/H3 structure, the questions to answer, and internal-link ideas. Avoid keyword stuffing.
```

### E7. Repurpose long to short

```
Turn this long piece into: 5 short social posts, 3 email subject lines, 2 video hooks and 1 newsletter intro. Keep each platform's native style. Source: [paste].
```

### E8. Landing page critique

```
Critique this landing page copy: [paste]. Assess: clarity of the promise in 5 seconds, proof, objection handling, CTA strength. Give a prioritised fix list and rewrite the three weakest lines.
```

### E9. Campaign plan one-pager

```
Draft a one-page campaign plan for [goal] over [duration] with budget [amount]. Include audience, message, channels, content needed, timeline and the single metric that defines success.
```

# F. HR & people

### F1. Job description that attracts well

```
Write a job description for [role] at [company]. Include: mission of the role, 5 outcomes (not tasks), must-have vs nice-to-have skills, and what success looks like in 90 days. Plain language, no cliches. Details: [paste].
```

### F2. Screening summary with evidence

```
Summarise this candidate against the role requirements: [paste CV and requirements]. For each requirement, quote the exact evidence from the CV or write 'no evidence found'. Do not infer or assume. Flag gaps for the interview.
```

### F3. Structured interview kit

```
Build a structured interview kit for [role]: 8 questions mapped to the competencies [list], with a scoring rubric (1-5) and what a strong vs weak answer looks like. Add two work-sample tasks.
```

### F4. Onboarding plan

```
Create a 30/60/90-day onboarding plan for a new [role]. Include what they should learn, who to meet, what to deliver by each milestone, and the check-in points.
```

### F5. Hard-conversation script

```
Help me prepare for a difficult conversation with a team member about [issue]. Give: the opening line, the facts I should state neutrally, two questions to understand their view, the outcome I want, and how to close. Keep it respectful and specific.
```

### F6. Policy draft

```
Draft a clear, fair [policy name] for a [size]-person Indian company. Include purpose, scope, what is allowed, process, and review cadence. Plain English, no legalese. Note any point that needs legal review.
```

### F7. Engagement survey analysis

```
Here is our engagement survey data: [paste]. Identify the three themes with the biggest gap between importance and score, one likely root cause each, and one low-cost action per theme. Avoid generic advice.
```

### F8. Performance review, balanced

```
Turn these notes about [person] into a balanced performance review: strengths with examples, areas to develop with examples, and two specific goals for next quarter. Fair, evidence-based, no vague praise. Notes: [paste].
```

## G. Finance, accounts & admin

### G1. Reconciliation helper

```
Here are two sets of figures to reconcile: [paste]. Identify the likely matches, the unmatched items, and three plausible reasons for each mismatch. Do not assume; list what you need to confirm each one.
```

### G2. Budget vs actual commentary

```
Write a clear commentary for this budget-vs-actual sheet: [paste]. Cover the three biggest variances, a plausible driver for each, whether it needs action, and the one-line takeaway for the finance lead.
```

### G3. Process documentation

```
Document this process as a step-by-step SOP a new joiner could follow: [describe process]. Include inputs, steps, controls, exceptions, and who approves what. Add a checklist at the end.
```

### G4. Vendor comparison

```
Compare these vendor quotes: [paste]. Build a table with price, inclusions, exclusions, payment terms, risk and total cost of ownership. Recommend one and state the two assumptions that could change your answer.
```

### G5. Email for a payment follow-up

```
Write a polite but firm payment follow-up email for an overdue invoice of [amount] to [client], [x] days overdue. Third reminder. Firm, professional, no apology for asking, with a clear next step if unpaid.
```

### G6. Cash-flow stress test

```
Here is my monthly cash-flow: [paste]. Model three scenarios - normal, 20% revenue drop, 40% drop - and show how many months I stay positive in each. Flag the earliest warning sign.
```

### G7. Meeting minutes to action log

```
Turn these minutes into an action log: task, owner, deadline, status. Then list the decisions made and any item that was discussed but left undecided. Minutes: [paste].
```

### G8. Policy/regulation summarised

```
Summarise this [circular / notice / policy]: [paste]. Give: who it applies to, what changes, the effective date, what action is required, and the deadline. Write 'not stated' if a detail is missing - do not guess.
```

# H. Customer support & operations

### H1. First-response drafts

```
Write three customer replies for this query: [paste]. Styles: empathetic, concise and formal. Each under 120 words, acknowledge the issue, state what happens next, give a realistic timeframe. No promises I cannot keep.
```

### H2. Turn an angry message into a calm reply

```
Here is an angry customer message: [paste]. Give: what they are really upset about, a de-escalating opening line, the facts to state, the resolution I can offer, and a closing line. Keep it human, not corporate.
```

### H3. Build an FAQ from tickets

```
From these support tickets: [paste], identify the ten most common questions, write a clear answer for each, and flag any that reveal a product bug or process gap worth fixing.
```

### H4. Root-cause template

```
Help me run a root-cause analysis for this recurring issue: [describe]. Use the 5-whys, separate symptom from cause, and produce one corrective action and one preventive action. Do not stop at 'human error'.
```

### H5. Escalation summary

```
Write an escalation summary for this case: [paste]. Include timeline, impact, what has been tried, current status, what is needed from the escalation owner, and the customer's expectation. Factual, no blame.
```

### H6. Process improvement idea

```
Here is the current process: [describe]. Identify the three biggest sources of delay or rework, the likely cause of each, and one specific fix. Estimate the time saved per week if implemented.
```

### H7. Knowledge-base article

```
Write a knowledge-base article for [issue]. Structure: symptom, cause, step-by-step fix with screenshots placeholders, when to escalate, and related articles. Audience: a first-week support agent.
```

### H8. Quality-check my reply

```
Review my drafted reply below against these rules - accurate, empathetic, clear next step, no over-promise, correct tone for [customer type]. Point out anything weak and rewrite those lines. Draft: [paste].
```

# I. Managers & team leads

### I1. Team status digest

```
Turn these individual updates into a one-page team digest for my manager: overall status, wins, risks, decisions needed, and next week's focus. Flag anything that needs escalation. Updates: [paste].
```

### I2. 1:1 agenda that is not a status update

```
Build a 1:1 agenda for a team member who is [context]. Focus on growth, blockers and motivation, not task updates. Include three questions to ask and one thing I should listen for.
```

### I3. Prioritisation under pressure

```
Here are my team's commitments: [paste]. Help me prioritise: what to protect, what to defer, what to drop, and the message to stakeholders for each. Use impact and urgency, and be decisive.
```

### I4. Write a clear decision memo

```
Draft a decision memo for [decision]. Include context, options, trade-offs, my recommendation, who is affected, and the rollback plan. One page. Written so a busy leader can decide in two minutes.
```

### I5. Delegation plan

```
Help me delegate [work] without dropping quality. For each part: who should own it, what 'good' looks like, the check-in cadence, and what I must not micromanage. Context: [paste].
```

### I6. Feedback that changes behaviour

```
Give me a script to give feedback to [person] about [behaviour]. Structure: the observation (facts, not labels), the impact, the ask, and how I will support. Keep it under 150 words and specific.
```

### I7. Turn strategy into team goals

```
Turn this strategy: [paste] into team goals. For each: the outcome, the metric, the owner, and the first action. Make them measurable and few - no more than five.
```

### I8. Team upskilling plan

```
My team of [size] [roles] needs to be more AI-fluent in 90 days. Build a realistic plan: what each person learns, the weekly time commitment, how we practise on real work, and how we measure progress.
```

### I9. Bad-news communication

```
Help me communicate this difficult news to my team: [situation]. Give: the opening line, what to say and what not to say, how to handle questions I cannot answer, and the follow-up. Honest, calm, respectful.
```

# J. Learning, upskilling & interviews

### J1. Turn a job description into a study plan

```
Here is a job description for a role I want: [paste]. Build a 60-day study plan to close my gaps. Map each requirement to a resource type, a practice task, and how I will prove it. Assume my current skills are: [list].
```

### J2. Explain then test me

```
Teach me [topic] for [role]. Explain the core idea simply, give one worked example, then test me with five questions of increasing difficulty. Wait for my answers before giving feedback.
```

### J3. Turn work into a portfolio piece

```
Help me turn this work I did: [describe] into a portfolio case study. Structure: problem, what I did, tools, result with a number, and what I would do differently. Keep it under 250 words.
```

### J4. Interview prep from my own work

```
Based on my experience: [paste], generate 12 likely interview questions for a [role] role, with a STAR-format outline answer for each using my real examples. Flag any question where my example is weak.
```

### J5. The 'tell me about yourself' answer

```
Write a 90-second 'tell me about yourself' answer for a [role] interview. Include: current role, one concrete achievement with a number, the reason for the move, and one forward-looking line. My background: [paste].
```

### J6. Salary negotiation script

```
I have an offer of [amount] for [role] in [city]. Market range is [range]. Give me a script to negotiate: the opening ask, the justification, three responses to pushback, and my walk-away line. Professional and calm.
```

### J7. Mock interview

```
Run a mock interview for [role]. Ask me one question at a time, wait for my answer, then give: a score out of 5, what worked, what to cut, and a stronger version of my answer. Start now.
```

### J8. Certificate vs project decision

```
I am considering [course/certificate] vs building a [project]. Compare them for someone targeting [role] in India in 2026: signal to employers, cost, time, and risk. Recommend one and say why.
```

### J9. Weekly learning log

```
Design a simple weekly learning log for me. Fields: what I learned, what I practised, what I can now do that I could not last week, and next week's focus. Keep it to five fields and one screen.
```

# K. Visibility, reporting & self-appraisal

### K1. Weekly wins log entry

```
Turn today's work into a weekly wins log entry: what I did, the outcome it produced, the number (or 'not measured'), and the skill it demonstrated. Raw notes: [paste].
```

### K2. Self-appraisal that gets noticed

```
Write my self-appraisal for [period] using these notes: [paste]. Structure: outcomes delivered with numbers, problems solved, collaboration, skills built, and goals for next period. Confident, evidence-based, no filler.
```

### K3. The one-page outcome brief

```
I want to own the metric [metric]. Draft a one-page brief: current number, target, why it matters, my 90-day plan, resources needed, and how I will report progress. Address it to my manager.
```

### K4. Three-line Friday update

```
Turn my week into a three-line Friday update for my manager: Shipped / Moving (with dates) / Blocked (needs a decision). Raw notes: [paste].
```

### K5. Raise or promotion case

```
Build the case for a [raise / promotion] to [role]. Include: the value I have delivered with numbers, the market rate for my role in [city], the responsibilities I already carry beyond my title, and a clear ask. Notes: [paste].
```

### K6. Communicate a win without bragging

```
Rewrite this achievement so it is clear and confident without sounding boastful: [paste]. Use outcome-first language, credit the team where relevant, and keep it to two sentences.
```

### K7. Ask for more responsibility

```
Draft a message asking my manager for more ownership in [area]. Include: what I have delivered, what I want to take on, why I am ready, and what I need from them. Concise and confident.
```

### K8. Prepare for a skip-level chat

```
I have a 20-minute chat with [leader]. Help me prepare: the one outcome I want from the conversation, two questions that show I think about the business, one thing to be ready to explain about my work, and how to close.
```

### K9. Recognition for a colleague

```
Write a short recognition note for [colleague] about [contribution] for [public / private] channel. Specific, sincere, credit where due, and a line on the impact. Under 60 words.
```

# L. Career positioning & safety net

### L1. Positioning statement

```
Write my professional positioning statement for [role] in [industry]. Format: I help [who] achieve [what] using [skills]. Give three versions: LinkedIn headline, one-line intro, and a 30-second spoken version. Background: [paste].
```

### L2. Rewrite my CV for AI-era roles

```
Rewrite my CV bullets for [target role]. Each bullet: strong verb, what I did, the tool or method, and a measurable result. Remove duties that AI now does. My CV: [paste].
```

### L3. LinkedIn profile refresh

```
Rewrite my LinkedIn headline, about section and three experience bullets to position me for [target role]. Plain language, specific, keyword-relevant, no buzzwords. Current profile: [paste].
```

### L4. Market-rate check

```
I am a [role] with [years] years in [city]. Help me check my market rate: list the factors that move pay for my role in India in 2026, the salary bands typically advertised, and three specific ways I could move into a higher band. Do not state a single number as fact - show a range and why.
```

### L5. Warm network message

```
Write a short, no-ask message to reconnect with [contact type] whom I last spoke to [time] ago. Genuine, specific to them, offers something useful, no favour requested. Under 70 words.
```

### L6. Emergency fund plan

```
Help me build an emergency-fund plan. My essential monthly expenses are [amount]. Show the target for 3, 6 and 12 months, a realistic monthly saving needed for each over [x] months, and the first three things to cut. Keep it practical.
```

### L7. Skill-gap scan

```
Here are five job descriptions for [target role]: [paste]. List every skill appearing in three or more of them, mark which I already have (from my profile: [paste]), and rank the gaps by how much they affect my hiring odds.
```

### L8. Side-income sanity check

```
I am considering earning on the side through [idea]. Assess: time needed per week, realistic monthly income in India, start-up cost, the biggest risk, and the one thing I must validate first. Be honest about the effort.
```

### L9. If I were laid off tomorrow

```
Assume I am laid off tomorrow. Give me a calm 30-day plan: week 1 admin and emotions, week 2 positioning, weeks 3-4 outreach and interviews, and the daily schedule. Include the one number I should watch to stay on track.
```

# Chapter 12 - Templates & Scripts

Copy these into your notes app today. They are deliberately short - the point is that you actually use them, not that they impress.

### Template 1 - Weekly Wins Log (Friday, 10 minutes)

| What I did | What changed (outcome) | Number | Skill shown |
|---|---|---|---|
| | | | |
| | | | |
| | | | |

### Template 2 - Brag Document (keep it in your own notes)

- **Impact:** projects and outcomes with numbers.
- **Collaboration:** times you helped others or unblocked a team.
- **Learning:** skills built, courses finished, tools mastered.
- **Recognition:** praise, awards, messages - with dates and names.

### Template 3 - The three-line weekly update (send every Friday)

> **Copy-paste format**
>
> **Shipped:** [what is done, with one number].
> **Moving:** [what is in progress] - on track for [date].
> **Blocked:** [what needs a decision or help] - need [specific ask] by [date].

### Template 4 - 1:1 agenda you can send in advance

- One win from last week.
- One blocker I need help with.
- One thing I want to own more of next quarter.
- One question about priorities.

### Template 5 - Script: ask to own a metric

> **Say it like this (in writing, once)**
>
> ‘I would like to take ownership of [metric] from next month. Current number is [x]. I think [y] is a realistic 90-day target. Here is my plan: [3 bullets]. I will send you a short trend update every month. Does that work?’

### Template 6 - Script: ask for an upskilling course

> **The ask**
>
> ‘Our team keeps hitting [problem]. I want to build [skill] to fix it - the course is [name] and takes [x] hours over [y] weeks, [cost or free]. If I finish it, I will deliver [specific artefact] by [date]. Can I block [time] a week for it?’

### Template 7 - The 90-day ownership tracker

| Metric I own | Baseline | 30-day | 60-day | 90-day |
|---|---|---|---|---|
| | | | | |
| | | | | |

### Template 8 - The quarterly market check (30 minutes)

- Salary bands advertised for my title + city.
- Five skills that appear in three or more job descriptions.
- My one gap to close next quarter.
- Update: CV, one profile line, one warm network message.

# Chapter 13 - If the Worst Happens

This chapter is insurance. If you are laid off, put on a performance plan, or your role is suddenly restructured, the first 48 hours matter - not for panic, for order. Here is the sequence.

## The 48-hour response plan

- **Hour 0-2: Get it in writing.** Ask for the terms in writing: last working day, notice period, severance, leave encashment, and any non-compete or non-solicit clause. Do not sign anything on the spot.
- **Hour 2-24: Protect the details.** Save your personal files (never company data), collect references, note your accomplishments while you still have access. Confirm your final settlement and any pending variable pay.
- **Day 1-2: Steady the money.** Calculate your runway: emergency fund divided by essential monthly expenses. That number tells you how much time you have and removes the panic.
- **Day 2-7: Reactivate the net.** Message your five warm contacts. Update your CV and one profile line. Do not mass-apply yet - target 10 roles you are genuinely right for.
- **Week 2+: Work the plan.** A daily schedule with job search, upskilling and rest. Treat it like a job with hours, or burnout will beat you before the market does.

## If you are put on a performance plan

- Ask for the objectives in writing, with specific, measurable targets and dates.
- Keep your own dated record of everything you deliver against them.
- Ask what support is available - training, mentoring, a reduced scope.
- Keep performing and keep your options warm in parallel. A PIP is a signal to prepare, not always an ending.

> **The mindset that protects you**
>
> A layoff is a business event, not a verdict on your worth. The people who recover fastest are the ones who had a net, kept receipts of their work and stayed calm enough to negotiate. That is exactly what Chapters 6 and 9 were for.

For severance, notice-period and non-compete questions, get advice specific to your contract - this playbook is general information, not legal advice.

# Appendix

## A1 - India AI tool price sheet (checked October 2026)

Prices are monthly and include GST where the vendor lists rupee prices in India. Claude, Perplexity and GitHub Copilot bill many Indian users in US dollars, so add your card's foreign-transaction markup (typically 2-3.5%). Prices change - always confirm at checkout.

| Tool | Entry paid plan | Standard plan | Notes |
|---|---|---|---|
| ChatGPT | Go ■399 | Plus ■1,999 | Pro tiers from ■10,699; UPI on Go/Plus |
| Google Gemini | AI Plus ■399 | AI Pro ■1,950 | Ultra from ■6,500; Jio offer: 18 months AI Pro free (offer period ends 29 Oct 2026) |
| Claude | - | Pro ■1,999 (App Store) / $20 web | Bills in USD on the web; no UPI |
| Perplexity | - | Pro ■1,999 / $20 | Cited research |
| Microsoft Copilot | M365 Personal ■689 | Premium ■1,999 | Copilot inside Office + storage |
| Grok | - | SuperGrok ■2,900 | App Store India price |
| Canva | Pro ■500 | ■4,000/yr | Design and social content |
| Cursor | Start ■649 | Pro $20 | AI code editor |
| GitHub Copilot | Pro $10 | - | In-editor coding assistant |
| Gamma | Plus ■500 | ■400/mo billed yearly | AI presentations |
| QuillBot | Premium ■334/mo | - | Billed annually |

Tip: check whether your employer already provides an approved AI tool. Using the company tool is both safer for data and free to you.

## A2 - Free and low-cost upskilling directory (India, 2026)

| Programme | What you get | Who runs it |
|---|---|---|
| FutureSkills Prime | AI/ML, cloud, cybersecurity, RPA courses + nasscom certifications; GoI incentive up to ■12,000 on eligible programmes (assessment ■600 + GST) | nasscom + MeitY |
| YUVA AI for All | Free 4-hour foundational AI course, 11 Indian languages, official GoI certificate | IndiaAI Mission / MSDE |
| Skill India Digital Hub | 120+ AI-related courses, 11 on Generative AI | MSDE |
| SOAR (Skilling for AI Readiness) | Foundational to sector-specific AI skills, NSQF-aligned | MSDE / NCVET |
| PMKVY 4.0 | Short modules in AI/ML, RPA, drone, Industrial IoT, data analytics | MSDE |
| Data & AI Labs | 570 hands-on labs across NIELIT, ITIs and polytechnics | MeitY / MSDE |

## A3 - The 10 rules of this playbook

- Score your role, do not guess it.
- Cut low-value hours with AI before you cut your hours at the desk.
- Reinvest at least half the time you save into skills and ownership.
- If it is not visible, it did not happen.
- One number per update beats ten adjectives.
- Pair depth in your domain with one current AI capability.
- Finish one course before starting the next.
- Own a metric, not a to-do list.
- Keep five warm contacts and six months of runway.
- Re-score yourself every 90 days.
