Who this playbook is for

This is written for the person carrying a number in India in 2026: the SDR sending forty cold emails before lunch, the business-development manager working a Tier-2 city, the account manager who has to justify a renewal, and the founder or freelancer who sells without a sales team at all. If any part of your week is spent researching prospects, writing outreach, running calls, or chasing follow-ups, the prompts here will save you hours.

It assumes you already know how to sell. It does not teach sales theory or promise that AI will close deals for you. What it does is hand you the instructions that turn a general-purpose AI assistant into a useful junior teammate for the repetitive half of the job - so your own judgement and relationship skills go where they matter.

How to use this playbook

This is a working tool, not a book to read once. It contains 60 copy-paste prompts for the moments an Indian sales professional faces every week - from building a target list to handling the final objection before a close.

Here is how to get value from it in the first hour. Skim the four short chapters of Part 1 and Part 2 to understand the method and the safety rules. Then find the prompts that match the work you have on your plate today - a cold email to write, a call to prepare for, an objection to handle. Copy the prompt, replace every [BRACKETED] part with your real details, and run it.

Every prompt follows the same structure: a title, a line on when to use it, the prompt itself, and a practical tip. The prompts are deliberately short and plain. They are starting points you adapt, not scripts to send unedited. The single rule that matters most: verify every fact before it reaches a real prospect.

Use the 30-day plan in Part 5 to build the habit, and keep the quality checklist next to your screen. Sellers who get the most from AI are not the ones with the most prompts - they are the ones who run a few, honestly, every week.

Chapter 1 - What the 2026 numbers say about Indian sales teams

The case for this playbook is not a hunch. It comes from Salesforce's State of Sales report for 2026, which surveyed 4,050 sales professionals worldwide, including 250 in India, between August and September 2025. The India findings are the clearest picture we have of how Indian sellers actually work right now.

Three findings matter for every Indian sales professional reading this. First, AI has already arrived: 90% of Indian sales organisations use some form of AI for prospecting, forecasting, lead scoring, or drafting emails. Second, the sellers who use it do not want to go back: 94% say AI deepens their understanding of customers, and 89% say it makes the job less stressful. Third, and most striking, 91% of Indian sales professionals say AI agents are essential to business success.

The same report points to the real bottleneck. Sellers spend close to a full day a week prospecting and still say they do not have enough time for adequate outreach. 61% of Indian sellers say they lack the bandwidth to do cold outreach properly, and 58% name cold calling as the worst part of the job. The problem is not effort or skill. It is time spent on work that a tool can now do faster.

90%	91%	61%	35%
Use AI	**Agents vital**	**Bandwidth gap**	**Time back**

Indian sales organisations already use AI for prospecting, forecasting or drafting	Indian sellers say AI agents are essential to business success	Indian sellers lack time for adequate cold outreach	Expected cut in prospect research time once agents are in place

Adoption is still early in practice. Just over half of Indian sellers say they have used an AI agent, with a further 43% planning to by 2027. Those who have adopted them expect to cut prospect research time by 35% and email drafting by 38%. That is roughly two hours a week returned to selling.

The honest reading of the data is this. The sellers pulling ahead in India are not the ones with the most tools. They are the ones who use AI for the repetitive layer - research, first drafts, follow-ups, notes - and keep their own judgement for the conversations that close deals. This playbook is about the first half of that sentence, so you have more room for the second.

Chapter 2 - Why prompts, and not just tools

Most sellers who say AI 'does not work for them' are using it the same way they use a search engine: one short, vague question, one disappointing answer. A prompt is not a question. It is a brief. The clearer the brief, the sharper the output, and the less time you spend editing.

There is direct evidence that Indian users value good prompts. In a six-month study of 18,774 student searches, the single highest-converting theme was 'AI prompts', earning 98 clicks per thousand impressions against a site average of 34. People who want AI to work for them search for prompts, not for tools. The tool is the easy part; the instruction is where the value sits.

A good sales prompt does five things: it sets a role, gives real context, states the exact task, sets the constraints (length, tone, format), and shows what a good answer looks like. This playbook calls that the SCOPE formula, and every one of the 60 prompts below is built on it.

Chapter 3 - The AI sales stack in India

You do not need to buy anything to use this playbook. The prompts work in any capable assistant - ChatGPT, Gemini, Claude, Copilot, or your company's internal tool. If you already have one of these, you are ready. Start free, and upgrade only when a limit actually pinches your week.

Where the paid tools earn their money is repetition. If you send hundreds of emails a week, a tool that remembers your product and your customers will beat pasting the same context into a blank chat each time. If you send a dozen, the free tier is fine. Be honest about which seller you are before you spend.

One warning that matters more in India than anywhere else: the tool is only as good as the data you feed it and the facts it returns. AI will happily invent a company's revenue, a prospect's role, or a statistic. Treat every fact it produces as a draft to verify, never as truth to send. The safety rules in Chapter 6 are not optional.

Chapter 4 - The SCOPE formula for a prompt that works

Every prompt in this playbook follows the same five-part shape. Learn it once and you can write your own for any situation.

- S - Situation. Set the role and the scene: who you are, who the prospect is, and what is true. 'You are a B2B sales researcher for a company that sells X to Y in India.'
- C - Customer. Give the specific context: the prospect's title, company, industry, size, and the trigger or pain. Specific beats general every time.

- O - Objective. State the exact task in one sentence: write a cold email, build a list, handle this objection. One prompt, one job.
- P - Parameters. Set the constraints: word count, tone, format (table, email, script), and what not to do. This is what stops the rambling answer.
- E - Example or expectation. Tell it what good looks like, or give the structure you want. 'Under 120 words, four lines, end with one question.'

The prompts below already have all five parts filled in. Your job is to replace the [BRACKETED] parts with your own details. Do not send a prompt with the brackets still in it - the model will invent something to fill them, and invented details are exactly what gets you caught.

Chapter 5 - The variables you fill in every time

Keep these ten values handy. Most prompts below use at least three of them, and filling them in well is the difference between a generic answer and one you can send.

Variable	What to write	Example
YOUR COMPANY	Your company name and what it sells	Acme CRM, a sales-tracking tool
PRODUCT	The product or service you are selling	Acme CRM Pro plan
INDUSTRY	The prospect's industry	Logistics
TITLE	The prospect's job title	Head of Operations
COMPANY	The prospect's company	BlueDart Logistics
SIZE	Company size or revenue band	About 500 staff
PAIN	The problem they likely face	Manual route planning wastes hours
TRIGGER	A recent, true event to reference	Opened a new hub in Nagpur
ALTERNATIVE	What they use now	A spreadsheet
TIME	The relevant timeframe	Q4 2026

Chapter 6 - Five rules for safe AI in sales

These rules exist because AI makes it easy to do the wrong thing quickly. Break them and you damage your reputation, your company's domain, or your WhatsApp number - sometimes permanently.

- Verify every fact before you send it. AI invents company details, numbers, and roles with total confidence. Check names, figures, and claims against a real source. If you cannot verify it, cut it.
- Never fake a relationship. Do not let AI write 'as we discussed' or 'following up on our call' if no such conversation happened. It is the fastest way to lose trust.
- Respect consent, especially on WhatsApp. Meta requires opt-in before you message, and India's DPDP Act requires free, specific, informed consent. Messaging a number that has not agreed risks your account being restricted.
- Keep a human in the loop. Use AI to draft, never to decide. Read every message before it goes out, and never let it auto-send to a real prospect.
- Do not overstate what you can deliver. AI will happily promise a feature you do not have. Every claim in a proposal or email must be one you can stand behind.

Chapter 7 - The India channel playbook

In India, no single channel wins. The strongest sequences mix them, and the mix matters more than the message. Here is the honest picture, drawn from 2026 Indian outbound data.

Channel	Best for	Watch out for
Cold email	Reaching new accounts at scale; anything you want on record	Reply rates of 3-8% are normal; deliverability needs verified addresses and an authenticated domain
WhatsApp	Warm contacts and deal progression; moving a reply to a meeting fast	Meta requires opt-in; cold WhatsApp risks a permanent ban. Never use it for first contact
LinkedIn	Building familiarity before you pitch; light touches	Low penetration in Tier-2 and Tier-3 SMBs; do not pitch in the connection note
Phone	Signal-qualified prospects; high-value accounts	Time-consuming; DND and calling-hour rules apply to commercial calls

One number explains the whole strategy: warm WhatsApp messages reply at far higher rates than cold email, but only when the prospect already knows you. The sequence that works in India is cold email first, then LinkedIn or a call, then WhatsApp - and only once they have replied or opted in.

Signal-based outreach beats volume. Sequences triggered by a real event - a hiring surge, new funding, a new office, a technology change - consistently outperform generic cold sends. The 'why now' prompts in this playbook exist to give you that trigger.

Part 3 - The 60 Prompts

Grouped by the stage of the deal you are in. Replace every [BRACKETED] part with your own details before you run a prompt.

Part 3A - Prospecting and research (1-7)

1. Build a target account list from a segment brief

Use it when: You know your ideal customer but not which 30 companies to attack this week.

You are a B2B sales researcher for [YOUR COMPANY], which sells [PRODUCT] to [INDUSTRY] in India.
Build a list of 25 target companies matching this profile: [REVENUE BAND], [EMPLOYEE COUNT], [CITY OR REGION], and [A TRIGGER SUCH AS 'recently raised funding' or 'opened a new plant'].
For each, give: company name, city, what they do in one line, and the single strongest reason they might need [PRODUCT] now.
Rules: only real, well-known companies you are confident exist; if unsure, write 'verify' instead of inventing details. Return a table.

Pro tip: Never trust an AI-built list blindly. Spend 10 minutes verifying the top 5 on LinkedIn or the company site before you write a single email.

2. Company research brief in ten minutes

Use it when: You have a meeting or a cold email to write and no time to read the whole website.

Act as a sales researcher. I am selling [PRODUCT] to [COMPANY NAME] ([WEBSITE]).
Using only what is publicly known, give me a one-page brief: what the company does, its size and markets, its likely priorities this year, the three most relevant things about them for my pitch, and two questions I should ask to sound informed.
If you do not know a fact, say 'not confirmed' - do not guess. Keep it under 250 words.

Pro tip: Paste in a paragraph of the company's own 'About' page as context. The brief gets sharper and far less likely to hallucinate.

3. Find the 'why now' trigger

Use it when: Your prospect is a good fit but you have no reason to reach out this week.

You are a B2B sales strategist. For a company in [INDUSTRY] in India that matches this profile [BRIEF], list 10 buying triggers that would make them need [PRODUCT] in the next 90 days (for example: hiring surge, new funding, expansion, regulation change, leadership change).
For each trigger, give one sentence on how to reference it politely in a first email, and one line on how to verify it from public sources.

Pro tip: Triggers beat product pitches. A single, true, timely reason to call outperforms three paragraphs about your features.

4. Buyer persona map for your ICP

Use it when: You keep writing to the wrong person, or the same message to everyone.

I sell [PRODUCT] to [INDUSTRY] companies in India. Map the buying committee for a typical deal.
For each of these roles - the economic buyer, the user, the technical evaluator, and the blocker - give: their title range in an Indian [INDUSTRY] company, what they care about most, what worries them about buying, and the one line that wins them over.
Output as a four-row table.

Pro tip: Use this to write four versions of the same email - one per role - instead of one generic blast.

5. Competitor teardown for positioning

Use it when: The prospect already uses a competitor and you need an honest angle.

You are a competitive analyst. Compare [YOUR PRODUCT] with [COMPETITOR NAME] for a buyer in [INDUSTRY] in India.
Give me a fair table of: what each does best, typical pricing model, strengths, and honest weaknesses.
Then give three positioning statements I can use that are true and not disparaging.
Do not invent features or prices - mark anything unverified as 'confirm'.

Pro tip: Disparaging a competitor backfires in India's relationship-driven market. Lead with fit, not with what the other tool lacks.

6. Turn a news item into a sales angle

Use it when: You read something about a prospect and want to use it without sounding fake.

Here is a news item about [COMPANY]: [PASTE 2-3 SENTENCES].
Write a 60-word opening for a sales email that references this news naturally, connects it to a challenge [PRODUCT] solves, and ends with a soft question. Keep it warm and specific, not sycophantic. Do not overstate the connection.

Pro tip: Congratulations emails are everywhere. Reference the operational implication of the news instead - it shows you understand their business.

7. Score a lead against your ICP

Use it when: You have a list of leads and need to know who to call first.

You are a sales qualification analyst. Here is my ideal customer profile: [ICP DETAILS].
Here are 10 leads: [PASTE LIST].
Score each lead from 1 to 10 on fit, explain the score in one line, and flag any that look like a poor fit so I do not waste time. Return a table sorted by score, highest first.

Pro tip: Ask the model to also state its confidence. High-score, low-confidence leads are the ones worth a five-minute manual check.

Part 3B - Cold email (8-16)

8. First-touch cold email (B2B, India)

Use it when: You need a first email that gets replies, not just opens.

Write a cold email from [YOUR NAME] at [YOUR COMPANY] to [FIRST NAME], [TITLE] at [COMPANY], an Indian [INDUSTRY] company of about [SIZE].
Structure: one line on why them specifically, one line on the problem, one line on how [PRODUCT] helps (plain words, no jargon), and a small ask (a 15-minute call or permission to send one example). Under 120 words. No 'I hope this email finds you well'. End with one clear question.

Pro tip: The four-line structure in this prompt is the highest-performing cold email shape in Indian B2B. Keep it. Just change the specifics.

9. Cold email for a Tier-2 or Tier-3 city SMB

Use it when: Your prospect is a growing business outside the metros.

Write a cold email to the owner of a [TYPE OF BUSINESS] in [CITY] that has about [SIZE] staff.
Tone: direct, respectful, no corporate jargon. They are busy and mobile-first.
Open by naming a specific problem businesses like theirs face with [TOPIC]. Offer one concrete outcome [PRODUCT] delivers. Ask if they are open to a short call this week. Under 100 words.

Pro tip: Owners in smaller cities often read email on a phone. Short paragraphs, no attachments, and a WhatsApp number in your signature.

10. Cold email referencing a trigger event

Use it when: Something just changed at the prospect's company and you want to be timely.

Write a cold email to [FIRST NAME], [TITLE] at [COMPANY], which just [TRIGGER - e.g. raised a Series A / opened a new office / posted 5 sales jobs].
Open by acknowledging the event in one line, connect it to the pressure it creates, show how [PRODUCT] eases that pressure, and ask one question. Under 120 words. Warm, not pushy.

Pro tip: A trigger email sent within 48 hours of the event can triple reply rates versus a generic send. Speed matters more than polish.

11. Three-email cold sequence

Use it when: One email is not enough but you do not want to spam.

Write a 3-email cold sequence for [PROSPECT TYPE].
Email 1 (Day 1): specific problem and a clear ask.
Email 2 (Day 4): a new angle or a short relevant question - never 'just following up'.
Email 3 (Day 9): a final value-add and a polite close that leaves the door open.
Each under 100 words. Vary the opening line so they do not look templated.

Pro tip: Three well-written touches beat seven 'bumping this' emails. If there is nothing new to say, do not send the follow-up.

12. Subject line generator with ten variants

Use it when: Your emails get opened but not replied to, or not opened at all.

Generate 10 subject lines for a cold email to [TITLE] at an Indian [INDUSTRY] company about [PRODUCT]. Mix styles: question, benefit, curiosity, and personal. Keep each under 6 words, lowercase where natural, no clickbait, no ALL CAPS, no emojis. Add a one-line note on which type works best for a busy [TITLE] and why.

Pro tip: Pick the subject line that a stranger could read without knowing your product and still be curious. That is the one that opens.

13. Rewrite a cold email for deliverability

Use it when: Your open rates are low and you suspect spam filters.

Rewrite this cold email so it is more likely to land in the inbox: [PASTE EMAIL].
Remove spammy words and phrases, shorten sentences, cut links to one or zero, remove all-caps and excess punctuation, and keep the meaning. Show the rewrite and list the specific changes you made.

Pro tip: Deliverability is a data problem before it is a copy problem. Verified addresses and authenticated domains matter more than word choice.

14. The break-up email

Use it when: Three touches in and the prospect has gone quiet.

Write a short 'break-up' email to [FIRST NAME] at [COMPANY] after three unanswered messages. Tone: friendly, no guilt, no pressure. Say you will stop reaching out, restate the one benefit in a sentence, and leave the door open for whenever timing is better. Under 75 words.

Pro tip: Break-up emails often get the highest reply rate of any touch. Many prospects reply just to close the loop politely.

15. Referral-intro request email

Use it when: You want an introduction but do not want to be presumptuous.

Write a short email to [CONTACT NAME], who I know slightly through [CONTEXT]. Ask if they would introduce me to [TARGET NAME OR ROLE] at their company, in one or two sentences explaining why it would be useful to both sides. Make it easy to forward - include a two-line blurb they can paste. Under 90 words.

Pro tip: Always make the referral forwardable. Write the intro blurb yourself so your contact just has to press send.

16. Cold email in Hinglish

Use it when: Your prospect is more comfortable in Hindi-English mix than formal English.

Write a warm, professional cold email in natural Hinglish (Hindi written in English letters, mixed with English) to a [TITLE] at an Indian [INDUSTRY] business about [PRODUCT].
Keep it respectful and business-appropriate - no slang. Under 90 words. Then give an English version of the same email below it.

Pro tip: Hinglish works when it feels natural, not forced. If you would not say it out loud to the prospect, do not write it.

Part 3C - LinkedIn (17-21)

17. LinkedIn connection request note

Use it when: You want to connect without pitching in the note.

Write a LinkedIn connection request note (under 280 characters) to [NAME], [TITLE] at [COMPANY]. Reference something specific and true about their work, say why you would like to connect, and do not pitch. Warm and human.

Pro tip: The note is not the place for a pitch. Earn the connection first; the conversation comes after they accept.

18. LinkedIn follow-up message after connecting

Use it when: They accepted your request and you want to start a real conversation.

Write a LinkedIn message to [NAME] who just accepted my connection request. Thank them briefly, reference the specific reason I reached out, ask one easy, relevant question about their work, and stop there - no meeting request yet. Under 80 words.

Pro tip: Ask a question they will enjoy answering. A reply to a good question is worth more than a calendar link.

19. LinkedIn post that attracts buyers

Use it when: You want inbound interest from your target market.

Write a LinkedIn post for [YOUR ROLE] in [INDUSTRY] in India about [TOPIC]. Structure: a strong first line that stops the scroll, a short story or observation, three practical takeaways, and a question to invite comments. Under 200 words, plain language, no hashtag spam (max 3).

Pro tip: Posts that share one specific lesson from real work outperform generic advice. Specificity is the whole game.

20. Comment strategy for a prospect's post

Use it when: A prospect posted something and you want to be seen without pitching.

Here is a LinkedIn post by [PROSPECT NAME]: [PASTE POST]. Write three different comments I could leave: one that adds a useful insight, one that asks a thoughtful question, and one that shares a brief relevant experience. Each under 40 words. No pitching, no flattery.

Pro tip: A thoughtful comment is the cheapest way into a busy buyer's attention. Comment three or four times before you ever send a message.

21. Turn a case study into a LinkedIn carousel outline

Use it when: You have a win and want to repurpose it as content.

Here is a customer win: [PASTE DETAILS]. Turn it into an 8-slide LinkedIn carousel outline. For each slide give a headline and one supporting line. Slide 1 is the hook, slides 2-6 the story and result, slide 7 a takeaway, slide 8 a soft call to action. Keep numbers only if they are real.

Pro tip: Only publish numbers you can defend. One verifiable result beats three rounded-up ones.

Part 3D - WhatsApp, the compliant way (22-27)

22. Opt-in request message (DPDP-compliant)

Use it when: You have a lead's number and need their permission before you message.

Write a short WhatsApp message asking a customer to opt in to receive updates from [YOUR COMPANY]. State clearly who you are, what they will receive (for example order updates and occasional offers), and how to stop at any time. Under 50 words. Polite and clear.

Pro tip: Meta requires opt-in before you message, and India's DPDP Act requires free, specific, informed consent. Never message a number that has not agreed - it risks your whole account.

23. Warm WhatsApp follow-up after a cold email reply

Use it when: The prospect replied to your email and you want to move faster.

Write a WhatsApp message to [FIRST NAME] who replied to my email about [SUBJECT]. Reference the email by subject, keep it under 30 words, and ask for a specific 15-minute slot this week. Professional, no attachments, no pitch.

Pro tip: WhatsApp is for warm contacts only. Reply rates on warm WhatsApp messages run far above email - but cold WhatsApp risks a permanent ban.

24. WhatsApp message for an inbound lead

Use it when: Someone filled your form or messaged you first.

Write a WhatsApp reply to an inbound lead who enquired about [PRODUCT]. Thank them, confirm you have their details, ask one qualifying question, and offer to help. Under 45 words. Friendly and fast.

Pro tip: Speed wins inbound. The first business to respond well usually gets the meeting - aim to reply within minutes, not hours.

25. Meeting confirmation and reminder on WhatsApp

Use it when: A meeting is booked and you want fewer no-shows.

Write two short WhatsApp messages: (1) a confirmation sent right after the meeting is booked, and (2) a reminder sent the morning of the meeting. Both under 40 words. Include the day, time, and how to join. Warm and brief.

Pro tip: A same-day reminder cuts no-shows noticeably. Add the joining link so the prospect does not have to search for it.

26. Post-demo WhatsApp nudge

Use it when: You finished a demo and want to keep momentum.

Write a WhatsApp message to [FIRST NAME] after a demo today. Thank them for their time, summarise the one thing they cared about most, and say you are sending the proposal by email. Under 40 words. No pressure.

Pro tip: Summarising the prospect's own priority back to them proves you listened. It is the single most effective post-demo move.

27. Re-engagement WhatsApp for a dormant opted-in lead

Use it when: A lead opted in earlier, went quiet, and you want to restart without spamming.

Write a WhatsApp message to a lead who opted in but has not replied in [TIME]. Reference your last conversation, share one genuinely useful update or resource, and ask if now is a better time. Under 50 words. Easy to ignore, easy to reply.

Pro tip: Send one re-engagement message, not a drip. If there is no reply, move on and respect the silence.

Part 3E - Discovery and qualification (28-33)

28. Discovery call question set

Use it when: You are about to run a discovery call and want to ask the right things.

You are a sales coach. I sell [PRODUCT] to [INDUSTRY] in India. Write 15 discovery questions for a first call with a [TITLE]. Group them into: situation, problem, impact, and decision process. Make them open-ended and natural to ask. Add a one-line note on what a good answer sounds like for each.

Pro tip: Ask about impact in the prospect's own numbers - hours, rupees, risk. Impact you can quantify is impact you can price.

29. BANT / MEDDICC qualification summary

Use it when: You finished a call and need to know if this deal is real.

Here are my notes from a call: [PASTE NOTES].
Summarise the deal against this framework: Budget, Authority, Need, Timeline, plus the decision criteria and the next step. For each, say what we know and what is still unknown. End with an honest 1-10 forecast score and one line on the biggest risk.

Pro tip: The 'unknown' column is the valuable one. Most stalled deals die in the gaps nobody wrote down.

30. Pre-call research brief

Use it when: You have a call in 20 minutes and want to sound prepared.

I have a call with [NAME], [TITLE] at [COMPANY]. In under 200 words give me: what their company does, their likely priorities, two things they probably care about given their role, three questions to ask, and one risk to watch. Mark anything you are unsure about as 'verify'.

Pro tip: Read the brief, then close it. Sounding informed comes from two sharp questions, not from reciting facts.

31. Turn a call transcript into CRM notes

Use it when: You recorded a call and need clean notes fast.

Here is a call transcript: [PASTE TRANSCRIPT].
Write CRM-ready notes: a 3-line summary, the prospect's stated pains, any numbers or dates they mentioned, objections raised, agreed next steps with owners, and the deal stage. Keep it factual - do not add anything that is not in the transcript.

Pro tip: Never let AI invent a next step that was not agreed. Check the 'next steps' line against your memory before saving.

32. Pain-to-impact mapping

Use it when: The prospect named a problem but not what it costs them.

The prospect said their problem is: [PASTE QUOTE].
Map this to business impact for a [INDUSTRY] company of about [SIZE] in India. For each of cost, time, risk, and revenue, write one sentence on the likely impact and one question I can ask to quantify it with their own numbers. Do not invent statistics.

Pro tip: Quantify with their numbers, not yours. 'How many hours a week does your team spend on this?' beats any industry statistic.

33. Multi-stakeholder map

Use it when: More than one person is involved and you keep losing track.

For a deal selling [PRODUCT] to [COMPANY], map the buying committee. List each stakeholder role, what they want, what they fear, how they influence the decision, and the message that works for them. Return a table, then suggest who to meet next and why.

Pro tip: Champions do not close deals alone. Map the blocker early - the deal you lose is usually the one you never met.

Part 3F - Demo and proposal (34-38)

34. Demo script tailored to their pain

Use it when: You have a demo and want it to land, not just run long.

Build a 20-minute demo script for [PRODUCT] for a [TITLE] at [COMPANY] whose main pain is [PAIN]. Structure: 2-minute recap of their problem, three moments that show the fix, one moment that handles their likely objection, and a close with next steps. For each moment give what I show and the one line I say.

Pro tip: Show less, say more. Three sharp moments beat a full feature tour every time.

35. Proposal email

Use it when: You are sending a proposal and want it opened and read.

Write a short email to [NAME] sending the proposal for [PRODUCT]. In three lines: what we agreed their goal is, what the proposal covers, and the one next step (a review call on [DATE]). Attach the proposal. Under 90 words, warm and confident.

Pro tip: Send the proposal after a call, not cold. A proposal that lands with no context becomes a price comparison.

36. One-page proposal / SOW outline

Use it when: You need a clean one-page proposal fast.

Draft a one-page proposal for [PRODUCT] for [COMPANY]. Sections: their goal (in their words), what we will do, deliverables and timeline, what we need from them, pricing, and next step. Use placeholders for numbers. Plain language, no jargon. Keep it to what fits one page.

Pro tip: A one-page proposal gets read; a twelve-page one gets shelved. If they need detail, add an annexure after the decision.

37. ROI / business-case builder

Use it when: The buyer needs to justify the spend internally.

Help me build an ROI case for [PRODUCT] for [COMPANY]. Ask me for the inputs I need (their current cost or time on [PROCESS], our price, expected saving). Then calculate a simple 12-month ROI with clearly labelled assumptions. Present it so the buyer can forward it to their finance team.

Pro tip: Give the buyer the numbers in a form they can paste into their own template. You are arming your champion, not just selling.

38. Objection-proof value summary

Use it when: You want to pre-empt the objections before they are raised.

For a [TITLE] at an Indian [INDUSTRY] company considering [PRODUCT], list the five most likely objections and, for each, a one-line honest response that acknowledges the concern before answering it. Then write a short value summary that pre-empts two of them without sounding defensive.

Pro tip: Name the objection before they do. 'You might be wondering about implementation time' defuses the room.

Part 3G - Objection handling (39-44)

39. 'It is too expensive' response

Use it when: The prospect says the price is too high.

The prospect said [PRODUCT] is too expensive compared to [ALTERNATIVE OR BUDGET]. Write a response that: acknowledges the concern, reframes the cost against the value or cost of inaction, and offers a smaller starting option if it fits. Never apologise for the price. Under 120 words.

Pro tip: Do not discount on the first objection. Ask what they are comparing it to - often it is a different scope, not a different price.

40. 'We already use a competitor' response

Use it when: They have a tool already and think the conversation is over.

The prospect said they already use [COMPETITOR]. Write a response that respects their choice, asks one question about how well it is working for [SPECIFIC NEED], and positions [PRODUCT] as complementary or a fit for the gap. No criticism of the competitor. Under 100 words.

Pro tip: 'How is it working for X specifically?' is the whole play. It turns a dead end into a diagnosis.

41. 'Just send me an email / not now' response

Use it when: The prospect wants to end the call or push you off politely.

The prospect said '[SEND ME AN EMAIL]' or '[NOT RIGHT NOW]'. Write a warm response that agrees, asks one small clarifying question so the follow-up is useful, and secures a specific, low-pressure next step. Under 80 words. Do not push.

Pro tip: When someone says 'send an email', ask 'so it is relevant, which of these two problems is bigger for you?'. Then the email actually lands.

42. 'I need to check with my boss' response

Use it when: Your contact is not the decision-maker.

The prospect said they need to check with [MANAGER OR BOSS]. Write a response that offers to help build the internal case, asks what their boss cares about most, and suggests a short three-way call. Under 90 words. Supportive, never pushy.

Pro tip: Offer to write the summary their boss will read. It makes your contact look good and keeps you in control of the message.

43. 'Call me next quarter' response

Use it when: The prospect is stalling with a distant timeline.

The prospect asked me to call back next quarter. Write a response that agrees to the timing, agrees a specific date and reason for reconnecting, and leaves one piece of value in the meantime. Under 80 words. No pressure, no guilt.

Pro tip: Never leave 'next quarter' open. Pin a date and a reason now, or the deal quietly disappears.

44. Generic objection-handling generator

Use it when: You hit an objection you have not prepared for.

A prospect at [COMPANY] said: '[PASTE THE OBJECTION]'. You are selling [PRODUCT]. Give me three possible responses: one that asks a clarifying question, one that reframes the value, and one that acknowledges and defers. Each under 60 words and honest - do not claim anything we cannot deliver.

Pro tip: Most objections are a request for more information, not a no. Ask first, answer second.

Part 3H - Negotiation and closing (45-49)

45. Discount-request response

Use it when: The buyer asks for a discount and you want to hold value.

The buyer asked for a [X]% discount on [PRODUCT]. Write a response that does not simply agree, asks what they would commit to in return (longer term, case study, upfront payment, more seats), and offers a smaller concession tied to that. Under 100 words. Firm and warm.

Pro tip: Never trade price for nothing. Every rupee off should buy you something - a longer term, a referral, or a bigger scope.

46. Negotiation prep brief

Use it when: You have a negotiation call and want a plan.

Prepare me for a negotiation on [DEAL]. List: my target outcome, my walk-away point, the three things I want in return for any concession, the buyer's likely asks, and three questions to uncover their real constraints. Then give an opening line that frames the conversation collaboratively.

Pro tip: Write your walk-away number down before the call. Knowing your floor is what stops you giving away margin under pressure.

47. Closing email with honest urgency

Use it when: The deal is close and you want a real reason to decide now.

Write a closing email to [NAME] for [PRODUCT]. Give one honest, specific reason to decide this [MONTH OR QUARTER] - for example a price lock, an implementation slot, or a deadline that matters to them. Never invent fake scarcity. Include the exact next step. Under 100 words.

Pro tip: Real urgency comes from their calendar, not yours. Tie the deadline to something they already care about.

48. Mutual action plan / close plan

Use it when: The deal is agreed in principle but the steps are vague.

Build a mutual action plan for closing [PRODUCT] with [COMPANY] by [TARGET DATE]. List every step from now to go-live, who owns each, and the date. Include their steps (legal, IT, approvals) and ours. Return it as a simple table I can share with the buyer.

Pro tip: A shared close plan turns a vague 'yes' into a dated sequence. It also surfaces the steps that will actually delay you.

49. Procurement / vendor-form response

Use it when: You reached procurement and hit paperwork and questions.

Help me respond to a procurement team at [COMPANY] buying [PRODUCT]. They asked about [COMPLIANCE, DATA, GST, PAYMENT TERMS - list]. Draft short, clear answers I can adapt, flagging any point I should confirm with legal or finance before sending. Do not state a policy we have not agreed.

Pro tip: Never let AI answer a compliance question on your behalf. Draft it, then have a human confirm every claim before it is sent.

Part 3I - Follow-up and re-engagement (50-54)

50. Post-meeting follow-up email

Use it when: You finished a good meeting and want to keep the deal moving.

Write a follow-up email after a meeting with [NAME] at [COMPANY]. Recap the three main points they raised, confirm the agreed next steps with dates, and attach anything promised. Warm, under 120 words, one clear next action.

Pro tip: Send it the same day. A same-day recap with clear owners is the most reliable way to keep a deal on track.

51. Value-add follow-up (no reply yet)

Use it when: You have followed up once and do not want to nag.

Write a follow-up to [NAME] who has not replied. Do not say 'just following up'. Instead lead with one new, genuinely useful thing - a relevant insight, a short example, or a resource - then a one-line question. Under 90 words.

Pro tip: Every follow-up should carry new value. If it only reminds them you exist, it is noise.

52. Re-engagement after 90 days

Use it when: A deal went cold months ago and you want to reopen it.

Write a re-engagement email to [NAME] at [COMPANY], whose deal went quiet about 90 days ago. Reference your last conversation, share one update that is genuinely relevant to them, and ask if priorities have changed. Under 90 words. Low pressure, easy to reply.

Pro tip: Reference the last conversation specifically. Generic 'checking in' emails after 90 days get deleted.

53. Referral to another department

Use it when: This deal is dead but the relationship is good.

The prospect at [COMPANY] said no because [REASON]. Write an email that thanks them, accepts the decision gracefully, and asks if they can point me to the right person for [ADJACENT NEED] or in a different team. Make it easy to refer. Under 80 words.

Pro tip: A graceful no is an opening. The fastest new deal is often in the department next door.

54. Win-back email after a lost deal

Use it when: You lost a deal and want to reopen it later.

Write a win-back email to [NAME] who chose [COMPETITOR] about [TIME] ago. Ask how the implementation went, offer one new capability or update relevant to them, and suggest a brief catch-up. No gloating, no criticism of the competitor. Under 90 words.

Pro tip: Wait long enough that the honeymoon is over, then ask a genuine question. 'How did it go?' reopens more lost deals than any pitch.

Part 3J - Account management and upsell (55-57)

55. Quarterly business review outline

Use it when: You have a QBR coming up and want it to earn the next renewal.

Build a quarterly business review outline for [CLIENT]. Sections: what we set out to achieve, the results so far (use placeholders for real numbers), what we learned, what we recommend next, and the ask. Keep it to 8 slides. Make it about their outcomes, not our features.

Pro tip: A QBR that only reports activity is a wasted meeting. Tie every result to a goal the client named.

56. Upsell / cross-sell email based on usage

Use it when: A client is getting value and is ready for the next thing.

Write an email to [CLIENT CONTACT] suggesting [UPGRADE OR ADD-ON]. Reference how they are already using [PRODUCT] (use placeholder details), connect it to one specific benefit of the next tier, and propose a short call. Under 100 words. Helpful, not salesy.

Pro tip: Upsell at the moment of a win, not at renewal. Value delivered today is the best argument for the next tier.

57. Renewal-risk check-in

Use it when: A client has gone quiet and renewal is approaching.

A client [CLIENT] has gone quiet and their renewal is in [TIME]. Draft a check-in message that asks how things are going, surfaces any unmet expectations, and offers a short call. Friendly, not anxious. Under 90 words. Include one open question about their results.

Pro tip: Ask about results before you mention renewal. If there is a problem, you want to hear it now, not at renewal.

Part 3K - CRM, reporting and enablement (58-60)

58. Weekly pipeline review summary

Use it when: You need a clean pipeline summary for your manager or team.

Here are my deals this week: [PASTE LIST WITH STAGE, VALUE, NEXT STEP, LAST TOUCH].
Write a pipeline summary: total pipeline, deals that moved, deals at risk, deals stuck over 21 days, and my top three priorities for next week with a reason for each. Keep it factual.

Pro tip: The deals stuck over 21 days are the ones that need attention. Everything else is noise.

59. Forecast commentary

Use it when: You need to explain your forecast honestly.

Here is my forecast data: [PASTE DEALS, VALUE, PROBABILITY, CLOSE DATE].
Write a short forecast commentary: what I expect to close this period, the deals I am confident about and why, the ones at risk and why, and what I need help with. Do not overstate. Flag every assumption.

Pro tip: A forecast that is always right is a forecast nobody trusts. Flag your risk early and you keep credibility.

60. Role-play coach for objection practice

Use it when: You want to rehearse before a real call.

You are a tough but fair buyer at an Indian [INDUSTRY] company. I am selling [PRODUCT]. Start by playing the buyer and raise one objection at a time in [HINDI OR ENGLISH]. After each of my responses, pause and give me one line of feedback on what worked and what to improve. Go one round at a time.

Pro tip: Rehearsing three objections out loud beats reading a list. Your delivery is the part you cannot wing.

The 30-day adoption plan

Do not try to use all 60 prompts at once. Pick one group a week, run it for real, and keep only what works. This is the plan that turns a PDF into a habit.

Week 1 - Research and targeting (prompts 1-7, 28, 30, 33)

- Build one clean target list of 25 accounts for a single segment.
- Write a pre-call research brief for every meeting you have this week.
- Map the buying committee for your two biggest open deals.
- Check your work: are the facts in every brief verified, or did you trust the model?

Week 2 - First contact (prompts 8-21)

- Write one cold email and one three-email sequence, and send them.
- Set up a compliant opt-in message for WhatsApp; do not message anyone cold.
- Draft two LinkedIn posts and leave three thoughtful comments on prospect posts.
- Track replies by channel, not by message. The channel tells you where to spend next week.

Week 3 - Conversations (prompts 22-38, 50)

- Run discovery calls with the question set and summarise each against the qualification framework.
- Turn every call transcript into CRM notes the same day.
- Build one ROI case for the deal that needs the most internal justification.
- Send a same-day follow-up after every meeting.

Week 4 - Closing and system (prompts 39-60)

- Rehearse the three objections you hear most, using the role-play prompt.
- Prepare a mutual action plan for any deal that has said yes in principle.
- Write your weekly pipeline summary and forecast commentary from real data.
- Review the month honestly: which five prompts earned their place in your routine?

The prompt quality checklist

Before you use any prompt's output, run it through this five-point check. It takes thirty seconds and prevents the mistakes that cost deals.

- Is every fact true and verifiable? Check names, numbers, and claims.
- Would I be comfortable if the prospect read this and knew AI wrote the first draft?
- Have I removed every [BRACKETED] placeholder and every invented detail?
- Is it short enough? If it is longer than you would say out loud, cut it.
- Does it end with a clear, single next step or question?

Using these prompts in Hinglish and regional languages

Many Indian prospects reply faster to natural Hinglish than to formal English, and some prefer a regional language entirely. The prompts work in any of them - add a line like 'Write the reply in natural Hinglish' or 'Reply in Marathi' and the model will follow.

Two cautions. First, read every Hinglish draft out loud. If it does not sound like how you actually speak to a client, it will feel forced and do more harm than good. Second, keep formal documents - proposals, contracts, quotations - in clear English, whatever the conversation language. Warmth belongs in the chat; precision belongs in the paperwork.

Glossary

Ten mistakes that get Indian sellers caught using AI

Every one of these is common, and every one costs a deal or a reputation. Read them once and you will avoid most of the damage AI can do in a sales week.

- Sending invented facts. The model states a company's revenue or a prospect's role with total confidence, and it is wrong. Verify names, numbers, and claims before anything leaves your outbox.
- Faking a relationship. 'As we discussed' when you never spoke is the fastest way to be marked as spam. Only reference conversations that actually happened.
- Messaging cold on WhatsApp. Meta requires opt-in, and India's DPDP Act requires informed consent. A cold WhatsApp blast can get your business number restricted or banned.
- One message for everyone. The same email to a founder and a procurement head reads as generic and gets ignored. Use the persona map to write the version each person needs.
- Letting it promise what you cannot deliver. AI will happily invent a feature or a timeline. Every claim in a proposal must be one you can stand behind.
- Pitching in a LinkedIn connection note. The note is not the pitch. Earn the connection, then start a real conversation.
- Trusting a forecast it wrote. AI does not know your deals. It can format your forecast, but the probability on each line must be your judgement.
- Answering compliance questions with AI. Never let a model state your data, GST, or legal position. Draft, then have a human confirm every word.
- Dropping the Hinglish test. If a Hinglish draft does not sound like how you actually speak to a client, it will feel forced and do more harm than good. Read it out loud.
- Automating the human moment. AI can draft the follow-up; it cannot read the room on a call. Keep your judgement for the conversation and let AI handle the paperwork.

The five numbers to watch every week

AI should make you measurably better, not just faster. Track these five numbers for a month and you will know whether your prompts are working.

Appendix A - The 60-prompt index

Every prompt in this playbook, by number and stage. Use it as a quick map when you know the job you have to do.

#	Prompt	Stage
1	Build a target account list from a segment brief	Prospecting and research
2	Company research brief in ten minutes	Prospecting and research
3	Find the 'why now' trigger	Prospecting and research
4	Buyer persona map for your ICP	Prospecting and research
5	Competitor teardown for positioning	Prospecting and research
6	Turn a news item into a sales angle	Prospecting and research
7	Score a lead against your ICP	Prospecting and research
8	First-touch cold email (B2B, India)	Cold email
9	Cold email for a Tier-2 or Tier-3 city SMB	Cold email
10	Cold email referencing a trigger event	Cold email
11	Three-email cold sequence	Cold email
12	Subject line generator with ten variants	Cold email
13	Rewrite a cold email for deliverability	Cold email
14	The break-up email	Cold email
15	Referral-intro request email	Cold email
16	Cold email in Hinglish	Cold email
17	LinkedIn connection request note	LinkedIn
18	LinkedIn follow-up message after connecting	LinkedIn
19	LinkedIn post that attracts buyers	LinkedIn
20	Comment strategy for a prospect's post	LinkedIn
21	Turn a case study into a LinkedIn carousel outline	LinkedIn
22	Opt-in request message (DPDP-compliant)	WhatsApp (compliant)
23	Warm WhatsApp follow-up after a cold email reply	WhatsApp (compliant)
24	WhatsApp message for an inbound lead	WhatsApp (compliant)
25	Meeting confirmation and reminder on WhatsApp	WhatsApp (compliant)
26	Post-demo WhatsApp nudge	WhatsApp (compliant)
27	Re-engagement WhatsApp for a dormant opted-in lead	WhatsApp (compliant)
28	Discovery call question set	Discovery and qualification
29	BANT / MEDDICC qualification summary	Discovery and qualification
30	Pre-call research brief	Discovery and qualification
31	Turn a call transcript into CRM notes	Discovery and qualification
32	Pain-to-impact mapping	Discovery and qualification

#	Prompt	Stage
33	Multi-stakeholder map	Discovery and qualification
34	Demo script tailored to their pain	Demo and proposal
35	Proposal email	Demo and proposal
36	One-page proposal / SOW outline	Demo and proposal
37	ROI / business-case builder	Demo and proposal
38	Objection-proof value summary	Demo and proposal
39	'It is too expensive' response	Objection handling
40	'We already use a competitor' response	Objection handling
41	'Just send me an email / not now' response	Objection handling
42	'I need to check with my boss' response	Objection handling
43	'Call me next quarter' response	Objection handling
44	Generic objection-handling generator	Objection handling
45	Discount-request response	Negotiation and closing
46	Negotiation prep brief	Negotiation and closing
47	Closing email with honest urgency	Negotiation and closing
48	Mutual action plan / close plan	Negotiation and closing
49	Procurement / vendor-form response	Negotiation and closing
50	Post-meeting follow-up email	Follow-up and re-engagement
51	Value-add follow-up (no reply yet)	Follow-up and re-engagement
52	Re-engagement after 90 days	Follow-up and re-engagement
53	Referral to another department	Follow-up and re-engagement
54	Win-back email after a lost deal	Follow-up and re-engagement
55	Quarterly business review outline	Account management and upsell
56	Upsell / cross-sell email based on usage	Account management and upsell
57	Renewal-risk check-in	Account management and upsell
58	Weekly pipeline review summary	CRM, reporting and enablement
59	Forecast commentary	CRM, reporting and enablement
60	Role-play coach for objection practice	CRM, reporting and enablement

Appendix B - Fill-in templates

Three skeletons to keep beside the prompts. Fill the brackets, run the matching prompt, and paste the result over the skeleton.

Cold email skeleton (under 120 words)

- Line 1 - Why them: a specific, true detail about [COMPANY] or their situation.
- Line 2 - The problem: the one challenge you believe they face with [TOPIC].
- Line 3 - How you help: one plain sentence on what [PRODUCT] does for them.
- Line 4 - The ask: a 15-minute call, or permission to send one example.

WhatsApp opt-in skeleton

- Who you are: name your business clearly.
- What they will get: for example order updates and occasional offers.
- How to stop: tell them they can reply STOP at any time.

Same-day follow-up skeleton

- Recap: the two or three points the prospect raised.
- Confirm: the next steps, with a date and an owner for each.
- Attach: anything you promised in the meeting.
- One next action: the single thing that happens next.

A closing word

The sellers who win with AI in India in 2026 will not be the ones with the most tools or the longest prompt list. They will be the ones who use a handful of prompts honestly, every week, and keep their own judgement for the moments that actually close a deal. Pick five prompts from this playbook, run them for real, and let the results decide which stay. That is the whole method.

Sources

Every statistic in this playbook comes from a named, public source, current as of October 2026.

- Salesforce, State of Sales 2026 - India press release (3 March 2026) and the State of Sales India blog (17 June 2026). Survey of 4,050 sales professionals globally, including 250 in India, conducted August-September 2025.
- TaskVeda, India Student Search Report 2026 (3 October 2026) - search demand and conversion by theme, Google Search Console data, April-October 2026.
- Meta for Developers, WhatsApp Business messaging policy and opt-in requirements, and the WhatsApp Business Messaging Policy (updated 23 September 2026).
- India's Digital Personal Data Protection Act, 2023 - consent requirements for business messaging.
- India B2B outbound channel data: CrossNibble (2026) on warm WhatsApp reply rates; Smartlead (2026) on hybrid AI-plus-human reply rates; Hunter.io State of Cold Email (2026) on cold-email averages; PeakAI (October 2026) on Indian outbound sequencing.
- Meta and industry India figures on WhatsApp scale and pricing as published in 2026.

This playbook is educational guidance for sales professionals. It is not legal advice. For compliance questions about WhatsApp, DPDP, DLT, or DND rules, confirm the current position with your legal or compliance team.
