

DIGITALAIKART ORIGINAL

AI TEACHER TOOLKIT 2026

100+ Ready Prompts & a Classroom Playbook
for Indian Teachers

Built for CBSE, ICSE and State Boards · Classes 1–12
Lesson plans · Question papers · Worksheets · Grading
Parent messages · Regional languages · The new CT & AI curriculum

FAISAL FAYAZ LONE

First Edition · October 2026

Verified against CBSE Circular Acad-15/2026, NEP 2020, NCF-SE 2023
and official 2026 AI tool pricing for India.

digitalkartai.shop

How to Use This Toolkit

This is not a book about artificial intelligence. It is a box of tools you can open on a Monday morning and use before the first bell. Every one of the prompts in this toolkit is written for an Indian classroom — a CBSE, ICSE or State Board teacher, a real chapter from NCERT or your state textbook, and the class sizes, languages and paperwork you actually deal with.

Three ways to use it

1. **Straight copy-paste. Open the chapter you need (Lesson Plans, Question Papers, Parent Messages),** pick a prompt, replace the parts in square brackets with your class, subject and chapter, and paste it into ChatGPT or Gemini.
2. **Build your own prompt shelf. Once you see the pattern (Chapter 3), you can write your own prompts in** two minutes instead of hunting for a template.
3. **Follow the 30-day plan (Chapter 13). One small habit a day takes you from “I tried AI once” to “AI** saves me a full evening every week.”

What is inside

- 110 numbered, copy-paste prompts across 12 teaching jobs — planning, assessment, worksheets, grading, parent messages, administration and the new CT & AI curriculum.
- The 5-part teacher prompt formula (Role · Context · Task · Format · Guardrails) that stops generic answers.
- A verified 2026 tool and pricing sheet for India — including the free options that are genuinely good enough.
- Safety, privacy and academic-integrity rules written for schools, not for offices.

A promise about accuracy

Every factual claim in Chapters 1, 2 and 12 — board circulars, curriculum hours, tool names and rupee prices — was checked against the official source in September–October 2026. Prices and offers in AI change fast: the Appendix B cheat sheet tells you exactly where to re-check before you rely on a number.

1. The 2026 Classroom Reality

Two things changed for Indian teachers in 2026, and both are official. First, AI literacy became part of the school curriculum. Second, powerful AI tools became free or near-free in India. Together they mean the question is no longer “should I use AI?” but “which 20 minutes of my week should I give back to it?”

The curriculum has already moved

On 1 April 2026, the Union Education Minister launched CBSE's Curriculum Framework for Computational Thinking (CT) and Artificial Intelligence (AI) for Classes III–VIII, to run from the 2026–27 academic session. (Source: CBSE Circular No. Acad-15/2026 dated 01.04.2026; PIB release, 1 April 2026.)

- **Classes 3–5 (Preparatory Stage): Computational Thinking only — 50 hours a year, woven into** Mathematics and “The World Around Us”, taught by the existing subject teachers using CBSE

worksheets and puzzles. No AI subject yet.

- **Classes 6–8 (Middle Stage): 100 hours a year — Advanced CT (about 40 hours), Introductory AI literacy (about 20 hours) and two interdisciplinary projects (about 40 hours), delivered jointly by subject teachers and the Computer teacher.**
- **The framework is deliberately platform-agnostic and mandates CT + AI + Ethics + unplugged (no-computer) learning, with the stated goal of creating AI-literate learners by 2030.**
- **For Class IX, all other AI courses run up to 2025–26 are discontinued from 2026–27; Class X continues on the 2025–26 scheme, and NCERT is providing CT & AI modules for Classes IX–XII in 2026–27 to be transacted as internal-assessment modules.**

Why this matters to every teacher, not just computer teachers

CBSE's annual teacher-training theme for 2026–27 is “Computational Thinking and Understanding AI.” The curriculum explicitly asks Mathematics, Science and Social Science teachers to carry the CT component in their own periods. You do not need to become an AI expert — but you do need to be comfortable running the activities. Chapter 11 gives you ten ready prompts for exactly that.

The tools are free enough in 2026

The single most useful fact for an Indian teacher: you almost certainly do not need to pay anything. Here is the verified October 2026 picture.

Tool / plan	India price (Oct 2026)	Good for
ChatGPT Free	■0	Basic lesson plans, worksheets, quick drafts
ChatGPT Go	■399 / month	Heavier daily use, GPT-5 class models
ChatGPT Plus	■1,999 / month	Deep Research, agent mode, long documents
Google Gemini Free	■0	Everyday help, 22 Indian languages, image reading
Google AI Plus	■399 / month (■199 intro, 6 months)	More Gemini + NotebookLM, 400 GB storage, family sharing
Google AI Pro	■1,950 / month	Full Gemini, NotebookLM power features, 2 TB storage
Google AI Ultra	■6,500 / month (5× limits)	Highest limits — not needed by most teachers
NotebookLM	Free tier	Grounding AI in your own textbook PDFs
Canva for Education	Free for verified teachers	Worksheets, slides, posters, certificates
Bhashini	Free	Translation and voice in 22 Indian languages

The Jio offer worth knowing

Jio and Google are offering Google AI Pro (normally ₹1,950/month) free for 18 months to Jio users aged 18+ on an active unlimited 5G plan of ₹349 or above, activated inside the MyJio app. If you qualify, that is a professional-grade AI subscription at no cost. Two earlier offers — Airtel's free Perplexity Pro year and OpenAI's free ChatGPT Go year — ended in January 2026, so do not rely on them.

A note on the free tools: Gemini handles Hindi, Tamil, Telugu, Kannada, Bengali and other Indian languages noticeably better than most Western tools, so if you teach in a regional medium, start there. Bhashini is a Government of India language platform and is free.

2. Set Up in 30 Minutes

You do not need a course, a certificate or a paid plan to begin. You need one free account, one clear policy for student data, and a rough idea of which tool to open for which job.

Which tool for which job

Your job	Open this	Why
Lesson plans, worksheets, question papers	ChatGPT or Gemini (free)	Fast drafts, easy to edit, good tables
Teaching in a regional language	Gemini (free)	Strongest Indian-language output of the free tools
Working from your own textbook/chapter PDF	NotebookLM	Answers only from the sources you upload
Posters, worksheets, slides, certificates	Canva for Education	Free for verified teachers; ready templates
Translation and voice in Indian languages	Bhashini	Free government platform, 22 languages
Teaching AI concepts to students (no computers)	Google Teachable Machine + unplugged games	Hands-on, no coding, works on one shared screen

Five data rules to follow from day one

- 1. Never paste a student's full name, roll number, address, phone number or photograph into a public AI tool.** Use "Student A", "Roll 12" or initials.
- 2. Never upload internal school documents — fee records, medical notes, staff confidential files — to a free consumer tool.**
- 3. Treat everything the AI writes as a draft. You are the subject expert; the AI is a fast, tireless assistant that sometimes invents facts.**
- 4. Check your school's own AI policy first. If your school has none, follow the safest rule: no identifiable student data leaves your device.**
- 5. Tell students clearly when AI was used to prepare a resource, and hold them to the same honesty in their own work.**

One habit that saves the most time

Keep a single document called “My Prompts”. Every time a prompt works well, save it with one line saying which class and subject you used it for. In a month you will have a personal prompt library worth more than any paid course.

3. The 5-Part Teacher Prompt

“Make a lesson plan on photosynthesis” gives you a generic answer built for a Western classroom. “You are an experienced CBSE Class 7 Science teacher in India...” gives you something you can teach tomorrow. The difference is five parts, in this order.

Role · Context · Task · Format · Guardrails

- **Role** — tell the AI who it is. “You are an experienced CBSE Class 8 Mathematics teacher in India.”
- **Context** — give the real details. Board, class, subject, chapter name, medium of instruction, number of students, time available.
- **Task** — one clear job. “Create a 40-minute lesson plan.” Not five jobs at once.
- **Format** — say how you want it. “Use a table with columns Time, Teacher activity, Student activity, Materials.”
- **Guardrails** — the rules that protect you. “Use only NCERT content. Do not invent facts. Add a note where I should verify. Keep language suitable for Class 8.”

Before and after

Weak prompt

Give me a lesson plan on the water cycle.

Strong prompt (all five parts)

You are an experienced CBSE Class 6 Science teacher in India. Context: NCERT Class 6 Science, chapter on Water, 45 students, 40-minute period, English medium, no lab available. Task: Create one 40-minute lesson plan. Format: a table with columns — Time, Learning outcome, Teacher activity, Student activity, Materials. Guardrails: use only NCERT-level content, use everyday Indian examples, include one low-cost hands-on activity with materials available in any classroom, and add a final row telling me what to verify before teaching.

Two extra moves that upgrade almost any prompt

- Ask for the answer in a table. Tables are far easier to scan, edit and copy into your lesson-plan register.
- Add the line: “Where you are not certain, write [VERIFY] instead of guessing.” This single line turns a confident-but-wrong answer into an honest draft you can trust.

4. Lesson Planning

Twenty prompts for the single biggest weekly job. Replace the square brackets with your class, subject and chapter.

1. The 40-minute lesson plan

You are an experienced [BOARD] Class [X] [SUBJECT] teacher in India. Context: [CHAPTER NAME] from the [NCERT/state] textbook, [N] students, one 40-minute period, [medium] medium. Task: create a complete 40-minute lesson plan. Format: table with columns Time, Learning outcome, Teacher activity, Student activity, Materials. Guardrails: use only textbook-level content, add [VERIFY] wherever uncertain.

2. The 5E lesson plan

Create a 5E lesson plan (Engage, Explore, Explain, Elaborate, Evaluate) for [CHAPTER] for [BOARD] Class [X] [SUBJECT]. For each E, give the teacher's script in 3-4 sentences and the student task. Use Indian, everyday examples.

3. Chapter concept note

Summarise the chapter [CHAPTER] from [BOARD] Class [X] [SUBJECT] into a one-page concept note: key definitions, 5 key terms with simple meanings, 3 formulas or rules, and one common student misconception. Keep it to Class [X] reading level.

4. Learning outcomes in NCF-SE style

Write 5 learning outcomes for [CHAPTER] for Class [X] [SUBJECT] in the competency format used by NCF-SE 2023: "Students will be able to...". Make them observable and assessable, not vague.

5. Prior-knowledge check

Create 5 quick questions to find out what my Class [X] students already know about [TOPIC] before I teach [CHAPTER]. Keep it to 5 minutes, no marks.

6. Low-cost classroom activity

Design one hands-on activity to teach [CONCEPT] to Class [X] using only materials available in an average Indian classroom (paper, chalk, water, stones, string). Explain the steps in 6 lines and what students should observe.

7. Real-life Indian examples

Give me 8 real-life Indian examples or analogies that explain [CONCEPT] to a Class [X] student — from cricket, cooking, farming, trains, festivals or daily life.

8. 20-minute homework

Set homework on [CHAPTER] for Class [X] that takes about 20 minutes. Give 6 questions of increasing difficulty and a one-line instruction for parents.

9. Blackboard plan

Write the exact blackboard plan for a 40-minute lesson on [TOPIC] for Class [X]: what to write, in what order, and where to draw a diagram. Present it as a sequence.

10. Story hook

Write a 2-minute opening story or real-life situation to hook Class [X] students before I start [TOPIC]. End with a question that makes them curious.

11. Two-period unit plan

Create a unit plan for [UNIT] for [BOARD] Class [X] [SUBJECT] across [N] periods. For each period give the topic, learning outcome and assessment. Format as a table.

12. Remedial plan

My Class [X] students are weak in [TOPIC]. Create a 3-session remedial plan (20 minutes each) that rebuilds the basics with simple steps, worked examples and short practice.

13. Enrichment plan

Design an enrichment task on [TOPIC] for the fast learners in Class [X] — one challenging project or investigation that takes a week and stretches their thinking.

14. Practical / lab plan

Create a practical plan for [EXPERIMENT] for Class [X] Science: aim, materials, step-by-step method, expected observation, and the safety precautions to announce before students touch anything.

15. Map or diagram teaching plan

Plan a 40-minute lesson to teach [MAP/DIAGRAM] in Class [X] [SUBJECT]: how to introduce it, what to label first, a memory trick, and 5 questions to check understanding.

16. Language lesson plan (poem/prose)

Create a 40-minute lesson plan to teach the [POEM/CHAPTER] [NAME] in Class [X] [LANGUAGE]: theme, difficult words with meanings, comprehension questions, and one creative response task.

17. Maths word problems, Indian context

Write 8 word problems on [TOPIC] for Class [X] Maths using Indian contexts (rupees, kilometres, cricket scores, market prices). Include a worked solution for each.

18. Revision lesson

Plan a 40-minute revision lesson for [UNIT] before a test for Class [X]: a 10-minute recap, 20 minutes of mixed practice, and a 10-minute doubt round. Give the exact questions to use.

19. Group work plan

Design a group activity on [TOPIC] for a Class [X] of 45 students. Explain how to form groups, what each group does, the time limits, and how to keep noise manageable.

20. Exit ticket

Write a 5-minute exit-ticket for the end of a lesson on [TOPIC] for Class [X]: 3 questions that tell me whether the class understood, plus how to use the answers tomorrow.

5. Question Papers & Assessment

Question-paper making is where AI saves the most hours — and where you must check the most. Always review the output against your board's actual blueprint and marking scheme.

21. Paper blueprint with marks distribution

Create a question-paper blueprint for [BOARD] Class [X] [SUBJECT], unit [UNIT], total [N] marks. Give a table: section, question type, number of questions, marks each, total marks. Follow the current [BOARD] pattern for 2026-27.

22. 5 MCQ + 3 short + 2 HOTS with answer key

You are an experienced [SUBJECT] teacher and assessment designer. From the chapter content below, create: 5 MCQs (4 options, mark the correct one), 3 short-answer questions, and 2 HOTS (application/case-based) questions. Then give a complete answer key. Content: [PASTE CHAPTER TEXT].

23. Assertion-reason questions

Create 6 assertion-reason questions on [TOPIC] for Class [X], in the standard format (Assertion A, Reason R, options a-d). Provide the correct answers with one-line reasoning.

24. Case-study / competency-based question

Create one case-study based question on [TOPIC] for Class [X] as per the CBSE competency-based format: a short real-life passage (80-100 words) followed by 4 sub-questions of increasing difficulty, with answers.

25. Numerical problems with solutions

Write 8 numerical problems on [TOPIC] for Class [X] [SUBJECT], from easy to hard, with full step-by-step solutions and the final answer in SI units.

26. Diagram-based questions

Create 5 diagram-based questions on [TOPIC] for Class [X]. Describe each diagram clearly in text so I can draw it on the board, and give the answer for each.

27. Fill-ups and match-the-column

Create a 10-mark exercise on [TOPIC] for Class [X]: 5 fill-in-the-blanks, one match-the-column with 5 pairs, and 3 true/false statements. Give the answer key.

28. True/false with justification

Write 6 true/false statements on [TOPIC] for Class [X] where students must also justify their answer in one line. Give the key with the reasoning.

29. Two versions of the same test

Create two versions (Set A and Set B) of a [N]-mark test on [UNIT] for Class [X]. Both must cover the same concepts at the same difficulty, but with different questions and numbers, so copying is pointless. Provide both answer keys.

30. HOTS question bank

Create 10 higher-order-thinking questions on [UNIT] for Class [X] that require application, analysis or reasoning rather than recall. Tag each with the skill it tests and give a model answer.

31. Full periodic test paper

Generate a complete [N]-mark periodic test paper for [BOARD] Class [X] [SUBJECT] covering [UNITS], following the 2026-27 [BOARD] pattern (sections, marks, internal choice). Then give the marking scheme.

32. Answer key with marking scheme

Create a detailed marking scheme for the question paper below, for Class [X]: for each question give the expected points and how to award partial marks. Paper: [PASTE PAPER].

33. Rubric for a subjective answer

Create a 4-level rubric (0-1-2-3) to mark a long answer on [TOPIC] for Class [X], describing exactly what earns each level. Keep it to one page.

34. Oral / viva question bank

Create 20 oral/viva questions on [TOPIC] for Class [X], from easy to probing, with the key idea expected in each answer. Suitable for a 5-minute viva per student.

35. Project assessment with rubric

Design a project on [TOPIC] for Class [X]: the brief, the timeline, what students submit, and a rubric with 4 criteria scored out of 5 each. Total 20 marks.

36. Portfolio / activity assessment sheet

Create an observation sheet to assess Class [X] students during activities on [TOPIC]: 5 criteria, a 3-point scale, and space to note one specific comment per student.

37. Diagnostic test to find gaps

Create a 15-question diagnostic test on the prerequisites for [CHAPTER] for Class [X]. Include an answer key and a simple way to read the results — which wrong answers point to which gap.

38. Question paper in a regional language

Create a [N]-mark question paper on [TOPIC] for Class [X] in [LANGUAGE]. Keep the technical terms in English in brackets after the regional word. Then give the answer key in English.

39. Bloom's-tagged question bank

Create 20 questions on [UNIT] for Class [X] and tag each with the Bloom's level it tests (Remember, Understand, Apply, Analyse, Evaluate, Create). Aim for a spread across all six levels.

40. Previous-year-style practice paper

Create a practice paper for [BOARD] Class [X] [SUBJECT] in the style and difficulty of past board papers on [UNIT], with an answer key. Mark any question whose style you are unsure about with [VERIFY].

6. Worksheets & Differentiation

One chapter, three levels, one worksheet set. These prompts let you serve the whole class without working three times as hard.

41. Differentiated worksheet, 3 levels

Create a worksheet on [TOPIC] for Class [X] in three levels: Level 1 (basic, for students who struggle), Level 2 (standard), Level 3 (challenge, for fast learners). Same concept, different difficulty. Include an answer key for each.

42. Worksheet with answer key

Create a 20-mark worksheet on [TOPIC] for Class [X] with a mix of MCQ, short answer and one application question. Give the answer key at the end.

43. Visual worksheet (text-described)

Create a worksheet on [TOPIC] for Class [X] that needs diagrams. Describe each diagram in words so I can draw it, and add a question for each.

44. Scaffolded worksheet with hints

Create a worksheet on [TOPIC] for Class [X] where each question has a small hint in a box. The hints should guide thinking without giving the answer.

45. Concept-map worksheet

Give me a blank concept map for [UNIT] for Class [X] — the central idea and 8 linked boxes, with the correct links provided separately as an answer key.

46. Worksheet for slow learners

Rewrite the key ideas of [CHAPTER] for Class [X] using very simple sentences and short words, then add 8 easy questions. Keep the reading level two classes lower.

47. Extension worksheet for toppers

Create a challenging extension worksheet on [TOPIC] for the top 5 students of Class [X]: 5 questions that need reasoning, estimation or open-ended thinking, with model answers.

48. Vocabulary worksheet

Create a worksheet with 15 important terms from [CHAPTER] for Class [X]: each term with a simple meaning, then a matching exercise and 5 fill-ups using the terms.

49. Worksheet in simple English

Create a worksheet on [TOPIC] for Class [X] written in very simple English, with short sentences, so students who read slowly can still attempt it. Include an answer key.

50. 10-minute homework worksheet

Create a quick 10-minute practice worksheet on [TOPIC] for Class [X] — 8 short questions, one line each, with answers.

51. Practical worksheet

Create a worksheet to go with the [EXPERIMENT] practical for Class [X]: aim, materials, a table to record observations, 3 analysis questions and one conclusion line for students to complete.

52. Reading comprehension, Indian context

Write a 150-word passage on [TOPIC] set in an Indian context, for Class [X], followed by 5 comprehension questions (2 literal, 2 inferential, 1 opinion) and an answer key.

53. Maths drill sheet

Create a 20-question drill sheet on [TOPIC] for Class [X] Maths, arranged from easy to hard, with all answers. Keep numbers manageable so students can compute without a calculator.

54. Pre-exam revision worksheet

Create a revision worksheet covering the whole of [UNIT] for Class [X]: a 10-line summary, 15 mixed questions and an answer key. Suitable for one evening of revision.

7. Grading, Feedback & Rubrics

AI cannot replace your judgement on a student's answer, but it is excellent at drafting the words of feedback, spotting patterns in mistakes, and building rubrics.

55. Feedback on a short answer

Here is a Class [X] student's answer on [TOPIC]: [PASTE ANSWER]. Give feedback in 3 short parts: what is correct, what is missing, and one concrete next step. Keep it encouraging and suitable for the student to read.

56. Turn a rough answer into a model answer

Here is a weak answer on [TOPIC] for Class [X]: [PASTE]. Rewrite it as a model answer of the length and depth expected in a board exam, then list the 3 differences between the two so I can explain them in class.

57. Common-mistake analysis

Here are 5 wrong answers from my Class [X] test on [TOPIC]: [PASTE]. Identify the common mistake behind each, and suggest one targeted re-teach for each mistake.

58. Personalised feedback comment bank

Create a bank of 15 short feedback comments for Class [X] work on [TOPIC] — 5 praising good work, 5 pointing to a specific weakness, 5 suggesting improvement. Keep each to one sentence.

59. Class-level feedback summary

Here are the scores from a Class [X] test: [PASTE]. Write a short summary I can read to the class: what most students did well, the two weakest areas, and one thing we will fix this week. Do not name any student.

60. Rubric generator

Create a 4-level rubric for the assignment [DESCRIBE ASSIGNMENT] for Class [X], with 4 criteria and clear descriptors for each level. Total marks [N].

61. Consistent grading of a set of answers

Here are 6 student answers on [TOPIC] for Class [X]: [PASTE]. Score each out of [N] using the same standard, explain each score in one line, and tell me if any answer was borderline.

62. Written-work correction checklist

Give me a 6-point checklist I can stick on my desk to correct Class [X] notebooks on [SUBJECT] quickly and consistently — what to mark, what to ignore, and how to write one useful comment.

63. Student self-assessment sheet

Create a simple self-assessment sheet for Class [X] after the [TOPIC] unit: 6 “I can...” statements students tick (yes / not yet), plus two lines for what they want help with.

64. Peer-assessment sheet

Create a peer-assessment sheet for Class [X] students to review each other's work on [TASK]: 4 criteria, a 3-point scale, and one “one thing I liked” and “one thing to improve” box.

8. Parent Communication

Clear, warm, short messages save you dozens of phone calls. Always keep the school's approved tone and never put a child's private details into a public AI tool.

65. Positive note home

Write a short, warm note to the parents of a Class [X] student about good work in [SUBJECT] this week. One paragraph, positive and specific, no marks mentioned. Keep it under 80 words.

66. Concern note (attendance/behaviour)

Write a respectful note to parents about a Class [X] student's [LOW ATTENDANCE / CLASSROOM BEHAVIOUR]. Be factual and kind, ask for a meeting, and avoid blaming language. Under 90 words.

67. PTM talking points — weak student

Prepare talking points for a parent-teacher meeting about a Class [X] student who is struggling in [SUBJECT]. Give 3 strengths to open with, 2 concerns stated gently, and 3 concrete ways the parent can help at home.

68. PTM talking points — bright student

Prepare talking points for a parent-teacher meeting about a Class [X] student who is doing very well in [SUBJECT]. Include 3 specific strengths, one area to stretch, and one suggestion to keep them challenged.

69. Exam-preparation note to parents

Write a note to parents of Class [X] about the upcoming [EXAM]: dates, what to revise, how much to study each day, and 4 simple ways parents can support without pressure. Under 150 words.

70. Holiday homework note

Write a short note to parents of Class [X] about the holiday homework for [SUBJECT]: what it is, how long it should take each day, and a reminder to let children work independently.

71. Circular for an activity or trip

Write a school circular for Class [X] about [ACTIVITY / FIELD TRIP]: purpose, date, timing, what to bring, and consent line. Formal but friendly, under 150 words.

72. Fees / forms reminder (neutral)

Write a neutral reminder to parents of Class [X] about [FORM / FEE DEADLINE]. Do not mention amounts; keep it factual and polite, with the school office contact line.

73. Message in Hindi (transliterated)

Write a short message to parents of Class [X] in Hindi, typed in Roman letters (Hinglish), about [TOPIC / EVENT]. Simple words, under 70 words, respectful tone.

74. Message in Tamil (transliterated)

Write a short message to parents of Class [X] in Tamil, typed in Roman letters (Tanglish), about [TOPIC / EVENT]. Simple words, under 70 words.

75. Message in Marathi (transliterated)

Write a short message to parents of Class [X] in Marathi, typed in Roman letters, about [TOPIC / EVENT]. Simple words, under 70 words.

76. WhatsApp group announcement

Write a 3-line WhatsApp announcement for the Class [X] parents' group about [EVENT]. Short, clear, with date, time and what to bring. No more than 40 words.

9. Regional Language & Inclusion

India teaches in more than twenty languages. Gemini and Bhashini are the strongest free options for regional-medium work; always read the output aloud once before using it.

77. Explain a concept in Hindi

Explain [CONCEPT] to a Class [X] student in simple Hindi (Devanagari). Use everyday examples, keep sentences short, and end with 3 practice questions in Hindi.

78. Translate a worksheet to Tamil

Translate this worksheet into Tamil for Class [X], keeping technical terms in English in brackets after the Tamil word. Worksheet: [PASTE].

79. Bilingual glossary

Create a bilingual glossary of 20 key terms from [CHAPTER] for Class [X] in English and [LANGUAGE]. Format as a two-column table.

80. Simplify text for learning needs

Rewrite this passage for a Class [X] student who has difficulty reading: shorter sentences, common words, one idea per line. Passage: [PASTE].

81. Instructions in the mother tongue

Write the classroom instructions for the [ACTIVITY] in [LANGUAGE] so I can read them out to my Class [X] students, with the English meaning in brackets.

82. Audio-overview script for a chapter

Write a 3-minute spoken script that explains [CHAPTER] to Class [X] students as if for a podcast — friendly, clear, with one question at the end. I will paste it into a tool like NotebookLM to make an audio overview.

83. Multi-grade classroom lesson

Design one 40-minute activity that works for a multi-grade classroom with Class [X] and Class [Y] together on [TOPIC]. Explain how to split attention and what each group does.

84. Inclusive mixed-ability activity

Design a group activity on [TOPIC] for a mixed-ability Class [X], where every member has a role suited to their level (recorder, presenter, materials, timekeeper). Explain how to assign roles fairly.

10. Administration & Records

The paperwork nobody trained you for — done in minutes.

85. Lesson-plan register entry

Convert this lesson plan into a single paragraph suitable for a school lesson-plan register entry for Class [X] [SUBJECT]. Format: date, topic, learning outcome, activity, assessment. Plan: [PASTE].

86. Monthly teaching report

Write a one-page monthly teaching report for Class [X] [SUBJECT] for [MONTH]: topics covered, activities done, assessment held, and points for next month. Formal school tone.

87. Syllabus-completion tracker

Create a syllabus-completion tracker for [SUBJECT] Class [X] for the year: a table with unit, planned periods, done periods, and status. Leave the 'done' columns blank for me to fill.

88. Invigilation / exam duty note

Write a short note I can keep for exam duty on [DATE]: reporting time, what to check, seating arrangement steps and how to handle a suspected unfair-means case. Keep it to a one-page checklist.

89. Absence follow-up letter

Write a polite follow-up letter to the parents of a Class [X] student who has been absent for [N] days. Factual, concerned, no accusation, and a request to meet the class teacher.

90. Minutes of a staff meeting

Turn these rough notes from a staff meeting into clean minutes for [DATE]: [PASTE NOTES]. Format: decisions taken, action points, who is responsible, by when.

91. Circular to students

Write a circular to Class [X] students about [TOPIC / EVENT] — short, clear, with date, time, venue and what to bring. One paragraph.

92. Annual report paragraph for a class

Write a 120-word paragraph for the school annual report describing Class [X]'s year in [SUBJECT]: activities, achievements and one highlight. Positive and specific.

93. Progress-report comments (25 students)

Write a bank of 25 short progress-report comments for Class [X] — a mix of praise, steady-progress, needs-attention and improvement comments. Each one sentence, no student names.

94. Revision schedule around the timetable

Build a revision schedule for [SUBJECT] Class [X] before [EXAM], fitting study around a normal school day. Give a day-by-day table for [N] days with topics and time per day.

11. Teaching the New CT & AI Curriculum

From 2026-27, CBSE's CT & AI curriculum runs for Classes III–VIII, with Mathematics, Science and Social Science teachers carrying the Computational Thinking component in their own periods. These prompts help you run it confidently — no coding, no new schedule.

95. Unplugged CT activity (Classes 3-5)

Design an unplugged (no computer) activity to teach sequencing and step-by-step thinking to Class [3-5] students using paper, chalk or physical movement. Give clear steps and what to observe.

96. Pattern-recognition puzzle set (Classes 3-5)

Create 8 pattern-based puzzles for Class [3-5] using numbers, shapes and everyday pictures. Arrange them from easy to hard and give the answers.

97. Algorithm activity (Classes 6-8)

Create a step-by-step 'algorithm' activity for Class [6-8] on [everyday task, e.g. making tea]. Then give one version with a deliberate mistake and ask students to debug it.

98. Decomposition exercise (Classes 6-8)

Give a decomposition exercise for Class [6-8]: take one big problem ([SCHOOL FESTIVAL / A SCHOOL CANTEEN MENU]) and break it into smaller sub-problems. Provide a worked example and a blank template for students.

99. AI-literacy explainer (Classes 6-8)

Write a simple, age-appropriate explanation of what Artificial Intelligence is and how it learns from data, for Class [6-8] students. Use 3 everyday Indian examples and end with 4 discussion questions.

100. AI ethics debate topics

Give 6 age-appropriate debate topics on AI ethics for Class [6-8] — fairness, bias, privacy, jobs and honesty. For each, provide one argument for and one against.

101. Two AI project ideas with rubrics

Suggest 2 interdisciplinary AI/CT project ideas for Class [6-8], each taking about 20 hours. For each, give the aim, steps, what students submit, and a rubric scored out of 10.

102. Teacher observation journal template

Create a Teacher Observation Journal template to track Class [3-5] students' computational-thinking progress: what to observe, a simple 3-point scale, and space for one note per student per month.

103. Worksheet mapped to a Maths chapter

Create a worksheet of CT-flavoured questions mapped to the [MATHS CHAPTER] of Class [X], in the style of CBSE's CT resource books: thinking-based, not recall. Give the answers with reasoning.

104. AI-awareness assembly talk

Write a 3-minute assembly talk for Class [6-8] students introducing AI — what it is, what it can and cannot do, and how to use it honestly. Simple, engaging, no jargon.

12. Safety, Ethics & Academic Integrity

Using AI well is a professional skill; teaching students to use it honestly is now part of the job. Here are the rules, then six prompts that keep you on the right side of them.

The ten rules

1. **The AI drafts; you decide. Never teach a fact you have not checked.**
2. **No identifiable student data in a public AI tool — names, roll numbers, photos, addresses.**
3. **Never upload confidential school records to a free consumer tool.**
4. **Read the AI's output fully before it reaches a student. Every time.**
5. **Add “write [VERIFY] instead of guessing” to prompts about facts, numbers and law.**
6. **Keep a copy of the source you checked, in case a parent or the principal asks.**
7. **Tell students when a resource was AI-assisted. Model the honesty you expect.**
8. **AI must not do a student's thinking for them — it can explain, not replace.**
9. **Check for bias in examples and questions; correct stereotypes before use.**
10. **If something feels wrong, slow down. Speed is never worth an error in a classroom.**

105. Rewrite in the student's own voice (integrity-safe)

I have a student's rough draft on [TOPIC]. Help me show them how to improve it themselves: give 5 guiding questions they should answer, and one example of how to strengthen a weak sentence — without writing the answer for them. Draft: [PASTE].

106. Fact-check a passage

Check this passage for factual errors at Class [X] level and list anything doubtful with the correct version and a source to check. Passage: [PASTE].

107. Age-appropriate explanation policy

Explain [SENSITIVE TOPIC] to Class [X] students in an age-appropriate, neutral and respectful way, suitable for a classroom in India. Flag anything I should get the principal's approval for.

108. Detect AI-written student work

Here is a piece of student work for Class [X]: [PASTE]. List the signs that suggest it may have been copied from an AI tool, and suggest how to have a fair conversation with the student about it.

109. Classroom AI-use rules (student charter)

Draft a one-page AI-use charter for Class [X] students: 6 clear do's and don'ts, written simply, that we can print and stick on the classroom wall.

110. Anonymise student data

Rewrite these class notes so no student can be identified — replace names with letters and remove any personal detail. Notes: [PASTE].

13. The 30-Day Adoption Plan

Do not try to change everything at once. One small step a day, and by the end of the month AI will have quietly given you back a full evening every week.

Days	Focus	What you do
1-3	Get set up	Create one free account (ChatGPT or Gemini). Write the 5-part prompt formula on a sticky note. Try prompt 1 once.
4-7	Lesson planning	Use three lesson-planning prompts (Chapter 4) for real classes. Save the two that worked best.
8-11	Assessment	Generate one MCQ set and one HOTS question with answer keys (Chapter 5). Check every question before use.
12-15	Worksheets	Create one differentiated worksheet (Chapter 6) at three levels for a topic you teach this week.
16-19	Feedback & parents	Draft one feedback comment bank (Chapter 7) and one parent message (Chapter 8).
20-23	Regional & admin	Try one regional-language prompt (Chapter 9) and clear one admin job (Chapter 10).
24-27	The new curriculum	Run one unplugged CT activity (Chapter 11) with your class. Note what worked.
28-30	Make it a habit	Build your personal 'My Prompts' document. Set aside 20 minutes every Friday for AI prep.

The one rule that makes all of this work

Review everything. AI is a fast, tireless assistant that is occasionally confidently wrong. You are the teacher — that is the whole point, and it is the one thing AI cannot replace.

Appendix A — Master Prompt Index

This toolkit contains 110 numbered, copy-paste prompts across twelve teaching jobs. Use the chapter headings to jump to what you need:

- Chapter 4 — Lesson Planning (20 prompts): from a 40-minute plan to an exit ticket.
- Chapter 5 — Question Papers & Assessment (20 prompts): blueprints, MCQ+HOTS sets, rubrics.
- Chapter 6 — Worksheets & Differentiation (14 prompts): three levels, one topic.
- Chapter 7 — Grading, Feedback & Rubrics (10 prompts).
- Chapter 8 — Parent Communication (12 prompts), including three Indian languages.
- Chapter 9 — Regional Language & Inclusion (8 prompts).

- Chapter 10 — Administration & Records (10 prompts).
- Chapter 11 — The New CT & AI Curriculum (10 prompts).
- Chapter 12 — Safety, Ethics & Integrity (6 prompts + the ten rules).

Tip: number the prompts as you save them, and keep a one-line note of the class and subject you used each one for. Your index will become more valuable than the toolkit itself.

Appendix B — Tool Cheat Sheet

Where to re-check before you rely on a number. AI prices and offers move fast — always confirm on the official page.

What to check	Official source
ChatGPT plans and India prices	openai.com/chatgpt/pricing (and the ChatGPT app store listing)
Gemini / Google AI plans and India prices	gemini.google.com (Subscriptions, India)
The Jio free Google AI Pro offer	jio.com/google-gemini-offer (and the MyJio app)
NotebookLM	notebooklm.google.com
Canva for Education (free for teachers)	canva.com/education
Bhashini (Indian-language tools)	bhashini.gov.in
CBSE CT & AI curriculum and circulars	cbseacademic.nic.in
NCERT textbooks	ncert.nic.in

Appendix C — The 10 Verification Rules

Print this page. It is the difference between a teacher who uses AI safely and one who gets burned by it.

- 1. Read the output before a student does. Every single time.**
- 2. For any fact, figure, date or rule, open the official source and confirm it.**
- 3. Add [VERIFY] to prompts about numbers, law and syllabus specifics.**
- 4. Never trust an AI answer about a board's pattern or marking scheme without checking the board's own paper.**
- 5. Keep your own copy of the source you checked.**
- 6. If a question looks wrong, it probably is — rewrite or drop it.**
- 7. Use the AI for the first draft, your expertise for the final one.**
- 8. Do not let AI write feedback that could hurt a child; read every comment as if the parent will see it.**
- 9. Check for bias and stereotypes in examples before you teach them.**
- 10. When in doubt, slow down. An error in a classroom costs more than the time you saved.**

Thank you for teaching

India runs one of the largest school systems in the world, and it runs on teachers. This toolkit exists to give you back time — for your students, your family and yourself. Use it well, review everything, and keep teaching like it matters. It does.
